QUESTION 1

You are designing an automated process.

The process must automatically copy Twitter messages to an Azure SQL Database.

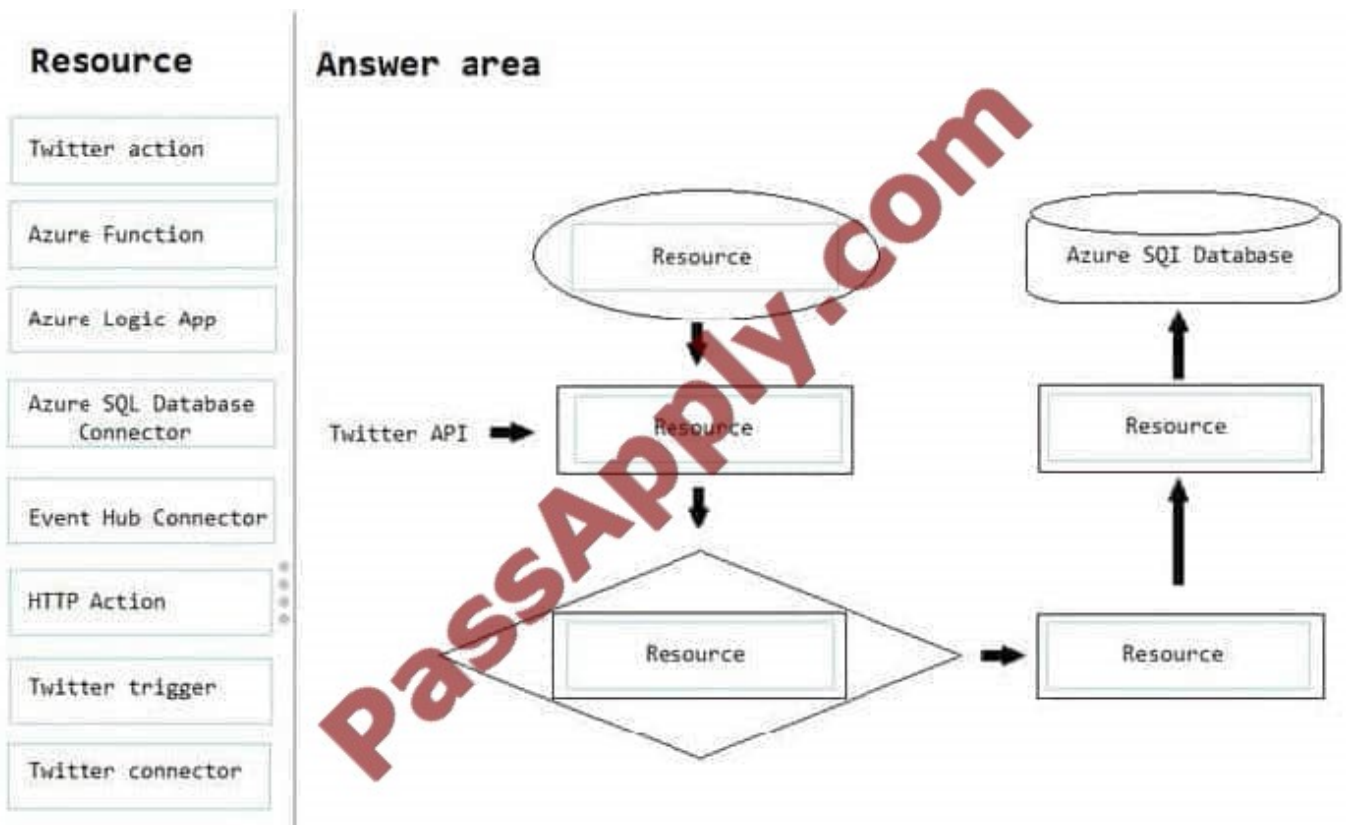

You need to design the solution.

What should you recommend? To answer, drag the appropriate resources to the correct flowchart shapes. Each resource may be used once, more than once, or not at all.

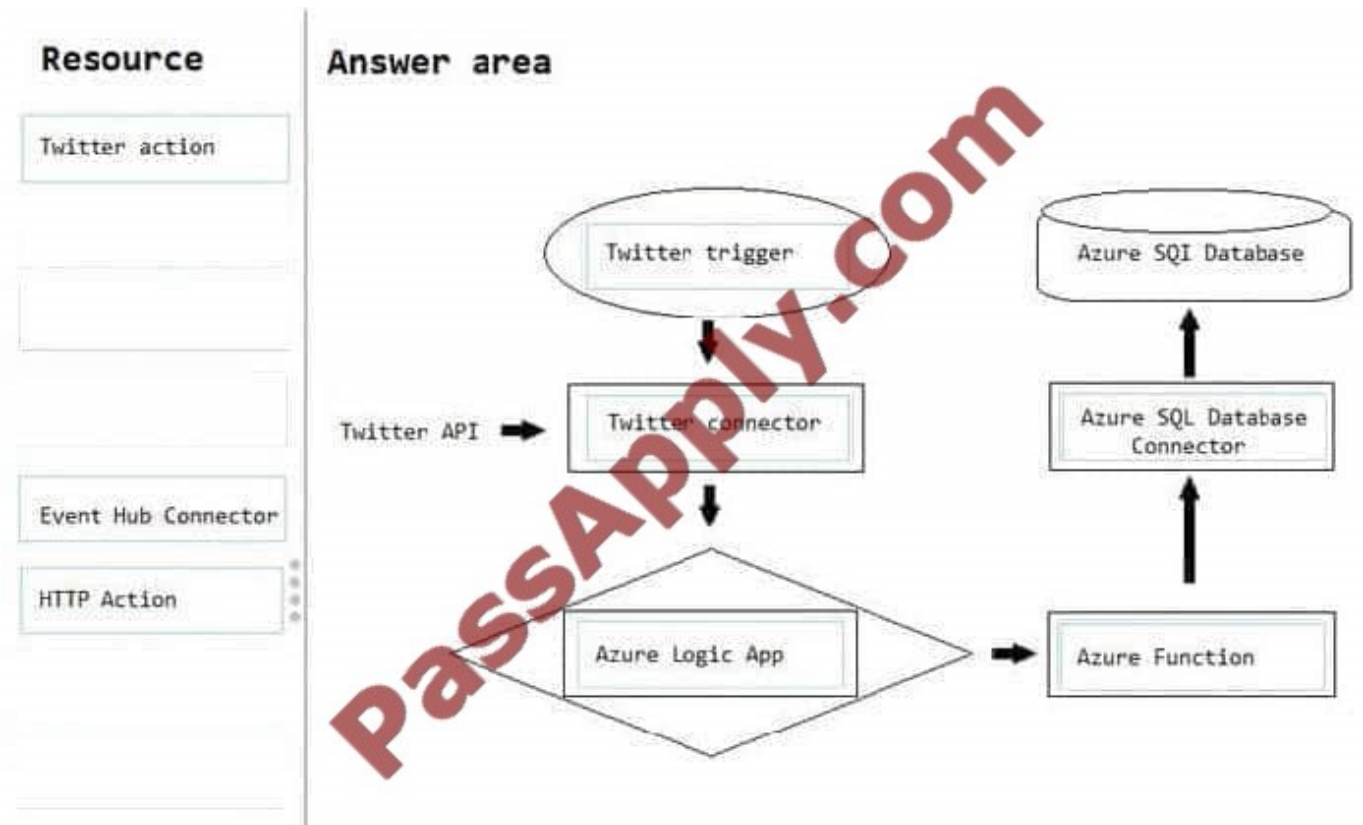

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Correct Answer:

QUESTION 2

You create an Ubuntu Linux virtual machine (VM) by using the Azure Portal. You do not specify a password when you create the VM.

You need to connect to the terminal of the VM.

Solution: You connect to the private IP address of the VM by using Secure Shell (SSH) and specify your public key.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 3

A company has a hybrid ASP.NET Web API application that is based on a software as a service (SaaS) offering.

Users report general issues with the data. You advise the company to implement live monitoring and use ad hoc queries on stored JSON data. You also advise the company to set up smart alerting to detect anomalies in the data.

You need to recommend a solution to set up smart alerting.

What should you recommend?

- A. Azure Security Center and Azure Data Lake Store
- B. Azure Data Lake Analytics and Microsoft Operations Management Suite.
- C. Azure Application Insights and Azure Log Analytics
- D. Azure Site Recovery and Microsoft Operations Management Suite

Correct Answer: C

QUESTION 4

You need to generate the report for the WGBLeaseLeader app. Which Azure service should you use?

- A. Azure Scheduler
- B. Azure Data Lake Store
- C. Azure Storage Queue
- D. Azure Stream Analytics

Correct Answer: A

QUESTION 5

Your company has deployed several virtual machines (VMs) on-premises and to Azure. Azure ExpressRoute has been deployed and configured Azure connectivity.

Several VMs are exhibiting network connectivity issues.

You need to analyze the network traffic to determine whether packets are being allowed or denied to the VMs.

Solution: Install and configure the Operations Management Suite (OMS) and Dependency Agents on all VMs. Use the Wire Data solution in Azure Log Analytics to analyze the network traffic.

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: A

Wire Data looks at network data at the application level, not down at the TCP transport layer. The solution doesn't look at individual ACKs and SYNs. Once the handshake is completed, it is considered a live connection and marked as Connected. That connection stays live as long as both sides agree the socket is open and data can pass back and forth. Once either sides closes the connection, it is marked as Disconnected. Therefore, it only counts the bandwidth of successfully completed packets, it doesn't report on resends or failed packets.
