QUESTION 1

Your network contains a server named Server1 that runs Windows Server 2012.

You plan to deploy Windows 8 to 200 client computers to meet the following requirements:

Ten executive users must be able to use an application named App1. Other users must not be able to use App1.

All users must be able to use Microsoft Office 2010 when their client computer is disconnected from the network.

The solution must ensure that the amount of hard disk space used to store the images of Windows 8 is minimized.

You need to recommend an image deployment solution that meets the requirements of the planned deployment.

Which solution should you recommend?

A. Deploy an image of Windows 8. Deploy Office 2010 by using Microsoft Application Virtualization (App- V). Deploy App1 by using Group Policy Software Installation.

B. Deploy an image of Windows 8 that contains Office 2010. Deploy App1 by using Group Policy Software Installation.

C. Deploy an image of Windows 8 that contains Office 2010. Deploy an image of Windows 8 that contains Office 2010 and App1.

D. Deploy an image of Windows 8. Deploy App1 and Office 2010 as RemoteApp programs.

Correct Answer: A

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that have the Windows Deployment Services server role installed. Server1 is located on the same network

segment as the client computers. Server2 is a standalone Windows Deployment Services (WDS) server that is used for testing. Server2 is located on a different network segment than the client computers.

You add a new image of Windows 8 named TestImage to Server2. You plan to deploy the image to several test client computers.

You need to ensure that when the test client computers start, they connect automatically to WDS on Server2.

What should you use to start the client computers?

A. The Windows 8 installation media

B. PXE

C. A discover image

D. A boot image

Correct Answer: C

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The network contains two servers named Server1 and Server2 that run Windows Server 2012. Server1 has the Remote Desktop Visualization Host role service installed.

Server2 has the Remote Desktop Web Access role service installed.

The network contains a Virtual Desktop Infrastructure (VDI).

You plan to use an existing virtual machine as the new pooled virtual desktop base image for Standard Deployment.

The virtual machine has the following configurations:

Uses a static IP address

Is a member of a workgroup

Runs the Windows 8 operation system

You need to ensure that you can use the virtual machine as the template virtual machine for the VDI deployment. What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

A. Connect the virtual machine to the Remote Desktop Services (RDS) virtual network.

B. Run sysprep.exe on the virtual machine.

C. Join the virtual machine to the domain.

D. On the virtual machine, import a Secure Sockets Layer (SSL) certificate.

E. On Server1, import a Secure Sockets Layer (SSL) certificate.

Correct Answer: AB

QUESTION 4

You need to create an operating system image for the deployment of Windows 8. The solution must meet the technical requirements. What should you create?

A. A script that runs the WIM2VHD utility

B. A stand-alone media task sequence

C. A capture media task sequence

D. A build and capture task sequence

Correct Answer: C

QUESTION 5

Your network contains an Active Directory domain named contoso.com.

You plan to implement Encrypting File System (EFS) to encrypt data on the client computer of each user.

You need to prevent EFS from generating self-signed certificates.

What should you use in Group Policy Management Editor?

To answer, select the appropriate Group Policy setting in the answer area.

Hot Area:

Correct Answer:

Group Policy Management Ed...
