QUESTION 3

You administer a Microsoft SQL Server failover cluster that contains two nodes named Node A and Node B. A single instance of SQL Server is installed on the cluster.

An additional node named Node C has been added to the existing cluster.

You need to ensure that the SQL Server instance can use all nodes of the cluster.

What should you do?

A. Create a ConfigurationFile.ini file from Node B, and then run the AddNode command-line tool on Node C.

B. Build a new cluster, shut down the current instance, and then migrate to the new cluster.

C. Run the New SQL Server stand-alone installation Wizard on Node C.

D. Use Node B to install SQL Server on Node C.

Correct Answer: C

To add a node to an existing SQL Server failover cluster, you must run SQL Server Setup on the node that is to be added to the SQL Server failover cluster instance. Do not run Setup on the active node.

The Installation Wizard will launch the SQL Server Installation Center. To add a node to an existing failover cluster instance, click Installation in the left-hand pane. Then, select Add node to a SQL Server failover cluster.

QUESTION 4

You administer a Microsoft Azure SQL Database instance named Inventory that contains a stored procedure named p_AddInventory.

Users need to be able to SELECT from all tables in the database and execute the stored procedure.

You need to grant only the necessary permissions.

What should you do?

A. Add EXECUTE AS OWNER to the sttored procedure. Add all users to the db_datareader role.

B. Grant EXECUTE permission on p_AddInventory to all users. Add all users to the db_datawriter role.

C. Add all users to the db_owner role.

D. Add all users to the db_datawriter role. Add all users to the dbd_datareader role.

Correct Answer: A

Executing as OWNER executes the procedure in the context of the procedure owner. If the procedure is created in a schema owned by dbo or the database owner, the procedure will execute with unrestricted permissions.

Members of the db_datareader fixed database role can read all data from all user tables.
