-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

You administer a SQL Server 2008 instance. You need to find out the number of users who access the SQL Server instance by using Windows System Monitor. Which performance object should you capture?

- A. SQLServer:Exec Statistics
- B. SQLServer:Buffer Manager
- C. SQLServer:Access Methods
- D. SQLServer:General Statistics

Correct Answer: D

---

### QUESTION 2

You administer a remote SQL Server 2008 instance. Users report that the performance of the application is poor. You use SQL Profiler to capture a workload of the remote instance to a trace table on the remote SQL Server instance. You need to analyze the workload of the remote SQL Server instance on a local SQL Server instance by using the Database Engine Tuning Advisor. What should you do?

- A. Use the data collector to recapture the workload.
- B. Use SQL Profiler to recapture the workload to a trace file.
- C. Enable the XP\_MSVER stored procedure on the local server.
- D. Enable the XP\_MSVER stored procedure on the remote server.

Correct Answer: B

---

### QUESTION 3

You configure a SQL Server 2008 instance that contains a database named Customers. The Customers database experiences deadlock problems. You need to capture the deadlock information to the SQL Server error log. What should you do?

- A. Enable file system auditing.
- B. Enable the Windows Event Collector service.
- C. Configure trace flags and then restart the SQL Server instance.
- D. Configure a Data Collector Set and then restart the SQL Server instance.

Correct Answer: C

---

#### QUESTION 4

You maintain a SQL Server 2008 instance that contains a database named Finance. In your absence, a user with a login named Rob will maintain the database snapshots. You need to grant the appropriate permissions to the user to delete the database snapshots for the Finance database.

Which database permission should you grant?

- A. DELETE
- B. CONTROL
- C. DROP DATABASE
- D. ALTER ANY DATASPACE

Correct Answer: C

---

#### QUESTION 5

You maintain multiple SQL Server 2008 instances.

You are designing a consolidated repository of performance data. You need to ensure that the following requirements are met:

The data collector is used to gather performance information. A single database stores performance information for all instances. Performance information that is older than 14 days is deleted. Administrative effort to manage performance data

is minimized.

What should you do?

- A. Create and schedule a single Microsoft SQL Service Integration Services (SSIS) package process to store and delete performance data in a single database for all instances.
- B. Create a SQL Agent job process on each instance to store and delete performance data in a single database for all instances.
- C. Configure a management data warehouse process on each instance to store and delete performance data in a single database for all instances.
- D. Configure an automated server-side trace process on each instance to store and delete performance data in a single database for all instances.

Correct Answer: C
