QUESTION 1

You are designing an ASP.NET Web application for display on desktop computers and on mobile devices. You have the following requirements:

Present a full-featured interface to users of desktop computers that include many interaction options and graphical buttons.

Present a simple interface to users of mobile devices that do not include bandwidth-intensive elements.

You need to design the Web application to meet the requirements. Which two approaches should you recommend? (Each correct answer presents part of the solution? Choose two.)

A.

Create two separate skins for desktop and mobile user interfaces

B.

Create two separate themes for desktop and mobile user interfaces

C.

In the PreRender method of the Web application's master page, test Request.Browser.MobileDeviceModel and switch to the appropriate interface.

D.

Create a System.Web.UI.Page subclass that all Web application pages inherit from. In the Page_PreInit method, test Request.Browser.IsMobileDevice and switch to the appropriate interface

Correct Answer: BD

QUESTION 2

You are designing an ASP.NET Web application.

You need to recommend an approach for restricting access to internal application state information.

What should you do?

A. Set the trust level to Medium.

B. Disable tracing and debugging.

C. Install a certificate and enable SSL.

D. Deploy a P3P policy to the Web site.

Correct Answer: B

QUESTION 3

You are designing the deployment process for a new ASP.NET Web application.

You need to ensure that the application is protected from modification after deployment.

Which approach should you recommend?

- A. Use MSDeploy.
- B. Use the Web Deployment tool.
- C. Use a Web Deployment project.
- D. Use the ASP.NET Compilation tool.

Correct Answer: D

QUESTION 4

You need to design the application to support the news feature. Which approach should you recommend?

- A. Use the FileResult class and return the result as a plain text file.
- B. Use the ViewResult class and bind the items to an HTML.TextArea HTML Helper.
- C. Use a custom ActionResult class and return the output stream as the return value.
- D. Use a custom ActionResult class and bind the items to an HTML.TextArea HTML Helper.

Correct Answer: C

QUESTION 5

You have an ASP.NET Web application that is deployed on multiple, identical Web servers. The Web servers retrieve data from multiple, identical Microsoft SQL Server databases. Each user maintains an active Web application session during the entire business day.

You notice that some Web servers consume 100 percent of their CPU resources and return timeout errors, while other Web servers are idle.

You need to design a plan to load-balance the Web application across the available Web servers. Which approach should you recommend?

- A. Use affinity load balancing with SQLServer session state.
- B. Use affinity load balancing with StateServer session state.
- C. Use per-request load balancing with InProc session state.

D. Use per-request load balancing with StateServer session state.

Correct Answer: D
