QUESTION 1

You create a layered web application. The service layer includes a suite of NUnit tests for the code. The web application contains JavaScript and has no tests.

You configure a build agent running as a service and create an automated build.

You need to include unit testing in the development and automated build of the application. You need to achieve this goal with the least amount of impact to the development team.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Configure the build to use the existing NUnit tests.
- B. Create QUnit tests to test the Javascript in the web application.
- C. Use Coded UI Tests to test the JavaScript in the web application.
- D. Convert all the NUnit tests for the business logic layer into MSTests.

Correct Answer: AB

QUESTION 2

You are the application architect on your team. You have a straightforward architecture consisting of an ASP.NET MVC Web Application that depends on a Class Library, which contains the Business Logic. The Business Logic uses another Class Library that contains the Data Access code.

No code in the UI should ever use the Data Access library directly.

You need to enforce this architectural requirement.

Which Visual Studio tool should you use?

- A. Layer Diagram
- B. Directed Graph Document
- C. Dependency Graph
- D. UML Component Diagram

Correct Answer: A

Ref: <http://msdn.microsoft.com/en-us/library/dd409462.aspx>

QUESTION 3

You are a scrum master.

You need to lead the daily scrum meeting.

Which three questions should you ask? (Each correct answer presents part of the solution. Choose three.)

- A. What will be done before the next meeting?
- B. What went well?
- C. What has been accomplished since the last meeting?
- D. Are there any potential improvements?
- E. What obstacles are in the way?
- F. Is the burndown up to date?

Correct Answer: ACE

The most popular technique that Development Teams use during the Daily Scrum is to stand in a circle facing each other. Each developer, in turn, answers the following three questions:

1.
What have I done since the last Scrum?
2.
What will I do between now and the next Scrum?
3.
What impediments are in my way?

Professional Scrum Development with Microsoft Visual Studio 2012 p.21

QUESTION 4

You are using the Microsoft Visual Studio Scrum 2.0 process template. You recently finished a sprint.

You need to conduct a retrospective meeting prior to planning the next sprint.

What should you do?

- A. Analyze and revise the story points of the work items completed in the previous sprint.
- B. Analyze the previous sprint to identify what the team is going to do differently during the next sprint.
- C. Analyze items in the product backlog for the next sprint.
- D. Determine which items have been finished on the previous sprint.

Correct Answer: C

QUESTION 5

Your development team uses the Microsoft Visual Studio Scrum 2.0 process template.

The team has identified items from the product backlog for the next sprint.

You need to ensure that the team has adequate capacity to complete the next sprint.

Which three actions should you perform? (Each correct answer presents part of the solution.

Choose three.)

- A. Review the sprint Burndown chart.
- B. Have the team assign hour estimates to each sprint task.
- C. Review the sprint backlog.
- D. Assign story points to each item in the product backlog.
- E. Review the product backlog with forecast set to On to determine if the sprint can be completed based on the team's velocity.
- F. Set each team member's per day capacity.

Correct Answer: CEF

Sprint Burndown charts can show the team how much work remains in the Sprint. These charts will often include an ideal trend line. This line represents the ideal rate at which the Development Team is able to complete all of the remaining effort, at a constant rate, by the end of the Sprint.

Professional Scrum Development with Microsoft Visual Studio 2012 p.283 Prior to the Sprint, there shouldn't be any Task work items in the Sprint Backlog. Ideally, the Development Team creates its tasks during the Sprint Planning meeting and not before. Professional Scrum Development with Microsoft Visual Studio 2012 p.175

The Sprint Backlog contains those items selected by the Development Team plus a plan for delivering them. The Sprint Backlog shows the work remaining in the Sprint at all times. Professional Scrum Development with Microsoft Visual Studio 2012 p.4

Story points should be already assigned to PBIs during identification for the sprint.
