### QUESTION 1

Users report that after periods of inactivity the website is slow to render pages and to process sign-in attempts.

You need to ensure that the website is always responsive.

What should you do?

- A. Add the following markup at line WC14:
- B. Add the following markup at line WC08:
- C. Add the following markup at line WC14:
- D. In the Azure management portal, enable Always On support for the website.
- E. In the Azure management portal, disable Always On support for the website.

Correct Answer: A

---

### QUESTION 2

Which of the following is the cloud characteristic that speeds up development, deployment and overall time of market?

- A. Rapid elasticity
- B. Cloud bursting
- C. Universal access
- D. Network pooling

Correct Answer: A

Rapid elasticity is a cloud computing term for scalable provisioning, or the ability to provide scalable services. Experts point to this kind of scalable model as one of five fundamental aspects of cloud computing. Rapid elasticity allows users to automatically request additional space in the cloud or other types of services.

---

### QUESTION 3

You need to ensure that users can upload transcripts and notes.

Solution: You use Azure Resource Manager (ARM) to provision a storage account, and then use the Azure portal to create an Azure file share.

Does the solution meet the goal?

- A. Yes

B. No

Correct Answer: B

Explanation

---

#### QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are developing a new Azure Logic App. The Logic App requires a custom action to evaluate data from an internal, proprietary system. You create a custom ASP>NET Web API to retrieve data from the system and update the Logic App to

use the API.

The Logic App generates a timeout error when it requests data from the API.

You need to eliminate the timeout error and allow the Logic App to retrieve data by using the API.

What should you do?

- A. Update the API to immediately return an HTTP '102 PROCESSING' response when a request is received and an HTTP '205 RESET CONTENT' response when the data is returned from the system.
- B. Update the Logic App to use a new HTTPWebhook trigger to call out to the API's newlycreated subscribe and unsubscribe methods.
- C. Update the API to immediately return an HTTP '202 ACCEPTED' response when a request is received and an '200 OK' response when the data is returned from the system.
- D. Update the Logic App adding a wait action to include the interval object's unit and count properties set to valid values.

Correct Answer: C

---

#### QUESTION 5

You store data in an Azure blob. Data accumulates at a rate of 0.10 GB per day.

You must use storage analytics data to verify that the service level agreement (SLA) has been met and to analyze the performance of VHDs, including the pattern of usage.

Analytics data must be deleted when it is older than 100 days or when the total amount of data exceeds 10 GB.

You need to configure storage analytics and access the storage analytics data.

Which two approaches will achieve the goal? Each correct answer presents part of the solution.

- A. Disable the data retention policy.
- B. Access analytics data by using the Service Management REST APL
- C. Access analytics data by using the APIs used to read blob and table data.
- D. Configure a data retention policy of 100 days.

Correct Answer: CD
