QUESTION 1

You have a SQL Server 2014 environment that contains 20 servers.

The corporate security policy states that all SQL Server 2014 instances must meet specific security standards.

You need to recommend a management strategy for the SQL Server 2014 servers.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

A. Multi server jobs

B. Policy-Based Management

C. Common criteria compliance

D. Maintenance plans

Correct Answer: B

Policy-Based Management is a system for managing one or more instances of SQL Server.

When SQL Server policy administrators use Policy-Based Management, they use SQL Server Management Studio to create policies to manage entities on the server, such as the instance of SQL Server, databases, or other SQL Server

objects.

Policy-Based Management How-to Topics

QUESTION 2

You have a SQL Server 2014 environment that includes four servers. The servers are configured as shown in the following table.

Server name	SQL Server 2014 edition	SQL Server version	Details
Server1	Enterprise	SQL Server 2014	A production Online Transaction Processing (OLTP) server
Server2	Web	SQL Server 2014	A test server
Server3	Standard	SQL Server 2012	A production report server
Server4	Express	SQL Server 2008 R2	A witness server

You plan to configure Policy-Based Management to enforce the following rules:

On Server1, enable SQL Server password policies and enable the default trace. On Server3, ensure that the names of user-defined stored procedures begin with the prefix "usp_" and ensure that all databases use a case-sensitive collation.

You need to recommend which server you must configure as a Central Management Server.

Which server should you recommend? (Each correct answer presents a complete solution.

Choose all that apply.)

A. Server1

B. Server2

C. Server3

D. Seiver4

Correct Answer: AC

Need Standard or Enterprise edition of SQL Server.

QUESTION 3

You need to recommend a solution for the planned changes to the customer classifications.

What should you recommend? (Each correct answer presents part of the solution. Choose all that apply.)

A. Add a row to the Customers table each time a classification changes.

B. Add columns for each classification to the Customers table.

C. Add a table to track any changes made to the classification of each customer.

D. Add a column to the Classifications table to track the status of each classification.

E. Implement change data capture.

Correct Answer: CD

* scenario: You plan to change the way customers are classified. The new classifications will have four levels based on the number of orders. Classifications may be removed or added in the future.

Incorrect:

not E: Change data capture provides information about DML changes on a table and a database. By using change data capture, you eliminate expensive techniques such as user triggers, timestamp columns, and join queries.

QUESTION 4

You have two SQL Server 2014 instances named SQLDev and SQLProd.

You plan to create a new database on SQLProd that will use SQL Server Authentication.

You need to ensure that when the new database is copied from SQLProd to SQLDev, users can connect to the database on SQLDev even if they do not have a login on the SQLDev instance.

What should you use?

More than one answer choice may achieve the goal. Select the BEST answer.

A. Triggers

B. Contained database

C. SQL Server Analysis Services (SSAS) scripts

D. Extended Events

E. SQL Server Integration Services (SSIS) scripts

Correct Answer: B

A fully contained database includes all the settings and metadata required to define the database and has no configuration dependencies on the instance of the SQL Server Database Engine where the database is installed. Reference: Contained Databases

QUESTION 5

You have a database named DB1. DB1 contains a table named Sales.SalesPerson that has an index named AK_SalesPerson_rowguid. Queries that do not use the index take approximately 10 times longer to complete than queries that use

the index.

You discover that AK_SalesPerson_rowguid has severe fragmentation.

You need to recommend a solution to defragment the index. The solution must ensure that the index can be used by queries during the defragmentation.

What statement should you use? To answer, drag the appropriate elements to the correct locations. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Elements

1
BLOCKERS
FILLFACTOR
OFF
ON
ONLINE
REBUILD
REORGANIZE

Answer Area

```
USE DB1
GO
ALTER INDEX AK_SalesPerson_rowquid ON Sales.SalesPerson
```

Element	WITH (	Element	=	Element	)

Correct Answer:

Elements

1
BLOCKERS
FILLFACTOR
OFF
REORGANIZE

Answer Area

```
USE DB1
GO
ALTER INDEX AK_SalesPerson_rowquid ON Sales.SalesPerson
```

REBUILD	WITH (	ONLINE	=	ON	)
