QUESTION 1

You have a newly installed Microsoft Visual Studio Team Foundation Server (TFS). Both TFS and SQL server are installed on the same server. The SQL server installation includes the database engine component only. You need to utilize all available TFS Reporting features.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Install SQL Analysis Services.
- B. Enable Data Quality Services.
- C. Install SQL Server Reporting Services.
- D. Install SQL Server Client Tools Connectivity.

Correct Answer: AC

QUESTION 2

Your company uses Microsoft Visual Studio Team Foundation Server (TFS). You have permissions to modify work items.

The current product backlog item WIT is functioning properly. However, the product owner needs to track each product backlog item's estimated value to the company. The company has a system that ranks value by using a grading system of

A-E. The company needs a new field in the product backlog item that captures this system and only allows A-E.

You need to modify the product backlog item WIT on the server.

Which two actions should you perform? Each correct answer presents a complete solution.

- A. Use the TFS administration console to add a field product backlog item WIT.
- B. Use the process template manager, and download the process template. Use the process template editor to edit the WIT. Upload the edited template as a new process template.
- C. Use the process template editor to add a field to the existing WIT.
- D. Use witadmin.exe to download the XML Edit the XML to add the field, and use witadmin to upload the edited XML document.

Correct Answer: AB

QUESTION 3

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) 2012 server. You have a development team named Dev1 that is already using the server.

You hire a second development team named Dev2.

You need to ensure that the development activities of Dev2 are completely isolated from those of Dev1.

What should you do?

- A. Use the TFS Administration Console to create a new team project collection for Dev2.
- B. Run the TFSSConfig collection /create [name] command.
- C. Use the TFS Administration Console to branch a new team project collection for Dev2 from the one used by Dev1.
- D. Use Visual Studio Team Explorer 2012 to create a new team project collection for Dev2.

Correct Answer: A

QUESTION 4

Your software development team works within a single team project in a team project collection. You have one build controller and one build agent associated to your team project collection.

Multiple build definitions are configured. You notice that builds occasionally wait in the queue for a long time before the build starts.

You need to reduce the amount of time that your builds wait in the queue.

What should you do?

- A. Change the Name filter argument on your build definition so that the build agent is found more quickly.
- B. Configure your build agent to run multiple builds at the same time.
- C. Configure additional build controllers, and associate them to the build agent already in use.
- D. Configure additional build agents, and associate them to the build controller already in use.

Correct Answer: B

<http://social.msdn.microsoft.com/Forums/vstudio/en-US/b6d12dfa-5481-41d5-8012-1f19277b358c/tfs-2012-build-taking-a-lot-of-time?forum=tfsbuild>

QUESTION 5

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) 2012 server with one project collection and multiple build machines.

A development team installs and configures a build service on a new build machine.

You need to be able to validate that the installation and configuration meets your organization's requirements and follows its best practices.

At which service would you perform the following tasks? (To answer, drag the appropriate build component to the correct standards- checking task in the answer area. Each build component may be used once, more than once, or not at all.)

Select and Place:

| Build Component | Standards Checking Task |
|------------------|---|
| Build Service | Validate that path was configured so customized build templates find their assembly references. |
| Build Agent | Validate that proper tags were used to route build requests to appropriate machines. |
| Build Controller | Validate that your standard working directory paths are being used. |
| | Validate that builds will support coded UI tests. |

Correct Answer:

| Build Component | Standards Checking Task |
|------------------|---|
| Build Service | Validate that path was configured so customized build templates find their assembly references. |
| Build Agent | Validate that proper tags were used to route build requests to appropriate machines. |
| Build Controller | Validate that your standard working directory paths are being used. |
| | Validate that builds will support coded UI tests. |
