QUESTION 1

You have a SharePoint site that contains 10 lists.

You need to prevent a list named List1 from appearing on the Quick Launch navigation bar. What should you configure?

- A. the QuickLaunchEnabled property of the site
- B. the Hidden property of List1
- C. the OnQuickLaunch property of List1
- D. the Navigation.QuickLaunch.Parent.IsVisible property of the site

Correct Answer: C

MNEMONIC RULE: "Do you want to see the list on Quick Launch?" Gets or sets a Boolean value that specifies whether the list appears on the Quick Launch area of the homepage. SPList.OnQuickLaunch Property
<http://msdn.microsoft.com/en-us/library/microsoft.sharepoint.splist.onquicklaunch.aspx>

QUESTION 2

You have a Web application named WebApp1.

You have a Feature receiver named FeatureReceiver1. FeatureReceiver1 stores a connection string in the web.config file of WebApp1.

You need to ensure that when FeatureReceiver1 makes configuration changes to web.config, the changes are automatically replicated to all Web servers in the farm.

Which class should you use in FeatureReceiver1?

- A. SPPersistedObject
- B. SPWebConfigModification
- C. SPDiagnosticsService
- D. WebConfigurationManager

Correct Answer: C

MNEMONIC RULE: "web.config modification = SPWebConfigModification" To apply modifications that you define through the SPWebConfigModification class to the web.config files in the server farm, call the ApplyWebConfigModifications method on the current content Web service object, as follows:
SPWebService.ContentService.ApplyWebConfigModifications SPWebConfigModification Class
<http://msdn.microsoft.com/enus/library/microsoft.sharepoint.administration.spwebconfigmodification.aspx>

QUESTION 3

You need to create a Web Part that displays all of the content created by a specific user.

You write the following code segment. (Line numbers are included for reference only.)

```
01 FullTextSqlQuery qry = new FullTextSqlQuery(ServerContext.GetContext(SPContext.  
Current.Site));
```

```
02 qry.ResultTypes = ResultType.RelevantResults; 04 qry.QueryText = strQuery; 05 ResultTableCollection results =  
qry.Execute();
```

Which code segment should you add at line 03?

- A. string strQuery = "author:" + searchAuthor;
- B. string strQuery = "docID:" + searchAuthor;
- C. string strQuery = "SELECT Title,Author,Path FROM SCOPE() WHERE author = \"\" + searchAuthor + \"\"";
- D. string strQuery = "SELECT Title,Creator,Path FROM SCOPE() WHERE docID = \"\" + searchAuthor + \"\"";

Correct Answer: C

MNEMONIC RULE: "SQL to search for author"

FullTextSqlQuery: Use this class to execute SQL syntax search queries. Windows SharePoint Services Search Query Object Model <http://msdn.microsoft.com/en-us/library/ms455094.aspx>

QUESTION 4

You create a Web Part. The Web Part contains a grid view named GridView1 and the following code segment. (Line numbers are included for reference only.)

```
01 Dim dc As New IntranetDataContext("http://intranet")
```

```
02 MyGridView.DataSource = From announce In dc.Announcements _ 04 Select announce IntranetDataContext is a  
LINQ context.
```

You need to ensure that GridView1 only displays items from Announcements that have an expiry date that is greater than or equal to the current date. What should you do?

- A. Change line 04 to the following code segment. Select Not announce.Expires.HasValue
- B. Change line 04 to the following code segment. Select announce.Expires.Value.CompareTo(DateTime.Now) >= 0
- C. Add the following line of code at line 03. Where announce.Expires.Value.CompareTo(DateTime.Now) >= 0 _
- D. Add the following line of code at line 03. Order By announce.Expires.Value.CompareTo(DateTime.Now) >= 0 _

Correct Answer: C

QUESTION 5

You create a Feature named Feature1. Feature1 is activated in a SharePoint site. You create a Web Part that contains the following code.

```
Dim site As New SPSite("http://intranet/site1")
```

```
Dim web As SPWeb = site.OpenWeb()
```

```
Dim feature As SPFeatureDefinition = SPFarm.Local.FeatureDefinitions("Feature1")
```

You need to modify the Web Part to activate Feature1 in Site1 only. Which code segment should you add to the Web Part?

- A. `site.Features.Add(feature.Id)`
- B. `site.WebApplication.WebService.Features.Add(feature.Id)`
- C. `web.Features.Add(feature.Id)`
- D. `web.Site.WebApplication.WebService.Features.Add(feature.Id)`

Correct Answer: C

MNEMONIC RULE: "add feature to http://intranet/site1" This question is confusing. site object is a SharePoint site collection with http://intranet/site1 being the root site (or root web) of this collection. The statement "activate Feature1 in Site1

only" makes it unclear how to treat "Site1" -- as a site collection or as a root web.

However, the second sentence of this question states: "Feature 1 is activated in SharePoint site". Well, SPWeb class represents SharePoint website. That's why I picked Answer C, and you are free to disagree with me. It is possible that

Answer A is the correct one for this question.
