QUESTION 1

You are employed as a developer at Certkingdom.com. Certkingdom.com has a single Active Directory domain, named Certkingdom.com.

You are making use of Visual Studio 2012 to create a new ASP.NET MVC application for Certkingdom.com. The application is configured to include pages for Windows Phone 7 users. These pages contain the _Layout.WP7.cshtml and

Index.WP7.cshtml files. You are required to make sure that the application suitably presents the files to Windows Phone 7 users. You therefore need to update the application.

Which of the following actions should you take?

A. You should consider updating the Application_Start method.

B. You should consider updating the Application_OnLaunched method.

C. You should consider updating the Application_OnSearchActivated method.

D. You should consider updating the Application_OnFileActivated method.

Correct Answer: A

QUESTION 2

You are designing an MVC web application.

You need to combine two existing models to create a view.

Which MVC component should you use?

A. View

B. Controller

C. Model

D. ViewModel

Correct Answer: D

QUESTION 3

You need to modify the application to meet the productId requirement. What should you do?

A. Modify the RegisterGlobalFilters method of the Global.asax.cs file as follows. Contract.Assume(productId != 0);

B. Modify the GetDealPrice method of ProductController as follows. Contract.Requires(productId > 0);

C. Modify the RegisterGlobalFilters method of the Global.asax.cs file as follows. Contract.Requires(productId > 0);

D. Modify the GetDealPrice method of ProductController as follows. Contract.Assume(productId > 0);

Correct Answer: B

Scenario: The value of the product Id property must always be greater than 0.

The GetDealPrice method, in the ProductController, has ProductID as input parameter.

Note: The Contract.Requires(Of TException) method specifies a precondition contract for the enclosing method or property, and throws an exception if the condition for the contract fails.

Syntax:

\\'Declaration

Public Shared Sub Requires(Of TException As Exception) (_ condition As Boolean _)

Type Parameters

TException

The exception to throw if the condition is false.

Parameters

condition

Type: System.Boolean

The conditional expression to test.

Incorrect:

Not D: The Contract.Assume method instructs code analysis tools to assume that a condition is true, even if it cannot be statically proven to always be true.

Reference: Contract.Requires(Of TException) Method (Boolean)

QUESTION 4

```
public class MyHub : Hub
{
    public void Hello(string message)
    {
        Clients.All.hello(message);
    }
}
```

You develop an ASP.NET MVC application. You plan to implement ASP.NET SignalR for real-time push notifications. The application includes the following class:

You need to display the message.

How should you complete the relevant code segment? To answer, drag the appropriate code segment to the correct location or locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split

bar between panes or scroll to view content.

Select and Place:

Code segments

```
$.connection.hub('local');

$.hubConnection();

$.hubConnection().connection.start();

hub.on('hello', function (message) {

hub.start('function', function (hello) {

con.createHubProxy('MyHub');

con.start();
```

Answer Area

```
<div>
    <script src="~/Script/jquery.js"></script>
    <script src="~/Script/jquery.signalR.js"></script>
    <div id="message"></div>
    <script type="text/javascript">
        $(function() {
            var con = [ Code segment ]
            var hub = [ Code segment ]
            [ Code segment ]
                $('#message').text(message);
            });
        });
    </script>
</div>
```

Correct Answer:

Code segments

```
$.connection.hub('local');

$.hubConnection().connection.start();

hub.on('hello', function (message) {

con.start();
```

Answer Area

```
<div>
    <script src="~/Script/jquery.js"></script>
    <script src="~/Script/jquery.signalR.js"></script>
    <div id="message"></div>
    <script type="text/javascript">
        $(function() {

            var c $.hubConnection();

            var h con.createHubProxy('MyHub');

            hub.start('function', function (hello) {

                $('#message').text(message);
            });
        });
    </script>
</div>
```

Box 1: $.hubconnection();

Create a connection.

Box 2: con.createHubProyxy(\\'MyHub\\');

Declare a proxy to reference the hub.

Box 3: hub.start()(\\'function\\', function(hello) {

Start the connection

QUESTION 5

You are employed as a developer at Certkingdom.com. Certkingdom.com has a single Active Directory domain, named Certkingdom.com.

You are making use of Visual Studio 2012 to create a new ASP.NET MVC web application for Certkingdom.com. You have been instructed to make sure that users can only insert JavaScript into a feedback text box.

You want to make sure that HTTP request values can be accessed without triggering request validation.

Which of the following actions should you take?

A. You should consider making use of the HttpRequest.HttpChannelBinding property.

B. You should consider making use of the HttpRequest.QueryString property.

C. You should consider making use of the HttpRequest.Unvalidated property.

D. You should consider making use of the HttpRequest.AnonymousID property.

Correct Answer: C
