-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

You are a database developer for a retail application. You create a database by using SQL Server 2008 in a distributed enterprise environment that has multiple servers. The same database is implemented on all the servers. The database contains a table that has a surrogate key.

You need to ensure that the following requirements are met:

What should you do?

- A. Use the timestamp data type.
- B. Use the bigint data type. Use the IDENTITY property in the column definition.
- C. Use the uniqueidentifier data type. Use the NEWID() function in a default constraint.
- D. Use the uniqueidentifier data type. Use the NEWSEQUENTIALID() function in a default constraint.

Correct Answer: D

QUESTION 2

You are designing a document repository application that will contain over 100,000 documents. The repository will have the following specifications: What should you include in the design?

- A. an XML data type
- B. nvarchar() null
- C. sparse columns
- D. varchar(max) not null

Correct Answer: C

QUESTION 3

You are a database developer. You plan to design a database solution by using SQL Server 2008.

The database will contain a table that has a parent-child relationship to itself. Each child might also be a parent. This might exist up to 10 levels deep.

You need to retrieve all levels by using a single Transact-SQL query.

What should you do?

- A. Write a query to return the first level, and then add a correlated subquery to get the remaining levels.
- B. Write a query to return the first level, and then use the CROSS JOIN operator to join the table back to itself to get the remaining levels.
- C. Create a common-table expression to return the first level and then union back to itself to get the remaining levels.
- D. Create a view that returns the first level, and then use the FULL OUTER JOIN operator to join the table back to the view to get the remaining levels.

Correct Answer: C

QUESTION 4

A new data analytics application is being implemented in your organization.

Users will run a process that compares result sets before and after executing complex data modifications.

The data will always be queried by using the same conditions.

Some tables updated by the processes will not need to be compared.

You need to design a locking strategy for the process that meets the following requirements:

What should the strategy include?

- A. Set the transaction isolation level to SERIALIZABLE.
- B. Use a transaction that uses the WITH (NOLOCK) hint.
- C. Use a transaction that uses the WITH (HOLDLOCK) hint.
- D. Set the transaction isolation level to READ UNCOMMITTED.

Correct Answer: B

QUESTION 5

You are a database developer. You develop solutions by using SQL Server 2008 in an enterprise environment.

You plan to create a stored procedure that queries a sales table and produces forecast data.

You do not have administrative permissions, and you are not the owner of the database. You have permissions to create stored procedures. Users will only have permissions to execute your stored procedures.

You need to ensure that users can execute the stored procedures.

What should you do?

- A. Set the TRUSTWORTHY property of the database to ON.

- B. Include an EXECUTE AS OWNER clause when you create each stored procedure.
- C. Include an EXECUTE AS CALLER clause when you create each stored procedure.
- D. Include a SETUSER statement before you query the sales table in each stored procedure.

Correct Answer: B
