### QUESTION 1

#### HOTSPOT

Your network contains an Active Directory domain named contoso.com.

You have a failover cluster named Cluster1 that contains two nodes named Server1 and Server2. Both servers run Windows Server 2012 R2 and have the Hyper-V server role installed.

You plan to create two virtual machines that will run an application named App1. App1 will store data on a virtual hard drive named App1data.vhdx. App1data.vhdx will be shared by both virtual machines.

The network contains the following shared folders:

An SMB file share named Share1 that is hosted on a Scale-Out File Server.

An SMB file share named Share2 that is hosted on a standalone file server.

An NFS share named Share3 that is hosted on a standalone file server.

You need to ensure that both virtual machines can use App1data.vhdx simultaneously.

What should you do?

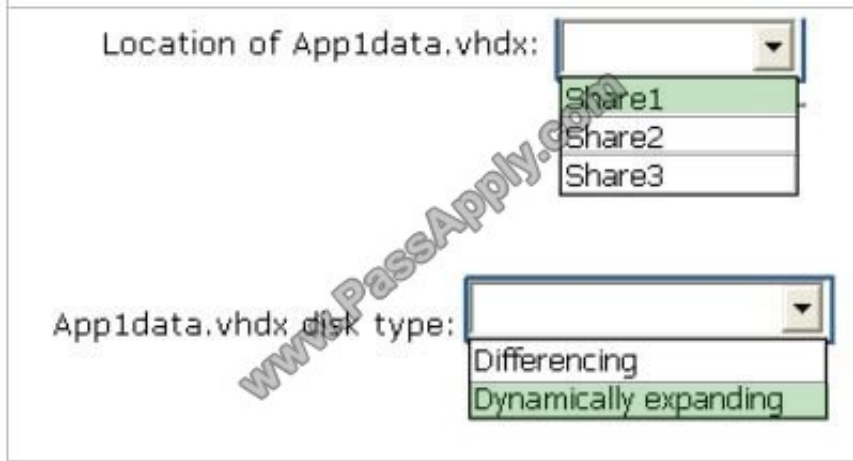

To answer, select the appropriate configurations in the answer area.

Hot Area:

Location of App1data.vhdx:

App1data.vhdx disk type:

Correct Answer:

## QUESTION 2

Your role of Network Administrator at ABC.com includes the management of the Active Directory Domain Services (AD DS) domain named ABC.com. The network includes servers that run Windows Server 2008 R2 Service Pack 1 (SP1) and Windows Server 2012. A Windows Server 2008 R2 SP1 server named ABC-DHCP1 runs the DHCP Server role. All client computers on the network are assigned dynamic IP configurations from ABC-DHCP1. All domain member servers receive their IP configurations from ABC-DHCP1 using IP Address Reservations. All domain controllers have static IP addresses.

You install a new Windows Server 2012 server named ABC-Host1. ABC-Host1 has six physical network adapters. Each network adapter is connected to the network. You configure two network adapter teams each containing two of the network adapters.

You need to configure IP Reservations on ABC-DHCP1 for ABC-Host1. How many reservations should you configure?

- A. 1
- B. 2
- C. 4
- D. 6

Correct Answer: C

## QUESTION 3

DRAG DROP

You have a server that runs Windows Server 2012 R2.

You create a new work folder named Share1.

You need to configure Share1 to meet the following requirements:

1. Ensure that all synchronized copies of Share1 are encrypted.

- 2. Ensure that clients synchronize to Share1 every 30 minutes.
- 3. Ensure that Share1 inherits the NTFS permissions of the parent folder.

Which cmdlet should you use to achieve each requirement?

To answer, drag the appropriate cmdlets to the correct requirements. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Cmdlets	Answer Area
Enable-SyncShare	Ensure that all synchronized copies of Share1 are encrypted. <input type="text" value="Cmdlet"/>
New-SyncDevicePolicy	Ensure that clients synchronize to Share1 every 30 minutes. <input type="text" value="Cmdlet"/>
New-SyncShare	Ensure that Share1 inherits the NTFS permissions of the parent folder. <input type="text" value="Cmdlet"/>
Set-SyncDevicePolicy	
Set-SyncServerSettings	
Set-SyncShare	

Correct Answer:

Cmdlets	Answer Area
Enable-SyncShare	Ensure that all synchronized copies of Share1 are encrypted. <input type="text" value="Set-SyncShare"/>
New-SyncDevicePolicy	Ensure that clients synchronize to Share1 every 30 minutes. <input type="text" value="Set-SyncServerSettings"/>
New-SyncShare	Ensure that Share1 inherits the NTFS permissions of the parent folder. <input type="text" value="Set-SyncShare"/>
Set-SyncDevicePolicy	
Set-SyncServerSettings	
Set-SyncShare	

```
PS C:\Users\administrator.!\ > Get-SyncShare

Description           :
Enabled               : True
FallbackEnterpriseID : lab
InheritParentFolderPermission : False
MaxUploadFile        : 10737418240
Name                 : sync1
PasswordAutoLockExcludeDomain : {}
Path                 : c:\sync1
RequireEncryption    : False
RequirePasswordAutoLock : True
StagingFolder        : c:\SyncShareState\sync1
Type                 : User Data
User                 : {.\Domain Users}
UserFolderName       : [user]
PSComputerName       :
```

New-SyncDevicePolicy and the Set-SyncDevicePolicy are invalid commands

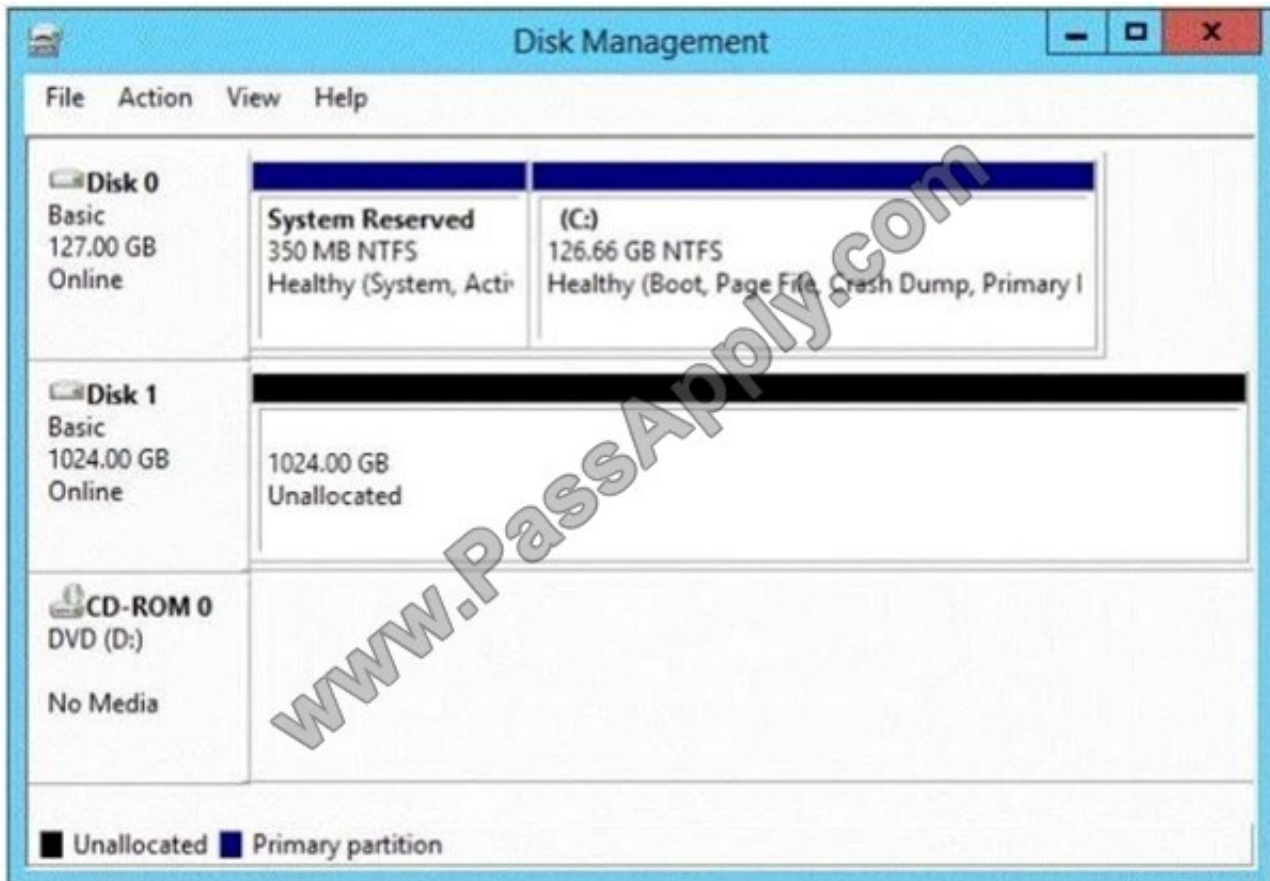

```
PS C:\Users\administrator.!\ > new-syncdevicepolicy
new-syncdevicepolicy : The term 'new-syncdevicepolicy' is not recognized as the name of a cmdlet, function, script
file, or operable program. Check the spelling of the name, or if a path was included, verify that the path is correct
and try again.
At line:1 char:1
+ new-syncdevicepolicy
+ ~~~~~
+ CategoryInfo          : ObjectNotFound: (new-syncdevicepolicy:String) [], CommandNotFoundException
+ FullyQualifiedErrorId : CommandNotFoundException

PS C:\Users\administrator.!\ > set-syncdevicepolicy
set-syncdevicepolicy : The term 'set-syncdevicepolicy' is not recognized as the name of a cmdlet, function, script
file, or operable program. Check the spelling of the name, or if a path was included, verify that the path is correct
and try again.
At line:1 char:1
+ set-syncdevicepolicy
+ ~~~~~
+ CategoryInfo          : ObjectNotFound: (set-syncdevicepolicy:String) [], CommandNotFoundException
+ FullyQualifiedErrorId : CommandNotFoundException
```

#### QUESTION 4

You have a server named Server1 that runs Windows Server 2012 R2.

You add an additional disk to Server1 as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that users can access the additional disk from drive C. What should you do?

- A. Convert Disk 0 and Disk 1 to dynamic disks and extend a volume.
- B. Convert Disk 1 to a dynamic disk and create a spanned volume.
- C. Create a simple volume on Disk 1 and mount the volume to a folder.
- D. Convert Disk 0 to a dynamic disk and add a mirror.

Correct Answer: C

#### QUESTION 5

Your network contains an Active Directory forest named contoso.com. The forest contains a single domain. All domain controllers run Windows Server 2012 R2. The domain contains two domain controllers. The domain controllers are configured as shown in the following table.

Domain controller name	Server type	Scheduled task
DC1	Physical server	Daily snapshots of Active Directory
DC2	Hyper-V virtual machine	Daily snapshots of the virtual machine Daily backups of the system state

Active Directory Recycle Bin is enabled.

You discover that a support technician accidentally removed 100 users from an Active Directory group named Group1 an hour ago.

You need to restore the membership of Group1.

What should you do?

- A. Perform an authoritative restore.
- B. Perform tombstone reanimation.
- C. Modify the isDeleted attribute of Group1.
- D. Apply a virtual machine snapshot to DC2.

Correct Answer: A
