QUESTION 1

You are developing a Windows Communication Foundation (WCF) service that contains the following operation contract.

[OperationContract]

CustomerNames GetCustomerNames();

The operation returns customer names.

You need to develop a definition for the operation contract that produces XML with the following structure.

```
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
  <s:Header />
  <s:Body>
    <Names xmlns=http://tempuri.org/
      xmlns:a="http://schemas.microsoft.com/2003/10/Serialization/Arrays"
      xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
      <a:string>Customer1</a:string>
      <a:string>Customer2</a:string>
      <a:string>Customer3</a:string>
    </Names>
  </s:Body>
</s:Envelope>
```

Which code segment should you use?

- A. [DataContract(IsWrapped = false)] public class CustomerNames { [MessageBodyMember] public string[] Names; }
- B. [DataContract(WrapperName = "")] public class CustomerNames { }
- C. [MessageBodyMember] public string[] Names; }
- D. [DataContract] public class CustomerNames { [DataMember] public string[] Names; }
- E. [DataContract] public class CustomerNames { }
- F. [DataMember(IsRequired = false)] public string[] Names; }

Correct Answer: A

QUESTION 2

A Windows Communication Foundation (WCF) service has the following contract.

```
<ServiceContract (Namespace:="http://contoso.com") >
Public Interface IShipping

    <OperationContract () >
    Function DoWork (ByVal id As Integer) As String

End Interface
```

This is one of several service contracts hosted by your application. All endpoints use SOAP 1.2 bindings with WS-Addressing 1.0. The System.ServiceModel.MessageLogging trace source in the system.diagnostics configuration section is configured with one listener.

You need to make sure that only the messages that are returned from the DoWork operation are logged.

Which XML segment should you add to the

system.serviceModel/diagnostics/messageLogging/filters configuration element?

- A. `odd xmlns:soap="http://www.u3.org/2003/05/soap-envelope"> //soap:Action[text() = \\http://contoso.com/IShipping/DoWorkResponse\\]`
- B. `//addr:Action[text() `http://contoso.com/IShipping/DoWorkResponse\\`]`
- C. `//addr:Action[text() = \\http://contoso.com/IShipping/DoUork\\`]`
- D.
