QUESTION 1

You are creating an undo buffer that stores data modifications. You need to ensure that the undo functionality undoes the most recent data modifications first. You also need to ensure that the undo buffer permits the storage of strings only. Which code segment should you use?

- A. `Stack undoBuffer = new Stack();`
- B. `Stack undoBuffer = new Stack();`
- C. `Queue undoBuffer = new Queue();`
- D. `Queue undoBuffer = new Queue();`

Correct Answer: A

QUESTION 2

You are using the Microsoft Visual Studio 2005 IDE to examine the output of a method that returns a string. You assign the output of the method to a string variable named `fName`. You need to write a code segment that prints the following on

a single line The message: "Test Failed: "

The value of `fName` if the value of `fName` does not equal "John" You also need to ensure that the code segment simultaneously facilitates uninterrupted execution of the application. Which code segment should you use?

- A. `Debug.Assert(fName == "John", "Test Failed: ", fName);`
- B. `Debug.WriteLineIf(fName != "John", fName, "Test Failed");`
- C. `if (fName != "John") { Debug.Print("Test Failed: "); Debug.Print(fName); }`
- D. `if (fName != "John") { Debug.WriteLine("Test Failed: "); Debug.WriteLine(fName); }`

Correct Answer: B

QUESTION 3

You create Web-based applications. The application is installed in a Network Load Balancing cluster. You are analyzing a bug report. When a failure occurs in the application, the client sometimes receives a correctly formatted friendly error page as expected. At other times, the client receives an exception stack with the error message, which is not expected. You need to identify the configuration setting that causes the unexpected response. Which configuration setting should you identify?

- A.

- B.
- C.
- D.

Correct Answer: D

QUESTION 4

You create Web-based client applications. You are creating an ASP.NET intranet site. The site permits individual departments to post content without involving the Central Information Technology resources. The site also permits Central Information Technology to maintain control over the intranet as a whole. Each department wants complete control over the appearance and behavior of their departmental content. However, Information Technology directives require every page on the intranet to maintain a consistent appearance and behavior. You need to develop the Web page on the intranet site so that it meets the requirements. What should you do?

- A. Create a single ASP.NET master page and individual department master pages. The pages must refer to the master page. Permit each department to modify its master page as desired as long as it references the company master page.
- B. Create a set of common .aspx files that contain the common style sheets and the header, navigation bar, and footer content that are to be referenced from departmental home pages by using ASP.NET `#include` directives.
- C. Create a base class that inherits from `System.Web.UI.Page` and design this page to control the common user interface elements.
- D. Create the home pages for all departments as ASP.NET server controls. Reference each control from the main project and load the appropriate server control when a departments home page is loaded.

Correct Answer: A

QUESTION 5

You create a master page named `Article.master`. `Article.master` serves as the template for articles on your Web site. The master page uses the following page directives. You need to create a content page that uses the master page as a template. In addition, you need to use a single master page for all devices that access the Web site. Which code segment should you use?

- A.
- B.
- C.
- D.

Correct Answer: B
