QUESTION 1

Your network contains an Active Directory domain named contoso.com. All client computers run Windows 7.

You plan to upgrade all of the client computers to Windows 8.

You install the Microsoft Application Compatibility Toolkit (ACT) on a server named Server1.

You configure Server1 to host the Log Processing Service shared folder,

You need to recommend which permissions must be assigned to the Log Processing Service shared folder. The solution must provide the least amount of permissions to the shared folder.

Which permissions should you recommend assigning to the Everyone group on the shared folder? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Write NTFS permissions
- B. Read NTFS permissions
- C. Change Share permissions
- D. Read NTFS permissions and Execute NTFS permissions
- E. Read Share permissions

Correct Answer: ACE

<http://technet.microsoft.com/en-us/library/hh824812.aspx> The Everyone group must have Change and Read permissions to the ACT LPS share. The Everyone group must have Write access to the ACT LPS share.

QUESTION 2

Your network contains an Active Directory domain. The domain contains servers that run Windows Server 2012 and client computers that run Windows 8.

You have three applications named App1, App2, and App3. App1 and App2 can run on Windows 8. App3 can run only on Windows XP.

You need to recommend application deployment solutions that meet the following requirements:

App1 must be installed on all of the client computers in the domain automatically when the client computers restart.

App2 must be installed only when a user executes a .xyz file. App3 must be available on all of the client computers.

Which application deployment solution should you recommend for each application? To answer, drag the appropriate solution to the correct application in the answer area. Each solution may be used once, more than once, or not at all.

Additionally, you may need to drag the split bar between panes or scroll to view content.

Select and Place:

Solutions	Answer Area
Assign the application by using a Group Policy.	App1 Solution
Publish the application by using a Group Policy.	App2 Solution
Publish the application as a RemoteApp program.	App3 Solution
Deploy the application on a virtual machine on each client computer.	

Correct Answer:

Solutions	Answer Area
	App1 Assign the application by using a Group Policy.
	App2 Publish the application by using a Group Policy.
Publish the application as a RemoteApp program.	App3 Deploy the application on a virtual machine on each client computer.

QUESTION 3

Your network contains servers that run Windows Server 2012 and client computers that run Windows 8.

The client computers are installed as virtual machines by using a VHD OS image named Image.vhdx. A line-of-business application named App1 is installed in Image.vhdx by using Microsoft Windows Installer.

A new patch named Update.msp is available for App1.

You need to ensure that all newly created virtual machines have the latest version of App1 installed.

What should you do first? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Assign Update.msp to the virtual machines by using a Group Policy object (GPO).
- B. Run dism.exe and specify the /online parameter.
- C. Configure a physical computer to start from Image.vhdx.
- D. Create a new virtual machine by using Image.vhdx.

Correct Answer: D

QUESTION 4

You have a server named Server1 that runs Windows Server 2012. Server1 has the Remote Desktop Session Host role service installed.

You need to deploy an application named App1 to Server1. The deployment must ensure that hundreds of Remote Desktop Services (RDS) clients can access App1.

Which three actions should you perform? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Install App1 on Server1.	
Run change.exe user /execute.	
Run change.exe user /query.	
Run change.exe user /install.	
Run change.exe logon /disable.	
Run change.exe logon /enable.	

Correct Answer:

Actions	Answer Area
	Run change.exe user /install.
	Install App1 on Server1.
Run change.exe user /query.	Run change.exe user /execute.
Run change.exe logon /disable.	
Run change.exe logon /enable.	

Box 1: Run change.exe user /install

To install an end-user application on an RD Session Host server, the RD Session Host server must first be switched into a special install mode called RD-Install to ensure that the application will be able to run in a multi-user environment.

Box 2: Install App1 on Server.

Box 3: Run change.exe user /execute

After your applications have been installed on your RD Session Host server, you must switch the server back into execution mode (RD-Execute) before users can remotely connect to your server. You can switch between the install and

execute modes from the command line using these commands:

change user /install

change user /execute

Reference: Technet, Learn How To Install Applications on an RD Session Host Server

QUESTION 5

You need to recommend a solution to deliver the virtualized applications to the client computers. The solution must meet the application requirements.

What should you include in the recommendation?

- A. Enhanced Storage
- B. BranchCache
- C. File Replication Service (FRS)
- D. Distributed File System (DFS)

Correct Answer: D
