QUESTION 1

Your network contains an Active Directory domain. The domain contains servers that run Windows Server 2012 and client computers that run Windows 8.

You have three applications named App1, App2, and App3. App1 and App2 can run on Windows 8. App3 can run only on Windows XP.

You need to recommend application deployment solutions that meet the following requirements:

App1 must be installed on all of the client computers in the domain automatically when the client computers restart.

App2 must be installed only when a user executes a .xyz file. App3 must be available on all of the client computers.

Which application deployment solution should you recommend for each application? To answer, drag the appropriate solution to the correct application in the answer area. Each solution may be used once, more than once, or not at all.

Additionally, you may need to drag the split bar between panes or scroll to view content.

Select and Place:

Solutions	Answer Area
Assign the application by using a Group Policy.	App1 Solution
Publish the application by using a Group Policy.	App2 Solution
Publish the application as a RemoteApp program.	App3 Solution
Deploy the application on a virtual machine on each client computer.	

Correct Answer:

Solutions	Answer Area
	App1 Assign the application by using a Group Policy.
	App2 Publish the application by using a Group Policy.
Publish the application as a RemoteApp program.	App3 Deploy the application on a virtual machine on each client computer.

QUESTION 2

You plan to deploy virtual desktops to the network. All of the virtual desktops will be based on a virtual machine template named Templatel.vhd. Templatel.vhd contains an application named Appl.

You plan to deploy an update to App1 named Applupdate.msp.

You need to recommend the appropriate deployment method to apply Applupdate.msp to Templatel.vhd. You want to achieve this goal by using the minimum amount of administrative effort.

Which deployment method should you recommend?

- A. Run dism.exe and specify the /mount-w\rr\ parameter and the /add-package parameter.
- B. Start a virtual machine that uses Templatel.vhd. Install Applupdate.msp, and then generalize the virtual machine.
- C. Mount Templatel.vhd, and then copy Applupdate.msp to the %Systemroot%\AppPatch folder.
- D. Run diskpart.exe and specify the attach parameter. Run msixexec.exe and specify the /update parameter.

Correct Answer: B

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains client computers that run Windows 7 Enterprise and Windows 8 Enterprise.

Your company identifies the desktop security requirements shown in the following table.

User group name	Software restriction
Group1	Group members must be prevented from running Windows Installer files that originate from Restricted sites.
Group2	Group members must be prevented from running Windows Installer files that originate from Trusted sites.
Group3	Group members must be prevented from running executables located in C:\Temp.
Group4	Group members must be prevented from running executables located in C:\Software.
Group5	Group members must be prevented from running executables located in C:\Temp.
Group6	Group members must be prevented from running executables located in C:\Software.

You need to recommend the number of Group Policy objects (GPOs) that must be created to meet the desktop security requirements.

The solution must use the least amount of GPOs.

How many group policy objects should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. 1
- B. 2
- C. 3
- D. 6

Correct Answer: C

QUESTION 4

Your company plans to deploy a Microsoft Application Visualization (App-V) 5.0 infrastructure. You need to recommend a strategy to ensure that you can manage the App-V 5.0 infrastructure if a single management server fails. What should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Failover Clustering
- B. Database mirroring
- C. Network Load Balancing (NLB)
- D. DNS round robin

Correct Answer: C

QUESTION 5

Your network contains an Active Directory domain named contoso.com. You deploy Remote Desktop Services (RDS).

You create a session collection named Collection1.

You plan to configure Collection1 to use user profile disks. You need to identify what must be created before you configure Collection1 to use the user profile disks.

What should you identify?

- A. A VHDX file
- B. A network share
- C. A VHD file
- D. A storage pool

Correct Answer: B
