QUESTION 1

You are developing a SQL Server Analysis Services (SSAS) tabular database. To maximize performance, queries must be resolved only by using cache. You need to configure the appropriate query mode.

Which query mode should you select?

A. DirectQuery with In-Memory

B. In-Memory with DirectQuery

C. In-Memory

D. DirectQuery

Correct Answer: C

QUESTION 2

You are developing a SQL Server Analysis Services (SSAS) tabular project for a Power View solution.

You need to grant permission for salespersons to view only the data based on their sales territory.

What should you do?

A. Create a member and then create a Data Analysis Expressions (DAX) filter.

B. Create a member and then create a Multidimensional Expressions (MDX) filter.

C. Use SQL Server Management Studio to create a role. Then create a Data Analysis Expressions (DAX) filter.

D. Use SQL Server Management Studio to create a role. Then create a Multidimensional Expressions (MDX) filter.

Correct Answer: C

QUESTION 3

You are developing a SQL Server Reporting Services (SSRS) report for a company that has a subscription to a dataset from the Microsoft Azure Data Market.

The dataset permits flexible queries.

You need to choose the connection type for the data source.

Which connection type should you choose?

A. XML

B. Microsoft Azure SQL Database

C. Microsoft SharePoint List

D. ODBC

Correct Answer: A

QUESTION 4

You are developing a SQL Server Reporting Services (SSRS) report. The report includes a dataset with fields named Year, MonthNumber, and RegCount. The report includes a table that displays the number of recorded registration occurrences per year, as shown in the following table.

Year	Reg Count
1995	646,530
1996	728,000
1997	776,255
1998	839,324
1999	867, 536
2000	972,305
2001	1,437,642
2002	1,436,908
2003	1,410,109
2004	1,324,998
2005	1,297,629
2006	1,313,613
2007	1,315,046
2008	1,354,499
2009	1,325,585
2010	1,394,674

You need to modify the table to include a graphical item displaying the monthly registration trend to the right of the Reg Count column.

What should you do?

A. Add an Indicator item to a new column on the right of the Reg Count column. Select the Directional Indicator Type and then assign the MonthNumber field to the Start property.

B. Add an Indicator item to a new column on the right of the Reg Count column. Select the Directional Indicator Type and then select the MonthNumber field for Value.

C. Add a Sparkline item to a new column on the right of the Reg Count column. Then select the RegCount field for Values and the MonthNumber field for Series Groups.

D. Add a text box to a new column on the right of the Reg Count column. Then use a Go to report action to link to a separate report showing the monthly trend.

E. Add a Sparkline item to a new column on the right of the Reg Count column. Then select the RegCount field for Values and the MonthNumber field for Category Groups.

Correct Answer: E

QUESTION 5

You have a SQL Server 2012 instance that hosts a single-user database. The database does not contain usercreated stored procedures or user-created functions. You need to minimize the amount of memory used for query plan caching.

Which advanced server option should you modify?

A. Enable Contained Databases

B. Allow Triggers to Fire Others

C. Optimize for Ad hoc Workloads

D. Scan for Startup Procs

Correct Answer: C

The optimize for ad hoc workloads option is used to improve the efficiency of the plan cache for workloads that contain many single use ad hoc batches. When this option is set to 1, the Database Engine stores a small compiled plan stub in the plan cache when a batch is compiled for the first time, instead of the full compiled plan. This helps to relieve memory pressure by not allowing the plan cache to become filled with compiled plans that are not reused.
