QUESTION 1

Your network contains five servers that run Windows Server 2012 R2.

You install the Hyper-V server role on the servers. You create an external virtual network switch on each server.

You plan to deploy five virtual machines to each Hyper-V server. Each virtual machine will have a virtual network adapter that is connected to the external virtual network switch and that has a VLAN identifier of 1.

Each virtual machine will run Windows Server 2012 R2. All of the virtual machines will run the identical web application.

You plan to install the Network Load Balancing (NLB) feature on each virtual machine and join each virtual machine to an NLB cluster. The cluster will be configured to use unicast only.

You need to ensure that the NLB feature can distribute connections across all of the virtual machines.

Solution: From the properties of each virtual machine, you add a second virtual network adapter. You connect the new virtual network adapters to the external virtual network switch and configure the new virtual network adapters to use a

VLAN identifier of 2.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 2

You need to configure access to the Certificate Revocation Lists (CRLs).

How should you configure the access? To answer, drag the appropriate protocol or servers to the correct network type. Each protocol or server may be used once, more than once, or not at all. You may

need to drag the split bar between panes or scroll to view content.

Select and Place:

Protocols and Servers

HTTP

HTTPS

DETROOTCA

DETCOA01 and CHICA01

DETCRL01 and CHICRL01

Answer Area

Network type	Protocol	Server or servers
Internet	Protocol or Server	Protocol or Server
Internal network	Protocol or Server	Protocol or Server

Correct Answer:

Protocols and Servers

HTTP

HTTPS

DETROOTCA

DETCOA01 and CHICA01

DETCRL01 and CHICRL01

Answer Area

Network type	Protocol	Server or servers
Internet	HTTP	DETCOA01 and CHICA01
Internal network	HTTP	DETCOA01 and CHICA01

QUESTION 3

Your company has four offices. The offices are located in Montreal, Seattle, New York, and Miami.

Users access all of the web-based resources by using web proxy servers. The IP addresses of the web proxies at each office are configured as shown in the following table.

Office	Web proxy IP
Montreal	10.10.1.2
	10.10.1.3
	10.10.1.4
Seattle	10.10.2.2
	10.10.2.3
	10.10.2.4
New York	10.10.3.2
	10.10.3.3
	10.10.3.4
Miami	10.10.4.2
	10.10.4.3
	10.10.4.4

The connections to the web proxies are balanced by using round-robin DNS.

The company plans to deploy a new application. The new application has a farm of frontend web servers that connect to a back-end application server. When a session to a web server is established,

the web server stores data until the session closes. Once the session closes, the data is sent to the application server.

You need to ensure that the incoming sessions to the web server farm are distributed among the web servers. The solution must ensure that if a web server fails, the users are NOT directed to the failed

server.

How should you configure the port rule? To answer, select the appropriate options in the answer area.

Affinity:

**QUESTION 4**

You need to deploy the dedicated storage servers to support the new web application servers. What should you do?

- A. Install Windows Storage Server 2012 R2 Standard on STORAGE1 and STORAGE2. Use STORAGE1 and STORAGE2 as iSCSI target servers.
- B. Install Windows Storage Server 2012 R2 Standard on STORAGE1 and STORAGE2. Use STORAGE1 and STORAGE2 as scale-out file servers.
- C. Install Windows Storage Server 2012 R2 Workgroup on STORAGE1 and STORAGE2. Use STORAGE1 and STORAGE2 as scale-out file servers.
- D. Install Windows Storage Server 2012 R2 Workgroup on STORAGE1 and STORAGE2. Use STORAGE1 and STORAGE2 as iSCSI target servers.

Correct Answer: A

QUESTION 5

Your network contains an Active Directory domain named contoso.com.

You currently have an intranet web site that is hosted by two Web servers named Web1 and Web2. Web1 and Web2 run Windows Server 2012.

Users use the name intranet.contoso.com to request the web site and use DNS round robin.

You plan to implement the Network Load Balancing (NLB) feature on Web1 and Web2.

You need to recommend changes to the DNS records for the planned implementation.

What should you recommend?

- A. Create a service locator (SRV) record for each Web server.

- B. Create one alias (CNAME) record named Intranet. Map the CNAME record to Intranet.
- C. Delete one of the host (A) records named Intranet. Modify the remaining host (A) named Intranet.
- D. Create a new host (A) record named Intranet. Remove both host (A) records for Web1 and Web2.

Correct Answer: C
