QUESTION 1

HOTSPOT

You are preparing a Linux image for upload to Azure Stack.

You need to install the Microsoft Azure Linux Agent manually.

You install the python-setuptools.

Which command should you run next? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

```
sudo 

|         |
|---------|
| apt-get |
| python3 |
| yum     |

 setup.py 

|                   |
|-------------------|
| install           |
| python-setuptools |
| update            |

 --register-service
```

Correct Answer:

Answer Area

```
sudo 

|         |
|---------|
| apt-get |
| python3 |
| yum     |

 setup.py 

|                   |
|-------------------|
| install           |
| python-setuptools |
| update            |

 --register-service
```

QUESTION 2

You manage an Azure Stack integrated system.

You need to identify the IP address of the external time server that was configured during Azure Stack provisioning.

What should you do?

- A. From the Azure Resource Manager endpoint, run Get-AzsUsageConnection.
- B. From the privileged endpoint, run Get-AzureStacklog.

- C. From the Azure Resource Manager endpoint, run Get-AzsResourceProviderManifest.
- D. From the privileged endpoint, run Get-AzureStackStampInformation.

Correct Answer: D

QUESTION 3

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription.

The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

The network contains the computers configured as shown in the following table.

Computer name	Operating system	Configuration
Server1	Windows Server 2016 Datacenter	Hyper-V host that hosts two test virtual machines
Server2	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1
Server3	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1
Server4	Windows Server 2016 Datacenter	Member of Cluster1
Server5	Windows Server 2016 Datacenter	File server
Client1	Windows 10 Enterprise	Privileged access workstation

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

<https://portal.fabrikam.com>

<https://adminportal.fabrikam.com> <https://management.fabrikam.com> Privileged endpoint: 192.168.100.100 Hardware lifecycle host: 192.168.101.101 <https://adminmanagement.fabrikam.com>

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

SQL Server

App Service

End of repeated scenario.

You need to install the Azure Stack Development Kit on Server1.

You download and extract all the required development kit components to Server1.

What should you do first?

- A. Install the Azure PowerShell module.
- B. Modify the BIOS on Server1.
- C. Run the Asdk-Installer.ps1 script
- D. Run the RegisterWithAzure.ps1 script.

Correct Answer: C

QUESTION 4

HOTSPOT

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the

scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription. The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

Computer name	Operating system	Configuration
Server1	Windows Server 2016 Datacenter	Hyper-V host that hosts two test virtual machines
Server2	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1
Server3	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1
Server4	Windows Server 2016 Datacenter	Member of Cluster1
Server5	Windows Server 2016 Datacenter	File server
Client1	Windows 10 Enterprise	Privileged access workstation

The network contains the computers configured as shown in the following table.

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

1.

<https://portal.fabrikam.com>

2.

<https://adminportal.fabrikam.com>

3.

<https://management.fabrikam.com>

4.

Privileged endpoint: 192.168.100.100

5.

Hardware lifecycle host: 192.168.101.101

6.

<https://adminmanagement.fabrikam.com>

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

1.
SQL Server
2.
App Service

End of repeated scenario.

You need to configure the App Service resource provider to offer the Small worker tier to tenants.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 5

NOTE: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have several Azure Stack integrated systems.

A new Azure Stack operator joins your team.

You create a new user named AzStackOp1 that the new operator will use to manage the systems.

AzStackOp1 attempts to create a new plan and receives the following error message: "Failed to submit deployment. Error submitting the deployment request. Additional details from the underlying API that might be helpful: The client

`AzStackOp1@onmicrosoft.com\` with object id `03f4f6a8-0bb5 does not have authorization to perform action..."

You need to ensure that AzStackOp1 can create plans and offers. The solution must prevent AzStackOp1 from delegating RBAC rights to other users.

Solution: You assign AzStackOp1 Owner rights to the Default Provider Subscription.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B
