QUESTION 1

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription.

The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

The network contains the computers configured as shown in the following table.

| Computer name | Operating system | Configuration |
|---------------|-----------------------------------|---|
| Server1 | Windows Server 2016 Datacenter | Hyper-V host that hosts two test virtual machines |
| Server2 | Windows Server 2016 Datacenter | Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1 |
| Server3 | Windows Server 2016 Datacenter | Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1 |
| Server4 | Windows Server 2016 Datacenter | Member of Cluster1 |
| Server5 | Windows Server 2016 Datacenter | File server |
| Client1 | Windows 10 Enterprise | Privileged access workstation |

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

<https://portal.fabrikam.com>

<https://adminportal.fabrikam.com> <https://management.fabrikam.com> Privileged endpoint: 192.168.100.100 Hardware lifecycle host: 192.168.101.101 <https://adminmanagement.fabrikam.com>

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

SQL Server

App Service

End of repeated scenario.

You plan to configure user1@fabrikam.com as a delegated provider to offer services to tenants.

You need to identify which service must be included in the Azure Stack plan that you offer to User1.

Which service should you identify?

- A. Microsoft.Compute
- B. Microsoft.KeyVault
- C. Microsoft.Storage
- D. Microsoft.Subscriptions

Correct Answer: D

QUESTION 2

HOTSPOT

You are preparing a Linux image for upload to Azure Stack.

You need to install the Microsoft Azure Linux Agent manually.

You install the python-setuptools.

Which command should you run next? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

sudo

| |
|---------|
| apt-get |
| python3 |
| yum |

 setup.py

| |
|-------------------|
| install |
| python-setuptools |
| update |

 --register-service

Correct Answer:

Answer Area

sudo

| |
|---------|
| apt-get |
| python3 |
| yum |

 setup.py

| |
|-------------------|
| install |
| python-setuptools |
| update |

 --register-service

QUESTION 3

DRAG DROP

An Azure Stack Development Kit deployment is used by a developer at your company.

After the developer makes several modifications, the deployment becomes unresponsive.

You need to redeploy the development kit to the same physical host.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Run the `InstallAzureStackPOC.ps1` script and specify the `-Rerun` parameter.

Replace the `CloudBuilder.vhdx` file.

Start the computer from `CloudBuilder.vhdx`.

Run the `asdk-installer.ps1` script.

Run the `Add-AzsRegistration` cmdlet.

Start the host from the base operating system.

Answer Area

Correct Answer:

Actions

Run the `InstallAzureStackPOC.ps1` script and specify the `-Rerun` parameter.

Run the `Add-AzsRegistration` cmdlet.

Answer Area

Run the `asdk-installer.ps1` script.

Start the host from the base operating system.

Replace the `CloudBuilder.vhdx` file.

Start the computer from `CloudBuilder.vhdx`.

QUESTION 4

You have an Azure Stack integrated system that uses Microsoft Azure Active Directory (Azure AD) for authentication. The system uses an external domain named `cloud.contoso.com`.

You plan to provide tenant users with the ability to provision App Services and to use Kudu to develop the App Services.

You need to create the Azure AD application for the planned deployment.

What should you do?

- A. Run the `Add-AzsRegistration` cmdlet. From <https://portal.cloud.contoso.com>, create an App Service offer.
- B. Run the `Create-AADIdentityApp.ps1` script. From <https://portal.azure.com>, modify the permissions of the Azure AD application.
- C. Run the `Add-AzsRegistration` cmdlet. From <https://portal.azure.com>, create a new App Service Environment.

D. Run the Create-AADIdentityApp.ps1 script. From <https://portal.cloud.contoso.com>, create an App Service offer.

Correct Answer: D

QUESTION 5

NOTE: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack integrated system that runs in a connected environment.

You need to recommend an interval for installing Microsoft software update packages to Azure Stack. The solution must ensure that you can receive Microsoft support.

Solution: You recommend that Microsoft software updates be installed every 12 months.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

For your Azure Stack deployment to remain in support, it must run the most recently released update version or run either of the two preceding update versions.

Microsoft will release update packages for Azure Stack integrated systems on a regular cadence that will typically fall on the fourth Tuesday of every month.

Thus to remain in support you must be running one of the last three update versions and, as an update version is released every month, you need to install updates at least every three months.
