QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2. Server1 is an enterprise root certification authority (CA) for contoso.com.

Your user account is assigned the certificate manager role and the auditor role on the contoso.com CA. Your account is a member of the local Administrators group on Server1.

You enable CA role separation on Server1.

You need to ensure that you can manage the certificates on the CA.

What should you do?

- A. Remove your user account from the local Administrators group.
- B. Assign the CA administrator role to your user account.
- C. Assign your user account the Bypass traverse checking user right.
- D. Remove your user account from the Manage auditing and security log user right.

Correct Answer: D

QUESTION 2

Your role of Network Administrator at ABC.com includes the management of the Active Directory Domain Services (AD DS) domain named ABC.com. The network includes servers that run Windows Server 2008 R2 Service Pack 1 (SP1) and Windows Server 2012. The domain is configured to use different password policies. You want to view the settings in a PSO (Password Settings Object).

How can you view the settings in the PSO?

- A. By running the Get-ADFineGrainedPasswordPolicy PowerShell cmdlet.
- B. By running the Get-ADDefaultDomainPasswordPolicy PowerShell cmdlet.
- C. By running the Get-ADDomainControllerPasswordReplicationPolicyUsage PowerShell cmdlet.
- D. By running the Get-ADAccountResultantPasswordReplicationPolicy PowerShell cmdlet.
- E. By running the Get-ADUserResultantPasswordPolicy PowerShell cmdlet.

Correct Answer: A

QUESTION 3

DRAG DROP

Your network contains an Active Directory domain named contoso.com.

You deploy a web-based application named App1 to a server named Server1. App1 uses an application pool named AppPool1. AppPool1 uses a domain user account named User1 as its identity. You need to configure Kerberos constrained

delegation for User1.

Which three actions should you perform? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Run setspn.exe and specify the -l parameter.	
From the properties of User1, open the Delegation tab, and add the HOST service.	
From the properties of User1, open the Delegation tab, and select Trust this user for delegation to any service (Kerberos only).	
From the properties of User1, open the Delegation tab, and select Trust this user for delegation to specified services only.	
Run setspn.exe and specify the -s parameter.	

Correct Answer:

Actions	Answer Area
	Run setspn.exe and specify the -l parameter.
From the properties of User1, open the Delegation tab, and add the HOST service.	Run setspn.exe and specify the -s parameter.
From the properties of User1, open the Delegation tab, and select Trust this user for delegation to any service (Kerberos only).	From the properties of User1, open the Delegation tab, and select Trust this user for delegation to specified services only.

QUESTION 4

Your role of Network Administrator at ABC.com includes the management of the Active Directory Domain Services (AD DS) domain named ABC.com. The network includes servers that run Windows Server 2008 R2 Service Pack 1 (SP1) and Windows Server 2012. You need to commission a new file server in the domain. You install a Windows Server 2012 server named ABC-W12File1 and install the File Server role. You want to use an online backup service in Windows Server Backup to back up the shared folders on ABC-W12File1. You install the Windows Server Backup feature on ABC-W12File1.

You then register for Windows Azure Online Backup.

Which two of the following actions should you perform next? (Choose two).

- A. Install the Windows Server Migration Tools feature.
- B. Download and install the Microsoft Online Backup Service Agent.
- C. Run the wbadmin.exe utility.
- D. Register the server in Windows Server Backup.
- E. Register the server in the Windows Azure Online Backup dashboard.

Correct Answer: BD

QUESTION 5

Your network contains an Active Directory forest named contoso.com. All servers run Windows Server 2012 R2.

You need to create a custom Active Directory application partition.

Which tool should you use?

- A. Eseutil
- B. Dsadd
- C. Dsmmod
- D. Ntdsutil

Correct Answer: D

To create or delete an application directory partition

-

partition management

Manages directory partitions for Active Directory Domain Services (AD DS) or Active Directory Lightweight Directory Services (AD LDS). This is a sub command of Ntdsutil and Dsmgmt. Ntdsutil and Dsmgmt are command-line tools that are

built into Windows Server 2008 and Windows Server 2008 R2.

-

partition management create nc %s1 %s2

Creates the application directory partition with distinguished name %s1, on the Active Directory domain controller or AD LDS instance with full DNS name %s2. If you specify "NULL" for %s2, this command uses the currently connected Active

Directory domain controller.

Use this command only with AD DS. For AD LDS, use createnc %s1 %s2 %s3.

Note:

An application directory partition is a directory partition that is replicated only to specific domain controllers. A domain controller that participates in the replication of a particular application directory partition hosts a replica of that partition.
