QUESTION 1

You have a nightly process that loads millions of rows from an AS/400 system to a SQL Server Analysis Services (SSAS) cube. You need to design a partitioning strategy to ensure that new information can be added without reprocessing the entire cube. Which processing option should you use?

- A. Process Add by using an incremental table
- B. Process Index for the current partition
- C. Process Structure for the current cube
- D. Process Default for the current cube

Correct Answer: D

QUESTION 2

DRAG DROP

You need to implement the requirements for the StageFactSales package.

Which four actions should you perform in sequence (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Add a Data Flow task, then add a Microsoft Excel source to the task and configure it to use the connection manager.

Set the **FileNameColumnName** property of the source.

Add a MULTIFILE connection manager and configure it to load data from files named **GLSD*.csv**.

Add a MULTIFLATFORM connection manager and configure it to load data from files named **GLSD*.csv**.

Add an OLE DB destination and configure it to store the output of the source.

Add a Data Flow task, then add a Flat File source to the task and configure it to use the connection manager.

Correct Answer:

The screenshot shows a sequence of tasks and connection managers in a data integration tool. The tasks are:

- Add a Data Flow task, then add a Microsoft Excel source to the task and configure it to use the connection manager.
- Set the **FileNameColumnName** property of the source.
- Add an OLE DB destination and configure it to store the output of the source.
- Add a MULTIFLATFORM connection manager and configure it to load data from files named **GLSD*.csv**.
- Add a Data Flow task, then add a Flat File source to the task and configure it to use the connection manager.

The connection managers are:

- MULTIFILE connection manager and configure it to load data from files named **GLSD*.csv**.
- MULTIFLATFORM connection manager and configure it to load data from files named **GLSD*.csv**.

QUESTION 3

A hospital has a relational data warehouse, a SQL Server Analysis Services (SSAS) database, and a SQL Server Reporting Services (SSRS) instance. The SSAS database contains a cube named Pharmacy. Shared data sources exist in

SSRS for the relational and SSAS databases. Each hospital department has its own report writers.

Report writers in the Human Resources (HR) department want to create new reports by using Report Builder. Many reports will include data generated by a custom formula that references data stored either in a data warehouse table or in the

Pharmacy cube. The custom formula will compare time periods across multiple products, categories, and employees.

You have the following requirements:

Ensure that only the HR department report writers can access the custom formula.

Implement only one dataset.

Ensure that the dataset references the data source that will provide the fastest data retrieval.

You need to meet the requirements to support the HR department report writers.

What should you do(More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Create, deploy, and secure a shared dataset that references the data warehouse shared data source and includes custom Transact-SQL (T-SQL) code for the custom formula.
- B. Create a calculated member in the Pharmacy cube. Create, deploy, and secure a shared dataset that references the SSAS database shared data source and includes the calculated member from the cube.
- C. Create and secure in the data warehouse a stored procedure that implements the custom formula. Create and deploy a shared dataset that references the data warehouse shared data source.
- D. Create, deploy, and secure a shared dataset that references the SSAS database shared data source and includes a calculated member for the custom formula.

Correct Answer: B

QUESTION 4

You are developing the database schema for a SQL Server Analysis Services (SSAS) BI Semantic Model (BISM). The BISM will be based on the schema displayed in the following graphic.

You have the following requirements:

Ensure that queries of the data model correctly display average student age by class.

Ensure that the solution supports role-based security and partitions.

Minimize development effort.

You need to design the data model.

What should you do(More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Create a multidimensional project and define measures and a many-to-many dimensional relationship. Create partitions in SQL Server Management Studio (SSMS).
- B. Create a multidimensional project and define measures and a reference relationship. Create partitions in SQL Server Data Tools (SSDT).
- C. Create a tabular project and define measures. Create partitions in SQL Server Data Tools (SSDT).
- D. Create a tabular project and define calculated columns. Create partitions in SQL Server Management Studio (SSMS).

Correct Answer: A

QUESTION 5

You have a SQL Server Reporting Services (SSRS) 2008 instance integrated with an Internet-facing Microsoft SharePoint 2010 farm. PerformancePoint Services and Excel Services are installed and configured.

You need to upgrade to SSRS 2012 with the minimum downtime and hardware requirements.

What should you do?(More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Migrate SSRS content to a separate instance of SSRS 2012 on the same server.
- B. Perform an in-place upgrade of the SSRS environment.
- C. Migrate SSRS content to new servers that run SSRS 2012.
- D. Install SSRS 2012 on a new SharePoint farm and migrate content to the new farm.

Correct Answer: C
