### QUESTION 1

You administer a SQL Server 2008 instance that contains the AdventureWorks database. The Adventure Works database uses the bulk-logged recovery mode.

You log ship the AdventureWorks database across a WAN link.

There is a scheduled job that rebuilds the indexes of the AdventureWorks database.

You discover that the job increases the size of the log backups for log shipping.

You need to minimize the size of the log backups used by log shipping.

What should you do?

- A. Compress the log file backups.
- B. Change the job to drop the indexes, and then recreate the indexes.
- C. Alter the AdventureWorks database to use the Full recovery mode.
- D. Alter the AdventureWorks database to use the Simple recovery mode.

Correct Answer: A

---

### QUESTION 2

You maintain a SQL Server 2008 instance that contains a database named Finance.

You suspect that three large tables in the Finance database are corrupt. You plan to execute the DBCC CHECKTABLE statement concurrently on the three tables to minimize downtime.

You need to set the database option to prevent users from accessing the database during the execution of the statement.

Which database option should you turn on?

- A. OFFLINE
- B. READ\_ONLY
- C. RESTRICTED\_USER
- D. SINGLE\_USER

Correct Answer: D

---

### QUESTION 3

You maintain multiple SQL Server 2008 instances on the same physical computer.

Users can connect to the default instance but are unable to connect to the named instances. You verify that currently all SQL Server instances run.

You need to start the service required to connect to the named instances.

Which Service should you start?

- A. Server
- B. SQL Server Agent
- C. SQL Server Browser
- D. SQL Active Directory Helper

Correct Answer: C

---

#### QUESTION 4

You maintain a SQL Server 2008 instance that contains a database named DB1. DB1 stores customer data for the company. The customers use a Web application to access their profile data. You need to protect the customer data such that data files, log files, and subsequent backups are as secure as possible even if the backup media is lost. Your solution must not affect the Web application or impact performance.

What should you do?

- A. Encrypt the customer data at the cell level and then back up DB1.
- B. Configure access to DB1 to only use stored procedures and functions.
- C. Enable Transparent Database Encryption for DB1 and then back up the transaction logs.
- D. Encrypt the customer data at the folder level by using Encrypted File System (EFS) and then back up the transaction logs.

Correct Answer: C

---

#### QUESTION 5

You administer a Microsoft SQL Server 2008 R2 database instance. The service account used by SQL Server services must not have administrative permissions.

You configure a new SQL Server Agent job to run every night. One of the steps in the job runs an Operating System (CmdExec) step. The job continuously fails on this step and throws the following error message:

"The user does not have sufficient permission to perform the operation."

You need to ensure that the SQL Server Agent Job executes successfully.

Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Create a Credential object on the SQL Server and assign the object to the Windows Account.	
Create a SQL Server account and map the account to the credential. Assign the account to the SysAdmin server role.	
Create a Windows domain account. Add the account to the Users group on the Production Server.	
Create a proxy in the SQL Server Agent and assign the proxy to the Credential object.	
Create a Windows domain account. Add the account to the Local Administrators group on the Production SQL Server.	
Open the job in the SQL Server Agent, and open the Operating System (CmdExec) step. Under <b>Run As</b> , select <b>SQL Server Agent Account</b> .	
Open the job in the SQL Server Agent, and open the Operating System (CmdExec) step. Under <b>Run As</b> , select the proxy.	

Correct Answer:

Answer Area	
	Create a Credential object on the SQL Server and assign the object to the Windows Account.
Create a SQL Server account and map the account to the credential. Assign the account to the SysAdmin server role.	Create a proxy in the SQL Server Agent and assign the proxy to the Credential object.
Create a Windows domain account. Add the account to the Users group on the Production Server.	Create a Windows domain account. Add the account to the Local Administrators group on the Production SQL Server.
	Open the job in the SQL Server Agent, and open the Operating System (CmdExec) step. Under <b>Run As</b> , select the proxy.
Open the job in the SQL Server Agent, and open the Operating System (CmdExec) step. Under <b>Run As</b> , select <b>SQL Server Agent Account</b> .
