QUESTION 1

Your network contains an Active Directory domain named contoso.com.

You plan to deploy a Microsoft Application Virtualization (App-V) 5.0 infrastructure.

You need to recommend a solution to manage the App-V client settings.

What should you include in the recommendation?

- A. Deploy Microsoft System Center 2012 App Controller, and then deploy a service template.
- B. Deploy Microsoft System Center 2012 Virtual Machine Manager (VMM), and then deploy a service template.
- C. Copy Appxpackagemanager.admx and Appxpackagemanager.adml to a domain controller, and then create a Group Policy object (GPO).
- D. Copy Appv.admx and Appv.adml to a domain controller, and then create a Group Policy object (GPO).

Correct Answer: D

QUESTION 2

You need to recommend a solution for deploying the Office 2010 add-ins. The solution must meet the application requirements. What should you include in the recommendation?

- A. From Server Manager, create a collection.
- B. From Group Policy Management, assign the add-ins to users.
- C. From Group Policy Management, assign add-in to client computers.
- D. From the Application Virtualization Management Console, create a connection group.

Correct Answer: D

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains four servers named Server1, Server2, Server3, and Server4. The domain contains a RemoteApp farm.

You install the Remote Desktop Connection Broker role service on Server1 and Server2. You need to recommend a Remote Desktop solution to ensure that users can reconnect to existing sessions if a single server fails.

What should you recommend deploying on Server3 and Server4? To answer, drag the appropriate software to the correct server in the answer area. Each software may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

Select and Place:

Correct Answer:

Server3 Box 1: Microsoft SQL Server 2012 Box 2: Failover clustering Server4 Box 1: Microsoft SQL Server 2012 Box 2: Failover clustering

Note:

* One requirement for RD Connection Broker high availability is the use of SQL Server.

*Configure RD Connection Broker in Windows Server 2012 with SQL Server 2012 AlwaysOn Failover Cluster Instances:

1. Create a SQL Server 2012 Failover Cluster with at least 2 Failover Cluster Instances
2. Configure RD Connection Broker high availability with Windows Server 2012 using the following database connection string:

DRIVER=SQL Server Native Client 11.0;SERVER=;

Trusted_Connection=Yes;APP=Remote Desktop Services Connection

Broker;DATABASE=;

Incorrect answers:

* Load balancing does improve performance, but does not provide redundancy.

* Windows Internal Database:

Windows Internal Database (codenamed WYukon, sometimes referred to as SQL Server Embedded Edition) is a variant of SQL Server Express 2005 that is included with Windows Server 2008 and Windows Server 2008 R2, and is included

with other free Microsoft products released after 2007 that require an SQL Server database backend. Windows Internal Database is not available as a standalone product for use by end-user applications; Microsoft provides SQL Server

Express and Microsoft SQL Server for this purpose.

Additionally, it is designed to only be accessible to Windows Services running on the same machine.

QUESTION 4

Your company plans to deploy a Microsoft Application Virtualization (App-V) 5.0 infrastructure. You need to recommend a strategy to ensure that you can manage the App-V 5.0 infrastructure if a single management server fails. What should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Failover Clustering
- B. Database mirroring
- C. Network Load Balancing (NLB)
- D. DNS round robin

Correct Answer: C

QUESTION 5

You virtualize App5 and App6.

You need to ensure that App5 and App6 meet the application requirements.

What should you do?

- A. From the Application Virtualization Management Console, add a connection group.
- B. From the Application Virtualization Management Console, upgrade the packages.
- C. From the Microsoft Application Virtualization Sequencer, modify the Properties settings of App5 and App6.
- D. From the Microsoft Application Virtualization Sequencer, modify the Deployment settings of App5 and App6.

Correct Answer: A
