QUESTION 1

Your role of Network Administrator at ABC.com includes the management of the Active Directory Domain Services (AD DS) domain named ABC.com. The network includes servers that run Windows Server 2012.

A server named ABC-SRV10 runs Windows Server 2012 and is configured as a file server, DHCP server and DNS server.

The company has recently opened a branch office. You plan to move ABC-SRV10 to the branch office.

To improve security, you want to remove the graphical user interface (GUI) from ABC-SRV10. What is the easiest way to remove the GUI from ABC-SRV10?

- A. Run the Remove-WindowsFeature Desktop-Experience cmdlet.
- B. Run the Disable-ServerManagerStandardUserRemoting cmdlet.
- C. Reinstall Windows Server 2012.
- D. Uninstall the User Interfaces and Infrastructure feature.

Correct Answer: D

QUESTION 2

Your role of Network Administrator at ABC.com includes the management of the Active Directory Domain Services (AD DS) domain named ABC.com. The network includes servers that run Windows Server 2008 R2 Service Pack 1 (SP1) and Windows Server 2012. A server named ABC-File1 runs the File and Storage Services server role. ABC-File1 hosts shared folders on the D: drive. Users access the shared folders from their Windows 7 client computers. A user attempts to recover a previous version of a file in a shared folder on ABC-File1 but discovers that there is no previous versions option. How can you ensure that users can recover files using the Previous Versions function?

- A. By modifying the Share Properties of each shared folder.
- B. By enabling Shadow Copies on the D: drive of ABC-File1.
- C. By adding a condition to the shared folders on ABC-File1.
- D. By modifying the settings of the Recycle Bin on ABC-File1.

Correct Answer: B

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains a member server named Server 1. Server1 has the IP Address Management (IPAM) Server feature installed.

A technician performs maintenance on Server1.

After the maintenance is complete, you discover that you cannot connect to the IPAM server on Server1.

You open the Services console as shown in the exhibit. (Click the Exhibit button.)

Exhibit:

Name	Status
Windows Color System	
Windows Connection Manager	Running
Windows Driver Foundation - User-mode Driver Framework	
Windows Encryption Provider Host Service	
Windows Error Reporting Service	
Windows Event Collector	
Windows Event Log	
Windows Firewall	Running
Windows Font Cache Service	Running
Windows Installer	
Windows Internal Database	
Windows Internal Database VSS Writer	
Windows Management Instrumentation	Running
Windows Modules Installer	
Windows Process Activation Service	
Windows Remote Management (WS-Management)	Running
Windows Store Service (WSService)	
Windows Time	Running
Windows Update	
WinHTTP Web Proxy Auto-Discovery Service	
Wired AutoConfig	
WMI Performance Adapter	
Workstation	Running

You need to ensure that you can connect to the IPAM server. Which service should you start?

- A. Windows Process Activation Service
- B. Windows Event Collector
- C. Windows Internal Database
- D. Windows Store Service (WSService)

Correct Answer: C

QUESTION 4

DRAG DROP

Your network contains an Active Directory domain named contoso.com. The domain contains a domain controller named DC1.

You need to create an Active Directory snapshot on DC1.

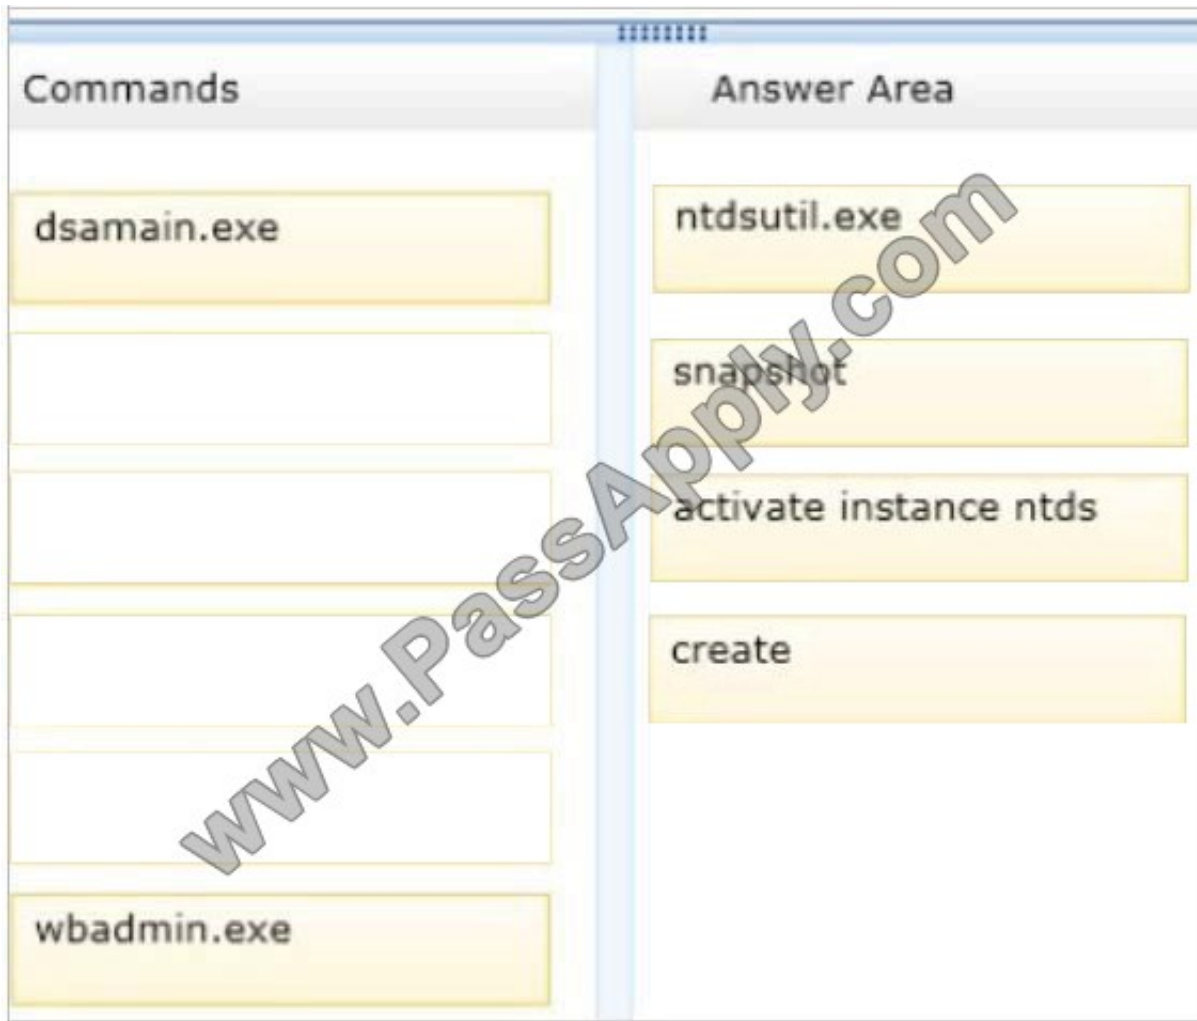

Which four commands should you run?

To answer, move the four appropriate commands from the list of commands to the answer area and arrange them in the correct order.

Select and Place:

Commands	Answer Area
dsamain.exe	
snapshot	
create	
ntdsutil.exe	
activate instance ntds	
wbadmin.exe	

Correct Answer:

Box 1: ntdsutil

Box 2: snapshot

Box 3: activate instance ntds

Box 4: create

Note:

Create a snapshot of AD DS in Windows Server 2012 R2 by using NTDSUTIL

1 – On the domain server, open command prompt and type ntdsutil and press enter...

2 – Next, type snapshot and press enter...

3 – Next, type activate instance ntds and press Enter...

4 – Next, type create (this create command is to generate a snapshot of my AD) and press Enter...

QUESTION 5

HOTSPOT

You have a server that runs Windows Server 2012 R2 and has the iSCSI Target Server role service installed.

You run the New-IscsiVirtualDisk cmdlet as shown in the New-IscsiVirtualDisk exhibit. (Click the Exhibit button.)

```
Administrator: Windows PowerShell
PS C:\> New-IscsiVirtualDisk -Path C:\iSCSIVirtualDisks\Disk2.vhdx -SizeBytes 10GB -ComputerName server2.conto
so.com

ClusterGroupName      : Server2.Contoso.com
ComputerName          : Server2.Contoso.com
Description            :
DiskType              : Dynamic
HostVolumeId          : {90C0B44E-0393-11E3-AF15-806E6F6E6963}
LocalMountDeviceId    :
OriginalPath          :
ParentPath            :
Path                  : C:\iSCSIVirtualDisks\Disk2.vhdx
SerialNumber          : 2923C70B-EB08-4112-9363-FC20C692E15F
Size                  : 10737418240
SnapshotIds           :
Status                : NotConnected
VirtualDiskIndex      : 1206444880

PS C:\>
```

To answer, complete each statement according to the information presented in the exhibits. Each correct selection is worth one point.

Hot Area:

Answer Area

Disk2.vhdx is ... disk space on drive C.

- not using any
- using 4 MB of
- using 10 GB of

Before an iSCSI initiator can connect to Disk2.vhdx, you must ...

- assign Disk2.vhdx to a target.
- modify the NTFS permissions of Disk2.vh
- mount Disk2.vhdx by running dism.exe.

Correct Answer:

Answer Area

Disk2.vhdx is ... disk space on drive C.

- not using any
- using 4 MB of
- using 10 GB of

Before an iSCSI initiator can connect to Disk2.vhdx, you must ...

- assign Disk2.vhdx to a target.
- modify the NTFS permissions of Disk2.vh
- mount Disk2.vhdx by running dism.exe.

According to the exhibit, a virtual disk of 10 GB has been created on the C drive.

After the iSCSI VHDX object has been created, the virtual disk can be assigned to an iSCSI target. Once a virtual disk has been assigned to a target, and an initiator connects to that target, the iSCSI initiator can then access the virtual disk

after the initiator connects to the target.
