### QUESTION 1

You are a database administrator for your company. The company's manufacturing floor has three automated testing areas for finished items. Each testing area uses SQL Server 2005 to store test results. You need to develop a replication strategy to ensure that test results flow continuously from the testing areas to the central SQL Server as quickly as possible. The test results are used for reporting.

What should you do?

- A. Create a separate snapshot publication at each of the testing areas for the test results. Create a pull subscription on the central server to each of the testing area publications.
- B. Create a separate snapshot publication at each of the testing areas for the test results. Create a merge subscription on each distributor to the central server.
- C. Create a separate transactional publication at each of the testing areas for the test results. Create push subscriptions on each of the testing areas to the central server.
- D. Create a separate transactional publication at each of the testing areas for the test results. Create a merge subscription on each distributor to the central server.

Correct Answer: C

---

### QUESTION 2

You are a database administrator for your company. The company has a SQL Server 2005 computer named SQL1. A database on SQL1 stores sales history data for the company's Web-based order system. Twenty of the business analysts in the company create ad hoc queries against the database. The performance of SQL1 is routinely slow. You need to find out which business analyst is causing the problem.

What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

- A. Run the sp\_who system stored procedure.
- B. Run SQL Trace system stored procedures to gather database activity.
- C. Use the Activity Monitor to view the activity of specific business analysts.
- D. Create a trace that uses a predefined template by using SQL Server Profiler.

Correct Answer: BD

---

For a login not defined in the list above, connections will:

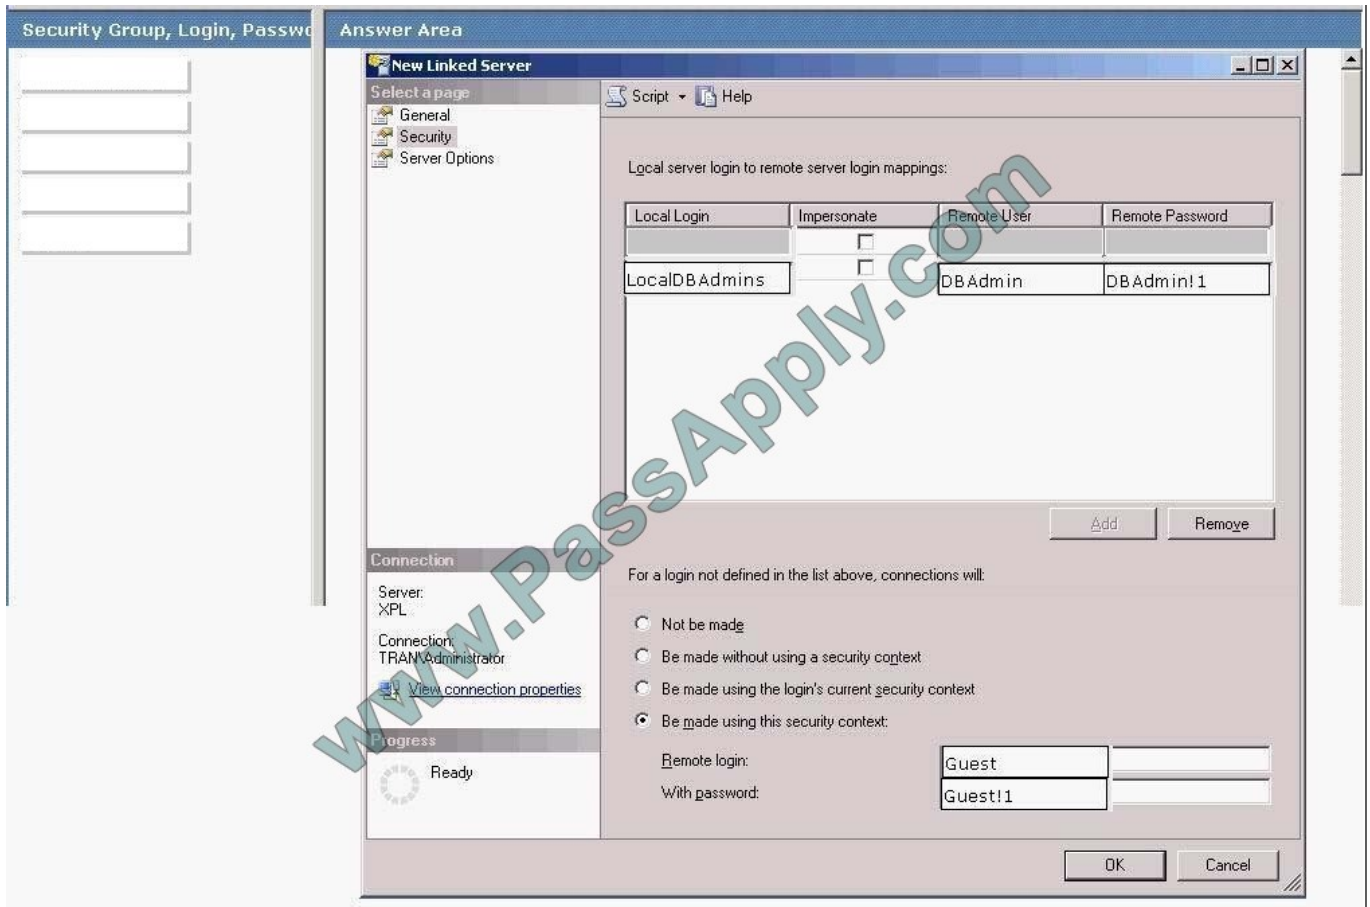

- Not be made
- Be made without using a security context
- Be made using the login's current security context
- Be made using this security context:

Remote login:

With password:

OK Cancel

Correct Answer:

#### QUESTION 4

You are a database administrator for your company. The company uses a SQL Server 2005 database that includes a table named Inventory. The table contains a column named Price. A company policy states that the value in the Price column cannot be decreased by more than 10 percent in any single database operation. Updates to the Price column are made by various means, including by using ad hoc queries. You need to ensure that this company policy is enforced.

What should you do?

- A. Create a trigger that rolls back changes to the Price column that violate company policy.
- B. Create a stored procedure that disallows changes to the Price column that violate company policy.
- C. On the Price column, create a check constraint that requires a specified minimum value.
- D. On the Price column, create a foreign key constraint to a table that contains valid prices.

Correct Answer: A

#### QUESTION 5

You are a database administrator for Company.com. The SQL 2005 Server computer has been in operation for more than one month. This past week, query performance problems have led you to investigate locking contention. The

sys.dm\_os\_wait\_stats dynamic management view (DMV) is showing a high value in the max\_wait\_time\_ms column. You need to find out if this value is a factor in the current performance problems.

You also must minimize the impact on database users.

What should you do?

- A. Reset the statistics in the dynamic management view (DMV).
- B. Restart the SQL Server computer.
- C. Execute the UPDATE STATISTICS command.
- D. Restart the SQL Server Service.

Correct Answer: A
