QUESTION 1

You install a SQL Server Analysis Services (SSAS) instance in tabular mode on a server.

While processing a very large tabular model, you receive an out-of-memory error. You identify that the amount of physical memory in the server is insufficient. Additional physical memory cannot be installed in the server.

You need to configure the server to allow paging to disk by using the operating system page file (pagefile.sys).

Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Change the value of the **Memory VertiPagingPolicy** configuration option to **1**.

Change the value of the **OLAP Process AllowDiskPaging** configuration option to **1**.

Change the value of the **Memory VertiPagingPolicy** configuration option to **2**.

Restart the Analysis Services instance.

In Object Explorer, right-click the Analysis Services instance and then click **Properties**.

Change the value of the **Memory VertiPagingMemoryLimit** configuration option to **0**.

Select the **Show Advanced (All) Properties** checkbox.

Correct Answer:

In Object Explorer, right-click the Analysis Services instance and then click **Properties**.

Select the **Show Advanced (All) Properties** checkbox.

Change the value of the **Memory VertiPagingPolicy** configuration option to **1**.

Restart the Analysis Services instance.

Change the value of the **OLAP Process AllowDiskPaging** configuration option to **1**.

Change the value of the **Memory VertiPagingPolicy** configuration option to **2**.

Change the value of the **Memory VertiPagingMemoryLimit** configuration option to **0**.

**QUESTION 2**

You are designing a SQL Server Reporting Services (SSRS) report for a bank. The bank has Automated Teller Machines (ATMs) in several regions. ATM operational data is stored in a SQL Azure database. The report must use a map to display the location and status of the ATMs as shown in the following exhibit. (Click the Exhibit button.)

You need to ensure that the report displays only a user selected map region. Which source of spatial data should you use for the map?

- A. SQL Server spatial query
- B. Bing Maps layer
- C. ESRI shape file
- D. Map gallery

Correct Answer: A

QUESTION 3

You are modifying a SQL Server Analysis Services (SSAS) cube that aggregates mobile phone usage data from a Windows Azure SQL Database database. The existing database contains a device dimension.

The Research and Development team has requested that capabilities be added to the database.

The capabilities must meet the following requirements:

A device member must be able to have multiple capability members. A capability member must be able to belong to several device members. The Research and Development team must be able to create new capabilities every quarter in the

data source.

You need to implement the appropriate solution to meet the requirements while ensuring that the amount of development and maintenance time is minimized.

What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Add an attribute hierarchy for each capability to the customer dimension. Configure each hierarchy to have two members named Yes and No.
- B. Create a dimension named Capability Name and then configure a many-to-many relationship.
- C. Add an attribute hierarchy named Capability Name to the customer dimension.
- D. Create a dimension named Capability Name and then configure a regular relationship.

Correct Answer: B

QUESTION 4

You are using a new installation of SQL Server Reporting Services (SSRS) to create three sales reports that consume data from a stored procedure. The stored procedure is defined in a Windows Azure SQL Database.

All reports must pass USA to the Country parameter of the stored procedure. Users cannot change the Country report parameter value.

You need to configure the report parameter properties.

How should you configure the report parameter properties? To answer, select the appropriate setting or settings in the answer area.

Hot Area:

Report Parameter Properties

General

Available Values

Default Values

Advanced

Change name, data type, and other options.

Name:
Country

Prompt:
Country

Data type:
Text

☐ Allow blank value ("")

☐ Allow null value

☐ Allow multiple values

Select parameter visibility:

☒ Visible

☐ Hidden

☐ Internal

Correct Answer:

Report Parameter Properties

Change name, data type, and other options.

Name:
Country

Prompt:
Country

Data type:
Text

☐ Allow blank value (")

☐ Allow null value

☐ Allow multiple values

Select parameter visibility:

☒ Visible

☐ Hidden

☐ Internal

QUESTION 5

You are administering a SQL Server Analysis Services (SSAS) database on a server. The database hosts a financial cube based on a SQL Azure database.

You need to grant read access to the financial cube for all users in the group USA\PowerUsers.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Add the **USA\PowerUsers** group to the role. Set the cube access for the role to **Read**.

Add the **USA\PowerUsers** group to the role. Set the cube access for the role to **Select**.

Add the group **USA\PowerUsers** as a SQL Server login to the server.

In SQL Server Management Studio (SSMS), connect to the Database Engine instance on the server.

Add the **USA\PowerUsers** group to the role. Set the cube access for the role to **Read and Process**.

Create a new role for the database.

In SQL Server Management Studio (SSMS), connect to the SSAS instance on the server.

Correct Answer:

Add the **USA\PowerUsers** group to the role. Set the cube access for the role to **Select**.

Add the group **USA\PowerUsers** as a SQL Server login to the server.

In SQL Server Management Studio (SSMS), connect to the Database Engine instance on the server.

Add the **USA\PowerUsers** group to the role. Set the cube access for the role to **Read and Process**.

In SQL Server Management Studio (SSMS), connect to the SSAS instance on the server.

Create a new role for the database.

Add the **USA\PowerUsers** group to the role. Set the cube access for the role to **Read**.
