QUESTION 1

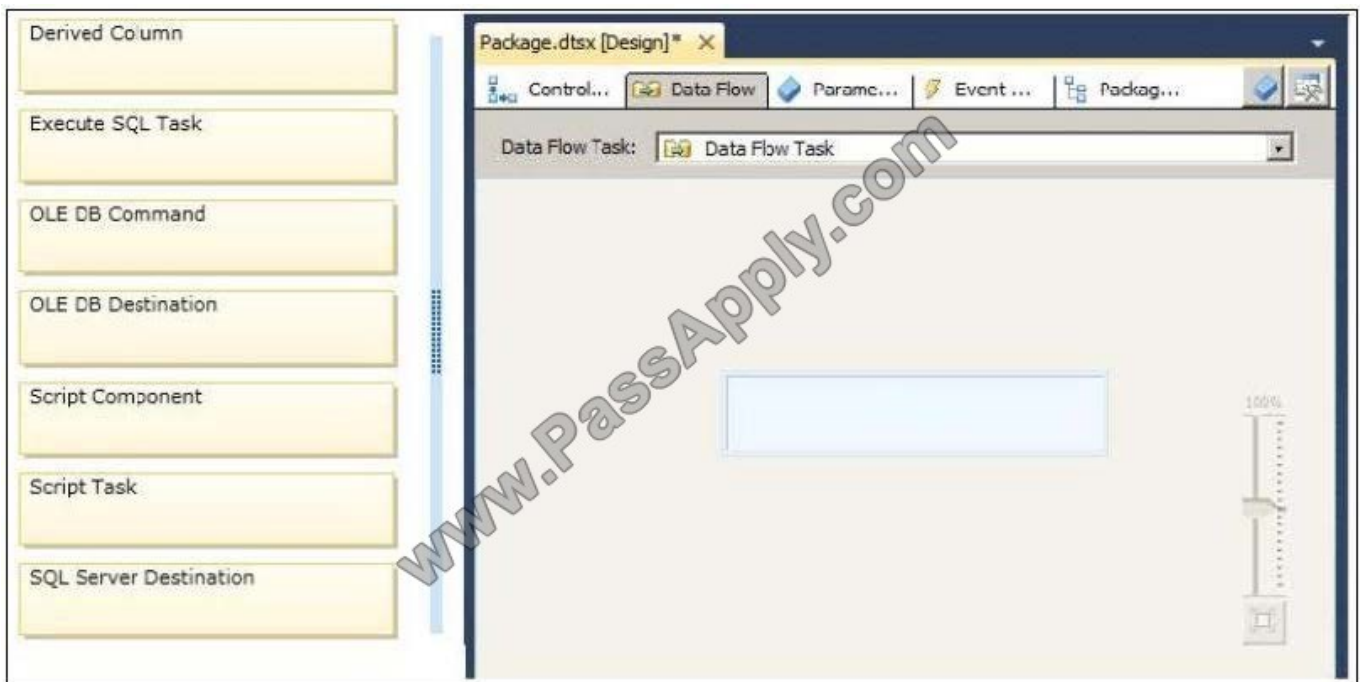

You are developing a SQL Server Integration Services (SSIS) package.

The package uses custom functionality that accesses a SQL Server database. The custom functionality must be implemented by using Language Integrated Query (LINQ).

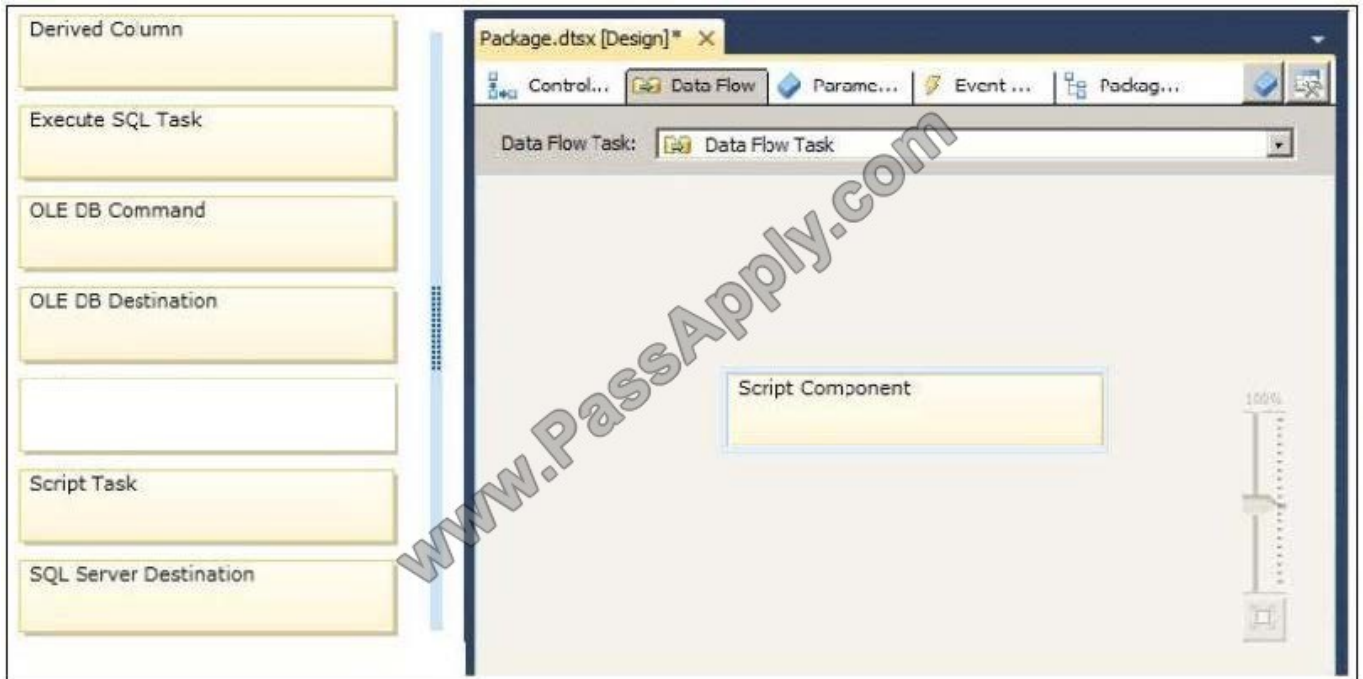

You need to ensure that the LINQ code can be debugged at design time.

What should you select from the SSIS Toolbox? (To answer, drag the appropriate item to the correct location in the answer area.)

Select and Place:

Correct Answer:

QUESTION 2

You are installing the Data Quality Server component of Data Quality Services.

You need to provision the hardware and install the software for the server that runs the Data Quality Server.

You must ensure that the minimum Data Quality Server prerequisites are met.

What should you do?

- A. Install SQL Server 2012 Database Engine.
- B. Install Microsoft SharePoint Server 2010 Enterprise Edition with PowerPivot.
- C. Make sure the server has at least 4 GB of RAM.
- D. Install Microsoft Internet Explorer 6.0 SP1 or later.

Correct Answer: A

Data Quality Server Minimum System Requirements

SQL Server 2012 Database Engine.

Memory (RAM):

-Minimum: 2 GB

-Recommended: 4 GB or more

Note: SQL Server Data Quality Services (DQS) is a new feature in SQL Server 2012 that contains the following two components: Data Quality Server and Data Quality Client.

QUESTION 3

A SQL Server Integration Services (SSIS) project has been deployed to the SSIS catalog. The project includes a project Connection Manager to connect to the data warehouse. The SSIS catalog includes two Environments:

Development

QA

Each Environment defines a single Environment Variable named `ConnectionString` of type string. The value of each variable consists of the connection string to the development or QA data warehouses.

You need to be able to execute deployed packages by using either of the defined Environments.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

In the deployed project, set the **ConnectionString** property of the Connection Manager to use the **ConnectionString** Environment Variable.

In the deployed package, set the **ConnectionString** property of the Connection Manager to use the **ConnectionString** Environment Variable.

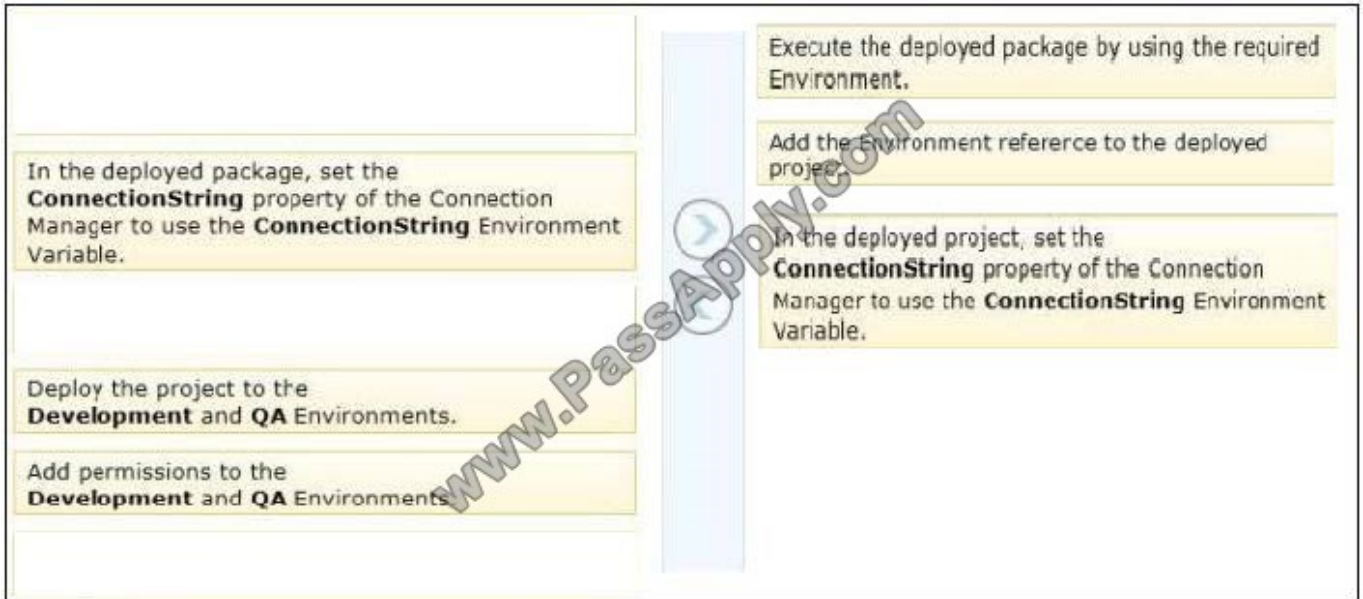

Add the Environment reference to the deployed project.

Deploy the project to the **Development** and **QA** Environments.

Add permissions to the **Development** and **QA** Environments.

Execute the deployed package by using the required Environment.

Correct Answer:

QUESTION 4

You are developing a SQL Server Integration Services (SSIS) package.

The package is stored as the myPackage.dtsx file in the root directory of the C drive of the SSIS server.

You need to run the package from the command prompt.

Which command should you use?

- A. dtexec /sql myPackage
- B. dtexec /d "C:\File System\myPackage.dtsx"
- C. dtexec /f "C:\myPackage.dtsx"
- D. dtexec /com "myPackage.dtsx"

Correct Answer: C

QUESTION 5

You maintain a SQL Server Integration Services (SSIS) package. The package was developed by using SQL Server 2008 Business Intelligence Development Studio (BIDS).

The package includes custom scripts that must be upgraded.

You need to upgrade the package to SQL Server 2012.

Which tool should you use?

- A. SQL Server Configuration Manager
- B. SQL Server Agent
- C. SSIS Upgrade Wizard in SQL Server Management Studio
- D. SQL Server DTEXECUI utility (dtexecui.exe)

Correct Answer: C

You can upgrade packages that were created in earlier versions of Integration Services to the Integration Services format that SQL Server 2012 uses. SQL Server provides the SSIS Package Upgrade Wizard to help in this process. Because

you can configure the wizard to backup up your original packages, you can continue to use the original packages if you experience upgrade difficulties.

You can run the SSIS Package Upgrade Wizard from SQL Server Data Tools (SSDT), from SQL Server Management Studio, or at the command prompt.

Note:

* When you upgrade an instance of SQL Server 2005 or SQL Server 2008 to the current release of SQL Server, your existing SQL Server 2008 Integration Services (SSIS) packages are not automatically upgraded to the package format that the current release SQL Server Integration Services uses. You will have to select an upgrade method and manually upgrade your packages.
