QUESTION 1

DRAG DROP

You administer a single Microsoft SQL Server instance on a two-node failover cluster that has nodes named Node A and Node B. The instance is currently running on Node A.

You want to patch both Node A and Node B by using the most recent SQL Server Service Pack.

You need to ensure that the following requirements are met:

Both nodes receive the update.

Downtime is minimized.

No data is lost.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Pause Node A.	
Pause Node B.	
Failover from Node A to Node B.	Cold - Co
Start the SQL Server service on both nodes.	
Install the service pack on Node A.	Maller
Install the service pack on Node B.	AL DON
Stop the SQL Server services on both nodes.	

Correct Answer:

Pause Node A.	Install the service pack on Node B.
Pause Node B.	Failover from Node A to Node B.
	anstall the service pack on Node A.
Start the SQL Server service on both nodes.	
	Martin
4	Martin .
Stop the SQL Server services on both nodes.	

QUESTION 2

You have three tables that contain data for vendors, customers, and agents. You create a view that is used to look up telephone numbers for these companies.

The view has the following definition: You need to ensure that users can update only the phone numbers by using this view. What should you do?

```
Create view apt.vwCompanyPhoneList
(Source, CompanyID, CompanyNumber,
 LastName, FirstName, BusinessName, Phone)
a.s
SELECT 'Customer' as Source
  , CustomerID
  , CustomerNumber
  , CustomerLastName
UNION ALL
SELECT 'Agent' as Source OM COM
, AgentID
, AgentNumber
, AgentI
   , AgentFirstName
  , AgentBushnessName
   , Phone
FROM apt. Agent
UNION ALL
SELECT 'Vendor' as Source
   , VendorID
   , VendorNumber
   , VendorLastName
   , VendorFirstName
   , VendorBusinessName
    Phone
FROM apt.Vendor
GO
```

A. Alter the view. Use the EXPAND VIEWS query hint along with each SELECT statement.

B. Drop the view. Re-create the view by using the SCHEMABINDING clause, and then create an index on the view.

- C. Create an AFTER UPDATE trigger on the view.
- D. Create an INSTEAD OF UPDATE trigger on the view.

```
Correct Answer: D
```

QUESTION 3

Note: This question is part of a series of questions that use the same set of answer choices. An answer choice may be correct for more than one question in the series.

You administer a SQL Server database server that contains a database named SalesDb. SalesDb contains a schema named Customers that has a table named Regions. A user named UserA is a member of a role named Sales.

UserA is granted the Select permission on the Regions table. The Sales role is granted the Select permission on the Customers schema.

You need to ensure that UserA is disallowed to select from any of the tables in the Customers schema.

Which Transact-SQL statement should you use?

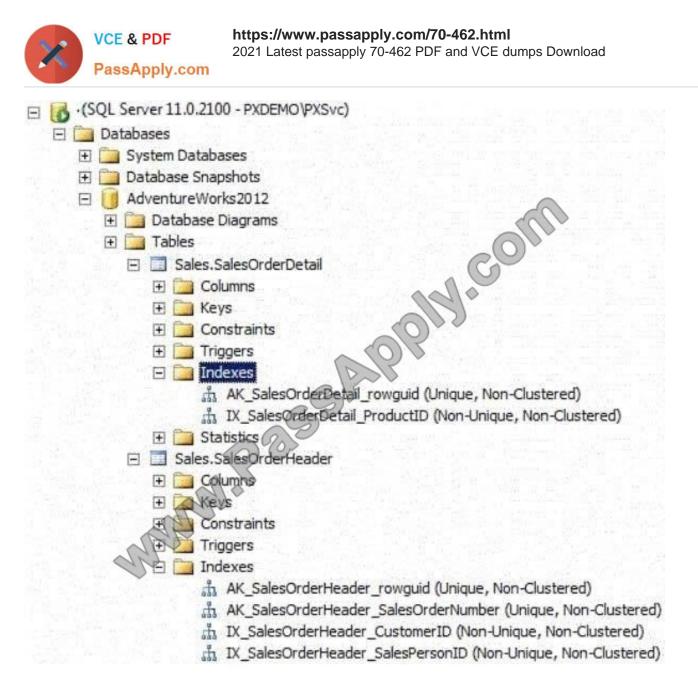

- A. DENY SELECT ON Object::Regions FROM Sales
- B. DENY SELECT ON Schema::Customers FROM Sales
- C. REVOKE SELECT ON Object::Regions FROM Sales
- D. REVOKE SELECT ON Schema::Customers FROM Sales
- E. DENY SELECT ON Object::Regions FROM UserA
- F. DENY SELECT ON Schema::Customers FROM UserA
- G. REVOKE SELECT ON Object::Regions FROM UserA
- H. REVOKE SELECT ON Schema::Customers FROM UserA
- I. EXEC sp_addrolemember \\'Sales\\', \\'UserA\\'
- J. EXEC sp_droprolemember \\'Sales\\', \\'UserA\\'

Correct Answer: F

QUESTION 4

You use a Microsoft SQL Server 2012 database that contains two tables named SalesOrderHeader and SalesOrderDetail. The indexes on the tables are as shown in the exhibit. (Click the Exhibit button.)

You write the following Transact-SQL query:

```
SELECT h.SalesOrderID, h.TotalDue, d.OrderQty
FROM Sales.SalesOrderHeader AS h
    INNER JOIN Sales.SalesOrderDetail AS d
    ON h.SalesOrderID = d.SalesOrderID
WHERE h.TotalDue > 200
AND (d.OrderQty > 5 OR d.LineTotal < 1000.00);</pre>
```

You discover that the performance of the query is slow. Analysis of the query plan shows table scans where the estimated rows do not match the actual rows for SalesOrderHeader by using an unexpected index on SalesOrderDetail.

You need to improve the performance of the query.

What should you do?

A. Use a FORCESCAN hint in the query.

- B. Add a clustered index on SalesOrderId in SalesOrderHeader.
- C. Use a FORCESEEK hint in the query.
- D. Update statistics on SalesOrderId on both tables.
- Correct Answer: D

QUESTION 5

If you find that session ID 42 is blocking several other sessions, which of the following will kill that session?

- A. REMOVE 42;
- B. TERMINATE 42;
- C. KILL SESSION 42;
- D. KILL 42;
- Correct Answer: D
