QUESTION 1

You maintain a SQL Server 2008 Analysis Services (SSAS) database. You create a new measure group in one of the cubes.

You have a program that maintains partitions on the production copy of the cube.

You need to update the cube definition on the production server without overwriting any existing partitions.

What should you do?

- A. Use the Deployment Wizard along with the appropriate options.
- B. Execute an UPDATE CUBE statement in Microsoft SQL Server Management Studio (SSMS).
- C. Use the Analysis Services Destination component in Microsoft SQL Server Integration Services (SSIS).
- D. Use the Business Intelligence Development Studio (BIDS) and set the processing option to Do Not Process.

Correct Answer: A

QUESTION 2

You are creating a SQL Server 2008 Integration Services (SSIS) data flow which moves information to a SQL Server 2008 database for Company.com.

You should make sure that data flow refreshes the existed data in the SQL Server database through utilizing data in your data flow.

Which is the correct answer?

- A. You should utilize Dynamic Management View (DMV)
- B. You should utilize OLE DB Destination
- C. You should utilize SQL Server Destination
- D. You should utilize Data Conversion Transformation

Correct Answer: C

QUESTION 3

You develop a package by using SQL Server 2008 Integration Services (SSIS). You test the package by using your local development environment.

The package is deployed to a production server.

You need to configure the protection level of the package to ensure that only the user who deployed the package can execute it.

Which protection level should you use?

- A. EncryptAllWithPassword
- B. EncryptSensitiveWithPassword
- C. DontSaveSensitive
- D. EncryptAllWithUserKey

Correct Answer: D

QUESTION 4

You design a SQL Server 2008 Integration Services (SSIS) package. The package extracts data from flat files and loads this data to a SQL Server 2008 database.

The package contains two Boolean variables named @IsWeekday and @IsHoliday. When the package is executed on week days, the @IsWeekday variable is set to True. When the package is executed on holidays, the @IsHoliday variable

is set to True.

You need to implement the following business logic in the control flow of the package:

When the @IsWeekday variable is set to True, the Perform Weekday Processing Data Flow task is executed.

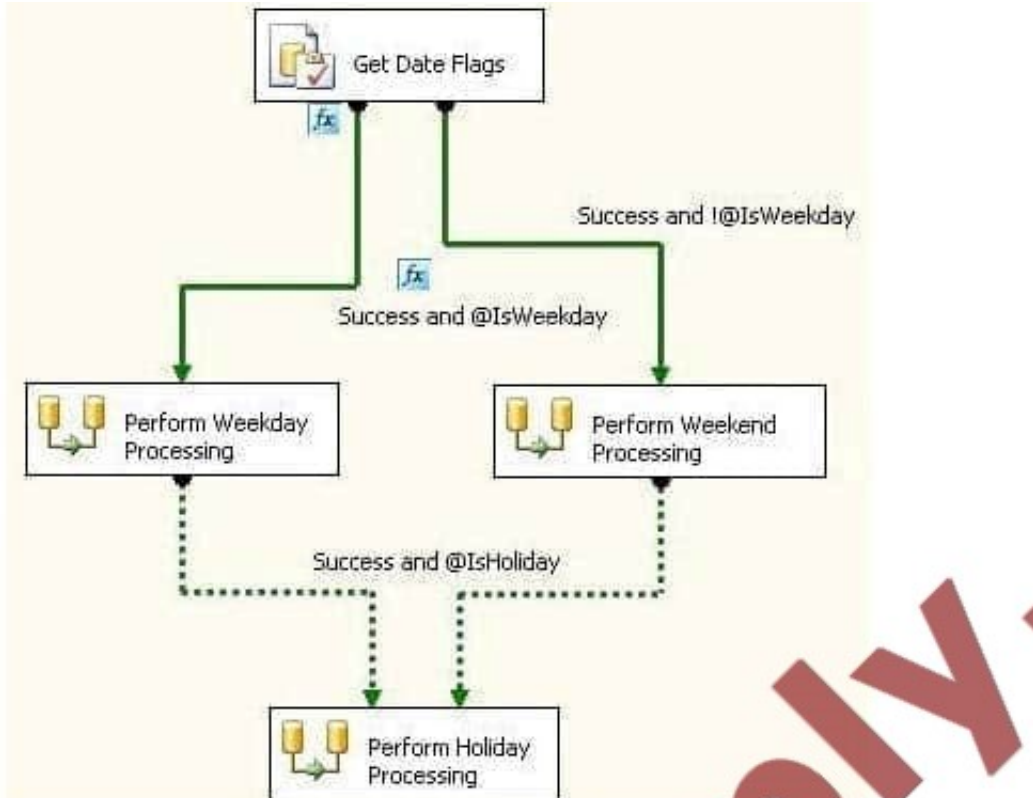

When the @IsWeekday variable is set to False, the Perform Weekend Processing Data Flow task is executed.

When the @IsHoliday variable is set to True, the Perform Holiday Processing Data Flow task is executed.

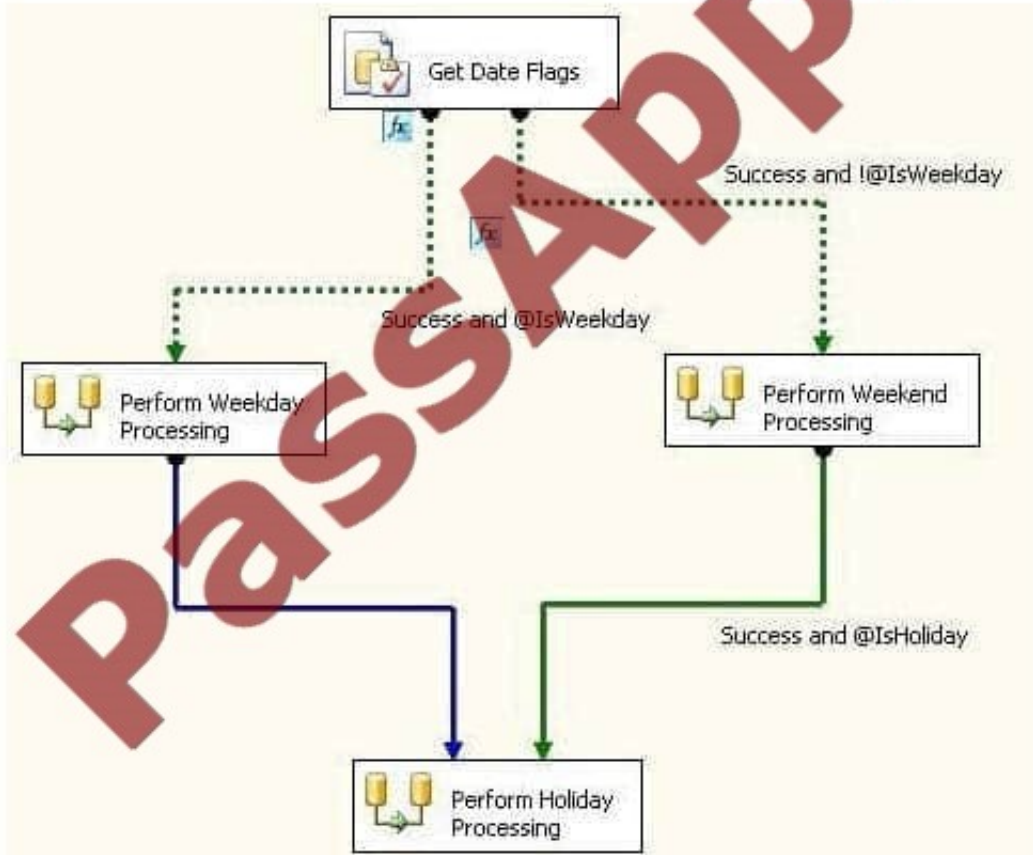

Which control flow logic should you implement?

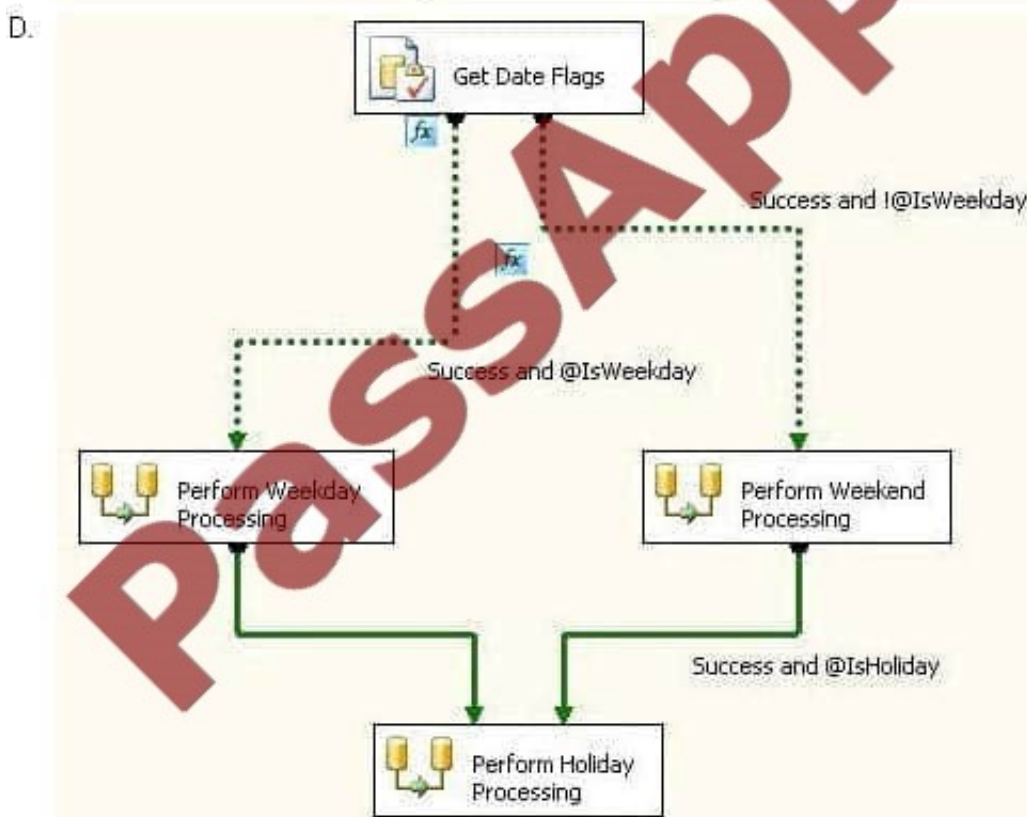

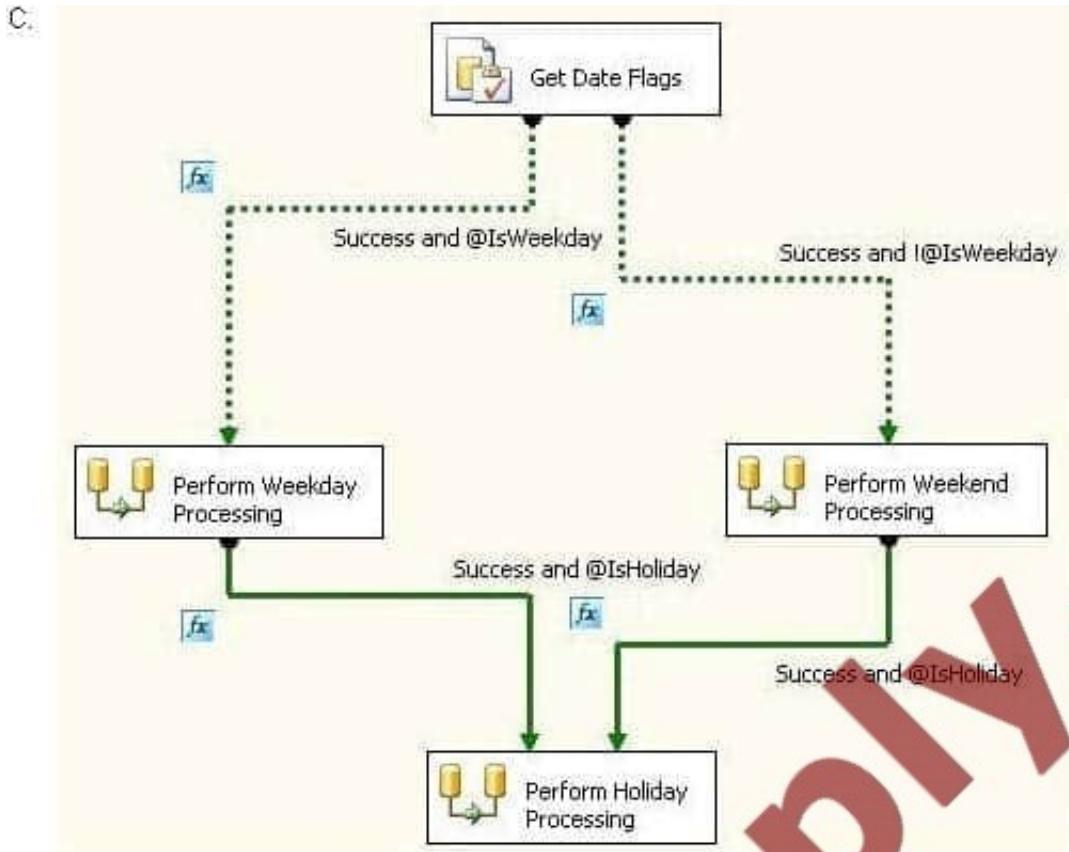

A.

B.

A. B.

C. D.

Correct Answer: A

QUESTION 5

You are a SQL Server 2008 Reporting Services (SSRS) developer. You develop a report with two parameters named Region and City in that order. When the Region parameter is selected, the City parameter should be filtered by the Region selected.

You need to enable this functionality.

What should you do?

- A. Create a distinct dataset that includes all possible values and attach it to the parameter.
- B. Create a dynamic dataset that utilizes the WHERE clause to filter by the parameter.
- C. Create a dynamic data source from a dataset by using the IN operator.
- D. Configure the Internal Visibility option for the parameter.
- E. Change the dataset from a shared dataset to an embedded dataset in the report.
- F. Create a dynamic data source from a dataset that includes a list of distinct servers.
- G. Create a dynamic dataset that includes a list of the different users.
- H. Configure the Hidden Visibility property.

Correct Answer: B
