QUESTION 1

You use Microsoft .NET Framework 4 to create a Windows Forms application.

The application has a reference to a Windows Presentation Foundation (WPF) class library named Library1. Library1 contains a WPF user control named UserControl1. You add the following code to the application:

```
01 public partial class Form1 : Form
02 {
03     public Form1()
04     {
05         InitializeComponent();
06     }
07     private void Form1_Load(object sender, EventArgs e)
08     {
09
10         host.Dock = DockStyle.Fill;
11         UserControl1 uc = new UserControl1();
12         host.Child = uc;
13         this.Controls.Add(host);
14     }
15 }
16
```

You need to ensure that you can add the instance of UserControl1 to a control named host in Form1. Which code segment should you insert at line 09?

- A. `WindowsFormsHost host = new WindowsFormsHost ();`
- B. `ContainerControl host = new ContainerControl();`
- C. `Panel host = new Panel();`
- D. `ElementHost host = new ElementHost();`

Correct Answer: D

QUESTION 2

You are developing a Microsoft .NET 4 application.

You need to ensure that security error trapping handles transparency violations.

What should you do?

- A. Handle all thrown transparency violations explicitly.
- B. Handle only `SecurityAction.Demand` transparency violations.
- C. Handle only `SecurityAction.Assert` transparency violations.
- D. Handle only `SecurityAction.PermitOnly` transparency violations.

Correct Answer: A

QUESTION 3

You use Microsoft .NET Framework 4 to create a Windows Presentation Foundation (WPF) application. You write the following code fragment.

```
<Window x:Class="MyProject.MainWindow" xmlns:local="clr-namespace:MyProject">
  <Window.Resources>
    <local:AverageConverter x:Key="avgConverter" />
  </Window.Resources>
<StackPanel Orientation="Vertical">
  <Slider x:Name="sld01" Minimum="0" Maximum="100" />
  <Slider x:Name="sld02" Minimum="0" Maximum="50" />
  <Slider x:Name="sld03" Minimum="0" Maximum="50" />
  <TextBlock>
    <TextBlock.Text>
      <MultiBinding Converter="{StaticResource avgConverter}">
        <Binding ElementName="sld01" Path="Value" />
        <Binding ElementName="sld02" Path="Value" />
        <Binding ElementName="sld03" Path="Value" />
      </MultiBinding>
    </TextBlock.Text>
  </TextBlock>
</StackPanel>
</Window>
```

You need to implement the `MyProject.AverageConverter` class. What should you do?

- A. Inherit from the `TypeConverter` class
- B. Apply the `TypeConverterAttribute` attribute
- C. Implement the `IValueConverter` interface
- D. Implement the `IMultiValueConverter` interface

Correct Answer: D

QUESTION 4

You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to create a Windows Presentation Foundation (WPF) application.

You create a WPF window in the application.

You add the following code segment to the application.

```
Public Class ViewModel
    Public Property Data() As ICollectionView
        Get
        End Get
        Set
        End Set
    End Property
End Class

Public Class BusinessObject
    Public Property Name() As String
        Get
        End Get
        Set
        End Set
    End Property
End Class
```

The DataContext property of the window is set to an instance of the ViewModel class. The Data property of the ViewModel instance is initialized with a collection of BusinessObject objects.

You add a TextBox control to the window.

You need to bind the Text property of the TextBox control to the Name property of the current item of the ICollectionView of the DataContext object.

You also need to ensure that when a binding error occurs, the Text property of the TextBox control is set to N/A.

Which binding expression should you use?

- A. {Binding Path=Data/Name, FallbackValue=\\'N/A\\' }
- B. {Binding Path=Data.Name, FallbackValue=\\'N/A\\' }
- C. {Binding Path=Data/Name, TargetNullValue=\\'N/A\\' }
- D. {Binding Path=Data.Name, TargetNullValue=\\'N/A\\' }

Correct Answer: A

QUESTION 5

You are developing a Windows Presentation Foundation (WPF) application for a travel reservation system.

You need to ensure that users can select a range of travel dates.

What should you do?

- A. Add a single DatePicker control to the design surface.
- B. Add a single Calendar control to the design surface.
- C. Add a single MediaElement control to the design surface to display a calendar.

D. Add the appropriate Windows Forms references to the project references. Add a single Windows Forms DateTimePicker control to the design surface.

Correct Answer: B
