QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains three VLANs. The VLANs are configured as shown in the following table.

VLAN ID	Contents	Routing enabled to
1	Client computers	VLAN 2
2	• Application servers • Domain controllers • Network Policy Service (NPS) servers	VLAN 1 and the Internet
3	Windows Server Update Services (WSUS) server	Nowhere

All client computers run either Windows 7 or Windows 8.

The corporate security policy states that all of the client computers must have the latest security updates installed.

You need to implement a solution to ensure that only the client computers that have all of the required security updates installed can connect to VLAN 1. The solution must ensure that all other client computers connect to VLAN 3.

Which Network Access Protection (NAP) enforcement method should you implement?

A. VPN

B. DHCP

C. IPsec

D. 802.1x

Correct Answer: D

The most common method of the list is 802.1x for a variety of reasons. First, the industry has been selling 802.1x network authentication for the last 10 years. 1x gained tremendous popularity as wireless networking became prevalent in the late 90\\'s and early 2000\\'s and has been proven to be a viable solution to identifying assets and users on your network. For customers that have invested in 802.1x capable switches and access points, NAP can very easily be implemented to complement what is already in place. The Network Policy Server (NPS) role Windows Server 2008 has been dramatically improved to make 802.1x policy creation much simpler to do.

QUESTION 2

Your network contains an Active Directory forest named contoso.com. The forest contains five domains. You need to ensure that the CountryCode attribute is replicated to the global catalog.

What should you do?

A. Modify the schema partition.

B. Create and modify an application partition.

C. Modify the configuration partition.

D. Modify the domain partitions.

Correct Answer: A

Directory Partition Subtrees

Every domain controller contains the following three directory partitions:

*

 Schema Contains the Schema container, which stores class and attribute definitions for all existing and possible Active Directory objects in cn=schema,cn=configuration,dc= forestRootDomain . Updates to this container are replicated to all domain controllers in the forest. You can view the contents of the Schema container in the Active Directory Schema console.

*

 Configuration

*

 Domain

QUESTION 3

Your company has a main office.

The network contains an Active Directory domain named contoso.com. The main office contains a server named Server1 that runs Windows Server 2012 R2. Server1 has the Remote Access server role installed and is configured to accept

incoming SSTP-based VPN connections.

All client computers run Windows 10.

The company plans to open a temporary office that will contain a server named Server2 that runs Windows Server 2012 R2 and has the DHCP Server server role installed. The office will also have 50 client computers and an Internet

connection.

You need to recommend a solution to provide the users in the temporary office with access to the resources in the main office.

What should you recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

A. Use the Connection Manager Administration Kit (CMAK) to create a connection package that specifies Server1 as the target for SSTP-based VPN connections. Manually distribute the CMAK package to each client computer in the temporary office.

B. Install the Remote Access server role on Server2. From Routing and Remote Access on Server2, add a SSTP-based VPN port. From DHCP on Server2, configure the default gateway server option.

C. Use the Connection Manager Administration Kit (CMAK) to create a connection package that specifies Server1 as

the target for SSTP-based VPN connections. Use a Group Policy object (GPO) to distribute the CMAK package to each client computer in the temporary office.

D. Install the Remote Access server role on Server2. From Routing and Remote Access on Server2, configure a demand-dial interface. From DHCP on Server2, configure the default gateway server option.

Correct Answer: C

SSTP cannot be used for site-to-site VPNs (with Windows Server 2012). You will therefore need to configure the clients to connect.

QUESTION 4

Your network contains an Active Directory forest named contoso.com. The forest functional level is Windows Server 2012 R2.

The forest contains an Active Directory domain. The domain contains a global security group named GPO_Admins that is responsible for managing Group Policies in the forest.

A second forest named fabrikam.com contains three domains. The forest functional level is Windows Server 2008 R2.

You need to design a trust infrastructure to ensure that the GPO_Admins group can create, edit, and link Group Policies in every domain of the fabrikam.com forest.

What should you include in the design?

More than one answer choice may achieve the goal. Select the BEST answer.

A. A two-way forest trust

B. A one-way forest trust

C. Three external trusts

D. Three shortcut trusts

Correct Answer: B

QUESTION 5

Your network contains multiple locations. The physical topology of the network is configured as shown in the exhibit. (Click the Exhibit button.)

You plan to deploy an Active Directory domain named adatum.com. Each location will contain several domain controllers.

You also plan to deploy 500 client computers that run Windows 8 in each location.

You need to recommend a site topology for the planned deployment.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

A. five sites and three site links

B. three sites and five site links

C. three sites and one site link

D. five sites and five site links.

Correct Answer: A
