QUESTION 1

HOTSPOT

You plan to deploy a web app in an Azure App Service. The web app must use a database to store data and minimize monthly recurring costs.

You need to ensure that you can perform scheduled backups that includes the web app and database.

How should you configure the web app App Service? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Web App option	Configured setting				
App Service plan tier	<table border="1"><tr><td>Shared</td></tr><tr><td>Basic</td></tr><tr><td>Standard</td></tr><tr><td>Premium</td></tr></table>	Shared	Basic	Standard	Premium
Shared					
Basic					
Standard					
Premium					
Database type	<table border="1"><tr><td>Azure Cosmos DB</td></tr><tr><td>Azure Database for MySQL</td></tr><tr><td>Azure HDInsight cluster</td></tr></table>	Azure Cosmos DB	Azure Database for MySQL	Azure HDInsight cluster	
Azure Cosmos DB					
Azure Database for MySQL					
Azure HDInsight cluster					

Correct Answer:

Answer Area

Web App option

Configured setting

App Service plan tier

Shared
Basic
Standard
Premium

Database type

Azure Cosmos DB
Azure Database for MySQL
Azure HDInsight cluster

Box 1: Standard.

The Backup and Restore feature requires the App Service plan to be in the Standard tier or Premium tier.

We choose Standard as we want to minimize the cost.

Box 2: Azure Database for MySQL

The following database solutions are supported with backup feature:

SQL Database

Azure Database for MySQL (Preview)

Azure Database for PostgreSQL (Preview)

MySQL in-app

References: <https://docs.microsoft.com/en-us/azure/app-service/web-sites-backup>

QUESTION 2

DRAG DROP Your company manages several Azure Web Sites that are running in an existing webhosting plan named plan1. You need to move one of the websites, named contoso, to a new web-hosting plan named plan2. Which Azure PowerShell cmdlet should you use with each PowerShell command line? To answer, drag the appropriate Azure PowerShell cmdlet to the correct location in the PowerShell code. Each PowerShell cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

PowerShell cmdlets

New-AzureResource

Set-AzureResource

plan1

plan2

Microsoft.Web/serverFarms

Microsoft.Web/sites

PowerShell code

```
PS C:\> $props = @("serverfarm" = PowerShell cmdlet ")
PS C:\> PowerShell cmdlet -name contcso
-ResourceGroup group1 -PropertyObject $props -ResourceType
PowerShell cmdlet -apiversion 2014-04-01
```

Correct Answer:

PowerShell cmdlets

New-AzureResource

plan1

Microsoft.Web/serverFarms

PowerShell code

```
PS C:\> $props = @("serverfarm" = plan2 ")
PS C:\> Set-AzureResource -name contcso
-ResourceGroup group1 -PropertyObject $props -ResourceType
Microsoft.Web/sites -apiversion 2014-04-01
```

Example: The following command is actually a series of commands (delimited by semi-colons) that change the values of the properties in the \$p variable. Windows PowerShell PS C:\> \$p.siteMode = "Basic"; \$p.sku = "Basic"; \$p.computeMode = "Dedicated"; \$p.serverFarm = "Default2" The next command uses the Set-AzureResource cmdlet to change the change the properties of the ContosoLabWeb2 web site. The value of the PropertyObject parameter is the \$p variable that contains the Properties object and the new values. The command saves the output (the updated resource) in the \$r2 variable. Windows PowerShell PS C:\> \$r2 = Set-AzureResource -Name ContosoLabWeb2 -ResourceGroupName ContosoLabsRG -ResourceType "Microsoft.Web/sites" -ApiVersion 2004-04-01 -PropertyObject \$p

QUESTION 3

Your company plans to migrate from On-Premises Exchange to Office 365.

The existing directory has numerous service accounts in your On-Premises Windows Active Directory (AD), stored in separate AD Organizational Units (OU) for user accounts.

You need to prevent the service accounts in Windows AD from syncing with Azure AD.

What should you do?

- A. Create an OU filter in the Azure AD Module for Windows PowerShell.
- B. Configure directory partitions in miisclient.exe.
- C. Set Active Directory ACLs to deny the DirSync Windows AD service account MSOL_AD_SYNC access to the service account OUs.
- D. Create an OU filter in the Azure Management Portal.

Correct Answer: B

One customer, who was looking for OU level filtering to import selected users from On-Premises active directory to Office365. Configure OU level filtering for Office365 directory synchronization.

1.
Logged in to your Domain controller
2.
Created an OU (Organisational Unit) from your AD (Active Directory) a. In my case I named it "DirSync"
3.
Move all those users you want to sync, to that DirSync OU.
4.
From your DirSync Server navigate to \Program Files\Microsoft Online Directory Sync\SYNCBUS\Synchronization Service\UIShell
5.
Double click on miisclient.exe
6.
This opens a console something similar to the below screen capture
7.
Identity Manager, click Management Agents, and then double-click SourceAD.
8.
Click Configure Directory Partitions, and then click Containers, as shown in the below screen capture.
9.
Click OK on the SourceAD Properties page.
- 10.

Perform a full sync: on the Management Agent tab, right-click SourceAD, click Run, click Full Import Full Sync, and then click OK. Etc References: <http://blogs.msdn.com/b/denotation/archive/2012/11/21/installing-and-configure-dirsync-without-level-filtering-for-office365.aspx>

The screenshot shows the Synchronization Service Manager interface. The main window displays a table of Management Agent Operations. The table has columns for Name, Profile Name, Status, Start Time, and End Time. The operations listed include TargetWebService and SourceAD with various profile names like 'Delta Confirming Imp' and 'Delta Import Delta S'. The status of these operations varies, with some being 'stopped-server-down' and others 'success'. Below the table, there is a section for 'Profile Name: Delta Confirming Imp. User Name: DIRSYNC.MS.Service'. This section includes 'Step Type: Delta Import and Delta Synchronization', 'Start Time: 11/20/2012 5:18:06 AM', 'End Time: 11/20/2012 5:18:21 AM', and 'Status: stopped-server-down'. At the bottom, there are two panes: 'Synchronization Statistics' and 'Synchronization Errors'. The 'Synchronization Statistics' pane shows counts for Staging (Unchanged, Adds, Updates, Renames, Deletes) and Inbound Synchronization (Projections, Joins). The 'Synchronization Errors' pane is currently empty.

Name	Profile Name	Status	Start Time	End Time
TargetWebService	Delta Confirming Imp	stopped-server-down	11/21/2012 2:24:57 AM	11/21/2012 2:25:15 AM
SourceAD	Delta Import Delta S	success	11/21/2012 2:24:56 AM	11/21/2012 2:25:57 AM
SourceAD	Export	success	11/21/2012 1:53:26 AM	11/21/2012 1:53:26 AM
SourceAD	Full Sync	success	11/21/2012 1:53:11 AM	11/21/2012 1:53:15 AM
TargetWebService	Delta Confirming Imp	stopped-server-down	11/20/2012 11:22:57 PM	11/20/2012 11:23:21 PM
SourceAD	Delta Import Delta S	success	11/20/2012 11:22:56 PM	11/20/2012 11:22:57 PM
TargetWebService	Delta Confirming Imp	stopped-server-down	11/20/2012 8:20:58 PM	11/20/2012 8:21:27 PM
SourceAD	Delta Import Delta S	success	11/20/2012 8:20:57 PM	11/20/2012 8:20:58 PM
TargetWebService	Delta Confirming Imp	stopped-server-down	11/20/2012 5:18:57 PM	11/20/2012 5:19:12 PM
SourceAD	Delta Import Delta S	success	11/20/2012 5:18:57 PM	11/20/2012 5:18:57 PM
TargetWebService	Delta Confirming Imp	stopped-server-down	11/20/2012 2:17:13 PM	11/20/2012 2:17:13 PM
SourceAD	Delta Import Delta S	success	11/20/2012 2:16:58 PM	11/20/2012 2:16:58 PM
TargetWebService	Delta Confirming Imp	stopped-server-down	11/20/2012 11:15:15 AM	11/20/2012 11:15:15 AM
SourceAD	Delta Import Delta S	success	11/20/2012 11:14:58 AM	11/20/2012 11:14:58 AM
TargetWebService	Delta Confirming Imp	stopped-server-down	11/20/2012 8:13:10 AM	11/20/2012 8:13:10 AM
SourceAD	Delta Import Delta S	success	11/20/2012 8:12:59 AM	11/20/2012 8:12:59 AM
TargetWebService	Delta Confirming Imp	stopped-server-down	11/20/2012 5:18:21 AM	11/20/2012 5:18:21 AM
SourceAD	Delta Import Delta S	success	11/20/2012 5:18:06 AM	11/20/2012 5:18:06 AM

Profile Name: Delta Confirming Imp. User Name: DIRSYNC.MS.Service

Step Type: Delta Import and Delta Synchronization Priority: default

Start Time: 11/20/2012 5:18:06 AM End Time: 11/20/2012 5:18:21 AM Status: stopped-server-down

Synchronization Statistics		Synchronization Errors	
Staging			
Unchanged	0		
Adds	0		
Updates	0		
Renames	0		
Deletes	0		
Inbound Synchronization			
Projections	0		
Joins	0		

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy a Kubernetes Azure Container Service cluster.

You need to manage the cluster by using the Kubernetes command-line client.

Solution: You run the following Azure Command-Line Interface (Azure CLI) command: `az aks install-cli`

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: B

The Azure CLI 2.0 is a command-line tool providing a great experience for managing Azure resources. The CLI is designed to make scripting easy, flexibly query data, support long-running operations as non-blocking processes, and more.

Instead, the `az acs dcoss install-cli` command is used to download and install the DC/OS command-line tool for a cluster.

References: <https://docs.microsoft.com/en-us/cli/azure/acs?view=azure-cli-latest>

QUESTION 5

You administer an Azure Web Site named `contoso`. The development team has implemented changes to the website that need to be validated.

You need to validate and deploy the changes with minimum downtime to users.

What should you do first?

- A. Create a new Linked Resource.
- B. Configure Remote Debugging on `contoso`.
- C. Create a new website named `contosoStaging`.
- D. Create a deployment slot named `contosoStaging`.
- E. Back up the `contoso` website to a deployment slot.

Correct Answer: D

The deployment slots feature for Azure Websites allows validating a version of your site with full content and configuration updates on the target platform before directing customer traffic to this version. The expectation is that a deployment slot would be fully configured in the desired target format before performing a swap. <http://stackoverflow.com/questions/24186809/connection-strings-are-replaced-when-performing-azure-web-site-staging-swap>
