QUESTION 1

You are planning security for a SharePoint 2010 intranet site. A subsite for the human resources (HR) department contains a list of salary information. All the HR department employees are in an Active Directory (AD) group named SharePoint

HR. The SharePoint HR AD group has been granted Read access to the subsite. You have the following requirements:

- .Access to the list should be handled only through the HR department group.
- .The group membership of the AD HR group should be used to specify the site permissions.
- .The department's administrative assistant should not have access to view the salary list.

You need to ensure that permissions are configured on the subsite to meet these requirements.

Which plan should you recommend?

- A. Remove the assistant from the SharePoint HR AD group. Give the assistant individual Read access to the site. Modify the salary list permissions, removing the assistant from the list.
- B. Modify the salary list permissions, explicitly denying the assistant Read access to the salary list.
- C. Modify the salary list permissions, remove the SharePoint HR group from the list of users and groups who have been granted any sort of access to the list. Grant each employee of the HR department individual Read access to the salary list, with the exception of the assistant.
- D. Modify the salary list permissions, explicitly denying the SharePoint HR group Read access to the salary list. Grant each employee of the HR department individual Read access to the salary list, with the exception of the assistant.

Correct Answer: A

QUESTION 2

Your company has a SharePoint 2010 farm that has one Web application with multiple site collections. Your team needs to meet the following requirements:

- .Certain individuals need to have the "Full Control" permission set on every site collection in the Web application.
- .Permissions must be set in a central location and should effect all current and future site collections.

Which approach should you recommend?

- A. Add users to the local administrators group on the server.
- B. Add users to the Site Owners group in each site collection.
- C. Create a user policy for the Web application in Central Administration.
- D. Create a group policy in the Active Directory domain to which the SharePoint users authenticate.

Correct Answer: C

QUESTION 3

You are designing a SharePoint 2010 application and a Web application. You need to design a security model for the application that requires users to be authenticated through the Windows Live ID service without using a custom provider. Which type of authentication should you recommend?

- A. claims-based authentication
- B. Kerberos
- C. NTLM
- D. forms-based authentication

Correct Answer: A

QUESTION 4

You are designing an extranet site using SharePoint 2010. This site must allow employees to log on to the extranet site from home. They should use their corporate Active Directory credentials by typing their user name and password into text boxes on a logon page on the site. After users log on, they should be redirected to the site home page. You need to meet these requirements with the least amount of configuration.

Which type of authentication should you design?

- A. forms-based authentication (FBA)
- B. Web Single-Sign On (SSO)
- C. NTLM
- D. Kerberos

Correct Answer: A

QUESTION 5

You need to specify the correct artifacts to use in a SharePoint 2010 application for a school district. The school district's administrator needs to be able to search for student information on an intranet SharePoint 2010 portal. Student

information is currently available in another database, which supports an Open Database Connectivity (ODBC) driver. You need to design the solution to meet the following requirements:

.Provide a user interface to search for a student based on name.

.Enable the administrator to select the correct student name from the search results.

.Provide a student header section that displays the primary student identity information, which will enable the administrator to correlate any new information with the correct student.

.Provide additional data entry pages to add or update additional student information.

Which approach should you recommend?

A. Design HTML Web pages to render the student details. Install these pages under the /templates/_layouts/1033 folder and load these pages in Web Parts.

B. Design connected Web Parts to share information among search data entry, student header information, and new data entry information Web Parts.

C. Design a user control and load this control in a Web Part to search for a student. Then render the student details in a SharePoint page.

D. Design a Web Part to search for a student. Then render the student record details in a SharePoint page.

Correct Answer: B
