QUESTION 1

You place an order on the E-Commerce Web Application from a mobile device.

You need to verify the payment and complete the order process.

Which three actions should you perform in sequence?

Select and Place:

Actions

Answer area

- You install the OAuth token
- Azure Active Directory (Azure AD) receives an OAuth token
- The PIN is verified
- The token is verified
- The mobile device receives an OAuth token
- The mobile device receives a text message
- You enter the PIN provided

Answer area boxes for selecting actions in sequence.

Correct Answer:

Actions

Answer area

You install the OAuth token

The mobile device receives a text message

Azure Active Directory (Azure AD) receives an OAuth token

You enter the PIN provided

The PIN is verified

The mobile device receives an OAuth token

The token is verified

Scenario: Users must verify payments on a mobile device by using a two-step verification method to include Short Message Service (SMS).

QUESTION 2

You have several virtual machines (VMs) that run in Azure. You also have a single System Center 2012 R2 Configuration Manager (SCCM) primary site on-premises. You have the following requirements:

*

All VMs must run on the same virtual network.

*

Network traffic must be minimized between the on-premises datacenter and Azure.

*

The solution minimize complexity.

You need to use SCCM to collect inventory and deploy software to Azure VMs.

What should you do first?

A.

Configure client push for the Azure virtual network.

B.

Enable and configure Operations Insights in Azure.

C.

Install a cloud distribution point on an Azure VM.

D.

Install a secondary site underneath the primary site onto an Azure VM.

Correct Answer: C

Cloud-based distribution Point, a Configuration Manager Site System Role in the Cloud Much of the Configuration Manager topology is made up of distribution points, they are very helpful in many situations where bandwidth and geographical separation are the facts of life, but also hard to manage if you have hundreds or even thousands of them.

This feature started with the vision that it makes perfect sense to have big distribution points in the Windows Azure cloud where one should not worry about things like (but not limited to) size, performance, reliability, security, access from all around the world, hardware/software update issues etc.

Note: Content management in System Center 2012 Configuration Manager provides the tools for you to manage content files for applications, packages, software updates, and operating system deployment. Configuration Manager uses distribution points to store files that are required for software to run on client computers. These distribution points function as distribution centers for the content files and let users download and run the software. Clients must have access to at least one distribution point from which they can download the files.

QUESTION 3

Your company runs several Windows and Linux virtual machines (VMs). You must design a solution that implements data privacy, compliance and data sovereignty for all storage uses in Azure. You plan to secure all Azure storage accounts by using Role-Bases Access Controls (RBAC) and Azure Active Directory (Azure AD)

You need to secure the data used by the VMs.

Which solution should you use?

Hot Area:

Boot and data volume

- Azure Storage Service Encryption
- Azure Disk Encryption
- Azure information Protection
- Azure AD

Data written to Azure Storage

- Azure Storage Service Encryption
- Azure Disk Encryption
- Shared Access Signatures(SAS)
- Network Security Group(NSG)

Encryption keys and secrets

- Azure Storage Service Encryption
- Azure Disk Encryption
- Azure key Vault
- Azure Security Center

Correct Answer:

Boot and data volume

- Azure Storage Service Encryption
- Azure Disk Encryption**
- Azure information Protection
- Azure AD

Data written to Azure Storage

- Azure Storage Service Encryption
- Azure Disk Encryption
- Shared Access Signatures(SAS)**
- Network Security Group(NSG)

Encryption keys and secrets

- Azure Storage Service Encryption
- Azure Disk Encryption
- Azure key Vault**
- Azure Security Center

Azure Disk Encryption shared access signatures Azure Key Vault <https://docs.microsoft.com/en-us/azure/security/security-storage-overview>

QUESTION 4

You deploy an Azure Web App. The Web App uses a storage account that contains a large number of storage objects.

You need to grant clients access to application data for a specified interval of time while minimizing effort.

What should you create?

- A. a service shared access signature
- B. an account shared access signature
- C. a network security group
- D. a stored access policy

Correct Answer: B

QUESTION 5

You need to recommend a test strategy for the disaster recovery system.

What should you do? To answer, drag the appropriate test strategy to the correct business application. Each test strategy may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Test Strategies

- On-premises to on-premises deployment
- Use Azure's on-premises to Azure deployment
- Use Azure's built-in cloud redundancy

Answer Area

Business Application	Test Strategy
Distribution Tracking	Test Strategy
Human Services	Test Strategy
Metrics System	Test Strategy

Correct Answer:

Test Strategies

-
-
-

Answer Area

Business Application	Test Strategy
Distribution Tracking	Use Azure's on-premises to Azure deployment
Human Services	On-premises to on-premises deployment
Metrics System	Use Azure's built-in cloud redundancy

*

Distribution tracking

The company wants to ensure that the distribution tracking data is stored at a location that is geographically close to the customers who will be using the information.

*

/ HRApp

The data must remain on-premises and cannot be stored in the cloud.

*

/ Metrics application

Data is stored on an on-premises SQL Server database, but this data should be moved to the cloud.
