QUESTION 1

You use Microsoft .NET Framework 4 to create a Windows Presentation Foundation (WPF) application.

The application contains a window named Window1. Window1 contains several controls of the Label, TextBox, and Button types. You create the following style in a Window.Resources element:

```
<Style x:Key="Style1">  
  <Setter Property="Control.Foreground" Value="Blue" />  
  <Setter Property="Control.FontSize" Value="20" />  
</Style>
```

You need to define a style named Style2 that meets the following requirements:

Has a blue background

Uses the same settings as Style1

Can only be applied to the TextBox controls

How should you complete the style? (To answer, drag the appropriate elements to the correct locations. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

```
<Style  
  x:Key="Style2"  
  TargetType="Element TextBox)"  
  Element="{ Element Style1}">  
  <Setter Property="Background" Value="Red" />  
</Style>

Correct Answer:
