QUESTION 1

HOTSPOT

A company develops a SharePoint app that employees use to submit expense reports. Employees can approve their own expenses for purchases less than \$100.

For expenses greater than \$100, the app will authenticate both itself and the user before approval is requested.

The expense reporting app includes the following code. Line numbers are included for reference only.

```

01 string contextTokenString = TokenHelper.GetContextTokenFromRequest(Request);
02 if (contextTokenString != null)
03 {
04     SharePointContextToken contextToken = TokenHelper.ReadAndValidateContextToken(contextTokenString,
Request.Url.Authority);
05     Uri sharepointUrl = new Uri(Request.QueryString["SPHostUrl"]);
06     string accessToken01 = TokenHelper.GetAccessToken(contextToken, sharepointUrl.Authority).AccessToken;
07     ClientContext clientContext = TokenHelper.GetClientContextWithAccessToken(sharepointUrl.ToString(),
accessToken01);
08     string accessToken02 = TokenHelper.GetAppOnlyAccessToken(contextToken.TargetPrincipalName,
sharepointUrl.Authority, contextToken.Realm).AccessToken;
09 }

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Hot Area:

Answer Area		Yes	No
The variable accessToken01 is used to retrieve the token for the User+app authorization policy type.	<input type="radio"/>	<input type="radio"/>	
The variable accessToken02 is used to retrieve the token for the User+app authorization policy type.	<input type="radio"/>	<input type="radio"/>	
The TokenHelper class can be used to implement User-only authorization.	<input type="radio"/>	<input type="radio"/>	

Correct Answer:

Answer Area

	Yes	No
The variable accessToken01 is used to retrieve the token for the User+app authorization policy type.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
The variable accessToken02 is used to retrieve the token for the User+app authorization policy type.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
The TokenHelper class can be used to implement User-only authorization.	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- * Token01 is used to retrieve the token for the User authorization policy only.
- * Token02 is used to retrieve the token for the User+App authorization polic.
- * Token01 is of the TokenHelper class. Token01 is used to retrieve the token for the User authorization policy only.

QUESTION 2

You need to create a set of workflows for a company.

The tool that creates the workflows has the following requirements:

The tool should allow for rapid development.

The tool should have the ability to deploy the workflow to SharePoint.

A workflow that is designed for one list or library should be re-usable by another list or library.

The designer should be able to create the workflow by using a graphical interface without the need to write code.

You need to recommend a tool for creating the workflows.

Which tool would you recommend?

- A.
SharePoint Designer
- B.
Visio
- C.
Napa
- D.
InfoPath

Correct Answer: A

To create a workflow based on the SharePoint 2013 Workflow platform

1.

Click the Workflows node in the Navigation pane.

2.

Click the List Workflow drop-down in the New section of the ribbon, as shown in the figure.

3.

Select the list that you want to associate with the new workflow.

4.

On the Create List Workflow dialog box, enter a name and description for the workflow and then make sure that the Platform Type is set to SharePoint 2013 Workflow, as shown in the figure.

5. Click OK to create the workflow. Now that the workflow is created, you can add Actions, Conditions, Stages, Steps, and Loops to build your workflow. These workflow components are available in the ribbon of SharePoint Designer 2013, as shown in the figure. Incorrect:

Not C: Napa does not support Workflow design through a graphical interface. Reference: Creating a workflow by using SharePoint Designer 2013 and the SharePoint 2013 Workflow platform <https://msdn.microsoft.com/en-us/library/office/jj554671.aspx>

QUESTION 3

You need to meet the requirements for data storage for the CourierMobile app and the CloudMananger app.

Which technologies should you use? (Each correct answer presents part of the solution. Choose all that apply.)

A. Windows Azure SQL Database

B. SharePoint content database

C. Secure Store

D. SQL Server Express LocalDB

E. SharePoint list

Correct Answer: AD

A: SQL Azure in the cloud.

D: LocalDB is a lightweight version of Express that has the same programmability features, but it runs in user mode and has a fast, zero-configuration installation and a short list of prerequisites.

From scenario:

*

CourierMobile App

The CourierMobile app must be able to capture more than 30 million data points of location data daily as they occur and upload the location data to the cloud when connected to the Internet.

*

Cloudmanager App

/ The CloudManager app must elastically scale to capture courier location data as the number of bicycle couriers increases or decreases.

/ The CloudManager app must process bicycle courier location data from a data store capable of storing more than 30 million items.

QUESTION 4

You plan to create a workflow design by using Microsoft Visio 2013 and then import the design into SharePoint Designer 2013.

You need to ensure that you have branching capability. Which shape should you use?

- A. Assign a Task
- B. Stage
- C. Loop
- D. Step

Correct Answer: B

A stage can contain any number of shapes and may include branching.

QUESTION 5

You create a branding package for Contoso, Ltd. You export the design package from the development environment. The solution you build uses custom query rules and result types. You activate the following features:

SharePoint Server Publishing Infrastructure

Search Config Data Content Types

Search Config Site Columns

Search Config Template

You import the package into the production environment. You observe that the search configuration did not import properly, and some images are missing.

You need to ensure that search and branding work properly on the production server.

Which two actions should you perform? Each correct answer presents part of the solution.

A.

Check in and publish all design assets. Export the package.

B.

Import the package. Check in and publish all design assets.

C.

On the development server, activate the Search Config List Instance feature. Export the design package.

D.

On the production server, activate the Search Config List Instance feature. Import the design package.

Correct Answer: BC

* Search Config List Instance Features

Provisions a list to enable the import and export of Search Configurations.
