QUESTION 1

You are developing a Windows Store app. The app uses a model that contains the following code:

```
public class Customer
{
    public string FirstName
    {
        get; set;
    }
    public string LastName
    {
        get; set;
    }
}
```

You create a page named CustomerView. You define an object of type Customer named CustomerData.

You need to display data from CustomerData.

You have the following XAML markup:

```
<Grid Target 1
    Name="grdCustomer">
    <Grid.ColumnDefinitions>
        <ColumnDefinition Width="*" />
        <ColumnDefinition Width="3*" />
    </Grid.ColumnDefinitions>
    <Grid.RowDefinitions>
        <RowDefinition Height="50" />
        <RowDefinition Height="50" />
    </Grid.RowDefinitions>
    <TextBlock Name="lblFName" Grid.Column="0" Grid.Row="0"
        Text="First Name" FontSize="32"/>
    <TextBox Target 2
        Name="txtFName" Grid.Row="0" Grid.Column="1" />
    <TextBlock Name="lblLName" Grid.Column="0" Grid.Row="1"
        Text="Last Name" FontSize="32"/>
    <TextBox Target 3
        Name="txtLName" Grid.Row="1" Grid.Column="1" />
</Grid>
```

Which code snippets should you include in Target 1, Target 2, and Target 3 to complete the XAML markup? (To answer, drag the appropriate code snippets to the correct targets in the answer area. Each code snippet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

Code Snippets

```
DataContext="CustomerData"  
ItemsSource="CustomerData"  
Text="{Binding FirstName}"  
Text="{Binding LastName}"  
Content="{Binding FirstName}"  
Content="{Binding LastName}"
```

Answer Area

Target 1:	Code snippet
Target 2:	Code snippet
Target 3:	Code snippet

Correct Answer:

Code Snippets

```
ItemsSource="CustomerData"
```

```
Content="{Binding FirstName}"
```

```
Content="{Binding LastName}"
```

Answer Area

Target 1: `DataContext="CustomerData"`

Target 2: `Text="{Binding FirstName}"`

Target 3: `Text="{Binding LastName}"`

QUESTION 2

You need to ensure that the app resumes according to the requirements.

Which actions should you perform? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Retrieve new user content by using the `Window.Current.Dispatcher.ProcessEvents()` method in the `App_Resuming` event handler.
- B. Update the user interface by using the `Window.Current.Dispatcher.Invoke()` method in the `App_Resuming` event handler.
- C. Override the `OnLaunched` event handler.
- D. Retrieve new user content by using the `Window.Current.Dispatcher.ProcessEvents()` method in the `OnLaunched` event handler when the `ActivationKind` is `Launch`.
- E. Update the user interface by using the `Window.Current.Dispatcher.Invoke()` method in the `OnLaunched` event handler when the `ActivationKind` is `Launch`.
- F. Register the `App_Resuming` event handler for the `Resuming` event.

Correct Answer: AB

From scenario:

The app must meet the following technical requirements:

/ When the app resumes after a period of suspension, refresh the user interface, tile images, and data with current information from the web service.

QUESTION 3

You are developing a Windows Store app that will display a toast notification.

You need to ensure that when a toast notification is displayed, the first line of the notification is bold.

Which template should you use?

- A. TileSquareText03
- B. ToastText01
- C. TileSquarePeekImageAndText01
- D. ToastImageAndText02

Correct Answer: D

ToastImageAndText02

A large image, one string of bold text on the first line, one string of regular text wrapped across the second and third lines.

QUESTION 4

You are developing a Windows Store app. An XML document named tileXmlDocument contains the layout of the app tile.

You need to configure a tile notification that will display for 15 seconds.

Which code segments can you use to achieve this goal? (Each correct answer presents a complete solution. Choose all that apply.)

- A. `var tile = new TileNotification(tileXmlDocument);
tile.ExpirationTime = DateTime.Now.AddSeconds(15);`
- B. `var tileXmlElement = tileXmlDocument.CreateElement("tile");
tileXmlElement.SetAttribute("duration", "short");`
- C. `var tile = new TileNotification(tileXmlDocument);
Windows.Globalization.Calendar cal = new Windows.Globalization.Calendar();
cal.SetToNow();
cal.AddSeconds(15);
DateTimeOffset expiryTime = cal.GetDateTime();
tile.ExpirationTime = expiryTime;`
- D. `var tileXmlElement = tileXmlDocument.CreateElement("tile");
tileXmlElement.SetAttribute("duration", "15");`

A. B. C. D.

Correct Answer: AC

*

Example:

```
tileNotification.ExpirationTime = DateTimeOffset.UtcNow.AddMinutes(10);
```

*

This example specifies that the notification should appear in 3 hours. This example uses the DateTime object.

```
int dueTimeInHours = 3;
```

```
DateTime dueTime = DateTime.Now.AddHours(dueTimeInHours);
```

QUESTION 5

You are developing a Windows Store app that will be used to access large files stored online.

The files will be shared between users worldwide.

You need to recommend a solution to ensure that the users can download the files as quickly as possible.

Which storage solution should you recommend?

- A. a roaming folder
- B. Windows Azure Content Delivery Network (CDN)
- C. windows Azure Mobile Services
- D. SkyDrive

Correct Answer: B

The Microsoft Azure Content Delivery Network (CDN) offers developers a global solution for delivering high-bandwidth content that's hosted in Azure.
