SATISFACTION GUARANTEED 100%

QUESTION 1

You are designing a Windows Presentation Foundation (WPF) application. The main window of the WPF application includes two panels: panel1 and panel2.

The WPF application must meet the following requirements:

Panel2 must be enabled only after users have entered values into multiple text boxes in panel1.

The background color of panel2 must be set to a specific color based on one of the text box values in panel1.

The background color of panel2 must be set at the same time the panel is enabled.

You need to recommend an approach for meeting the requirements.

What should you recommend?

A. Use a Command object.

B. Use Dependency properties.

C. Use a DataTemplate object.

D. Use a MultiDataTrigger object.

Correct Answer: C

QUESTION 2

You are designing a Windows application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010.

You plan to add a feature to the application. The application will be used in several different locales. The application will send data to a centralized server and log the date and time information.

You need to ensure that the date and time information includes the local Universal Time Coordinate (UTC) offset value. Which class should you use?

A. CultureInfo

B. DateTimeOffset

C. CultureInfoConverter

D. DateTimeOffsetConverter

Correct Answer: B

QUESTION 3

You are designing an application by using Windows Presentation Foundation (WPF) and Microsoft .NET Framework 4.

The application will run on Windows 7-based kiosks that are located indoors and outdoors. The kiosk displays have a photo sensor that will update the application with the current ambient luminosity.

You need to ensure that the user interface (UI) of the application dynamically changes the application theme based on the ambient luminosity.

What should you use?

A. a visual state manager to add VisualStateGroup objects

B. a VisualBrush control to paint the UI

C. a RenderTransform control applied to the root canvas

D. an attached behavior to change a merged resource dictionary

Correct Answer: D

QUESTION 4

You are analyzing an application that uses Microsoft .NET Framework 4 and Microsoft SQL Server 2008.

The application is used to maintain an inventory database and is accessed from several remote Windows client applications. The application frequently updates multiple rows in a database table by using a DbDataAdapter object.

Users report that the application runs slowly during peak business hours.

When large number of records are changed by multiple users, you discover the following:

The CPU utilization of the client applications is normal.

The network utilization increases slightly.

The CPU utilization of the database server remains close to the normal average for a day.

You need to resolve the performance issue. What should you do?

A. Disable batch updates. Modify the client application to perform a single update.

B. Insert a random time interval between updates.

C. Remove any limit on batch update sizes. Modify the client application to perform a single update.

D. Move the update method calls to a separate BackgroundWorker thread.

Correct Answer: C

QUESTION 5

You are designing a Windows application by using Microsoft .NET Framework 4, Microsoft Visual Studio 2010, and Microsoft SQL Server 2008.

You need to design a data access strategy that meets the following requirements: Automatically tracks changes Maps the database data model to the object model

Which data access technology should you use?

A. LINQ to SQL

B. LINQ to XML

C. ADO.NET DataSet

D. ADO.NET DataReader

Correct Answer: A
