QUESTION 1

You have an Azure Stack integrated system that uses the external domain name of west.fabrikam.com.

You plan to create an Azure Marketplace package.

Which API endpoint must you use to publish the package?

- A. management.west.fabrikam.com
- B. <https://graph.windows.net/>
- C. <https://graph.west.fabrikam.com/>
- D. mydomain.onmicrosoft.com

Correct Answer: A

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-marketplace-publisher>

QUESTION 2

You deploy an Azure Stack integrated system. The system contains several tenants that use infrastructure as a service (IaaS) virtual machines.

You need to recommend a solution to ensure that if a datacenter fails, you can start the virtual machines as quickly as possible.

What should you include in the recommendation?

- A. blob snapshots
- B. Microsoft Azure Site Recovery
- C. Microsoft Azure Backup
- D. file-snapshot backups

Correct Answer: B

References: <https://docs.microsoft.com/en-us/azure/site-recovery/>

QUESTION 3

HOTSPOT

You have an Azure Stack integrated system.

You need to install the Azure Stack-compatible Azure PowerShell modules on a management workstation.

You set the \$profile variable to the correct API version.

Which commands should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Install-Module -Name

AzureRm.BootStrapper
AzureRmProfile
AzureStack

 -Force

Get-AzureRmProfile
Select-AzureRmProfile
Use-AzureRmProfile

 -Profile profile\$ -Force

Correct Answer:

Answer Area

Install-Module -Name

AzureRm.BootStrapper
AzureRmProfile
AzureStack

 -Force

Get-AzureRmProfile
Select-AzureRmProfile
Use-AzureRmProfile

 -Profile profile\$ -Force

QUESTION 4

You have an Azure stack integrated system.

You already have several Microsoft Azure Marketplace images downloaded.

Several tenants request that a Microsoft SQL Server 2014 Service Pack 2 (SP2) Enterprise on Windows Server 2012 R2 image be available in the Azure Stack Marketplace.

You need to meet the request by using the least amount of administrative effort.

What should you do?

- A. From Azure Marketplace, deploy a SQL Server 2014 SP2 Enterprise on Windows Server 2012 R2 image, copy the VHD file to Azure Stack, and then publish the image to the Azure Stack Marketplace.
- B. Create a new virtual machine that runs Windows Server 2012 R2, install SQL Server 2014 SP2 Enterprise, and then publish the image to the Azure Stack Marketplace.
- C. From Marketplace Management, click Add from Azure, and then download the SQL Server 2014 SP2 Enterprise on Windows Server 2012 R2 image.
- D. Create a new virtual machine image based on an existing SQL Server 2014 SP2 Enterprise virtual machine, upload the image to the Azure Stack Marketplace, and then publish the image for all users.

Correct Answer: C

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-download-azure-marketplace-item>

QUESTION 5

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a main office in New York and a branch office in Toronto. Each office has a dedicated connection to the Internet. Each office has a firewall that uses inbound and outbound rules.

The company has an on-premises network that contains several datacenters. The datacenters contain multiple hypervisor deployments, including Windows Server 2016 Hyper-V. The network uses Microsoft System Center for monitoring and

Windows Azure Pack for self-service.

The company has a Microsoft Azure subscription that contains several workloads. You use Azure Resource Manager templates and other automated processes to create and manage the resources in Azure.

You have an Azure Stack integrated system in the New York office. The company has a development team in the Toronto office and a development team in the New York office. The system has an offer named Offer1. Several tenants have

subscriptions based on Offer1.

You have a Hyper-V host named Server1 that runs Windows Server 2012 R2. Server1 is used for testing. The hardware on Server1 can support the deployment of the Azure Stack Development Kit.

You have a Generation 1 virtual machine named VM1 that runs Windows Server 2012 R2. VM1 is deployed to a Hyper-V host that runs Windows Server 2016. VM1 has a fixed size disk named VM1.vhdx that is 200 GB.

End of repeated scenario.

You need to ensure that you can import VM1 to Azure Stack.

What should you do?

- A. Recreate VM1 as a Generation 2 virtual machine.
- B. Convert the disk to a VHD.
- C. Convert the disk to a dynamically expanding disk.
- D. Upgrade VM1 to Windows Server 2016.

Correct Answer: B

Azure supports only generation 1 VMs that are in the VHD file format and have a fixed sized disk. The maximum size allowed for the VHD is 1,023 GB. You can convert a generation 1 VM from the VHDX file system to VHD and from a dynamically expanding disk to fixed-sized. But you can't change a VM's generation.

Incorrect Answers:

A: Azure supports only generation 1 VMs that are in the VHD file format.

C: Azure Stack does not support dynamic VHDs. Resizing a virtual machine (VM) with a dynamic disk attached to it leaves the VM in a failed state.
