-  **800,000+** Satisfied Customers

### QUESTION 1

You are planning a feature upgrade for a SharePoint 2010 farm. The original feature with a version number of 1.0.0.0 is activated in numerous scopes within the farm. You have designed a new version of the feature, 2.0.0.0, which has been deployed and activated in many locations but not all. You need to recommend a way to use the object model to determine if the version number of each feature instance is less than the 2.0.0.0 version in all of the locations.

Which approach should you recommend?

- A. Use the object model to update the Version attribute of the feature in the existing Feature.xml file.
- B. Call the QueryFeatures method for each location hosting the feature in the various scopes.
- C. Programmatically add an section to the Feature.xml file that specifies the new version number for the feature.
- D. Create a feature receiver that calls the Upgrade method of the SPFeatures class for the feature.

Correct Answer: B

---

### QUESTION 2

You are designing an application in a SharePoint 2010 server farm for an international firm. The sites must be localized for the languages in different countries. The application must include support for the following functionality:

.Feature-specific resource files  
.Language-specific Web Part package assemblies and resources  
.Language-specific Web template files  
.Language-specific \_layout files

You need to design a solution that meets all these requirements.

Which approach should you recommend?

- A. Create a language pack for the specific language required and add it to the solution store before adding the corporate solution. Deploy the language pack and then deploy the solution.
- B. Create a language pack for the specific language required and add it to the solution store before adding the corporate solution. Deploy the solution and then deploy the language pack.
- C. Create a language pack for the specific language required and add it to the solution store after adding the corporate solution. Deploy the language pack and then deploy the solution.
- D. Create a language pack for the specific language required and add it to the solution store after adding the corporate solution. Deploy the solution and then deploy the language pack.

Correct Answer: D

---

### QUESTION 3

You are designing a SharePoint 2010 application. You have the following requirements:

- .Display sales data from a CRM system.
- .Authenticate users to the CRM system through their Windows credentials.
- .Eliminate multiple authentication requests.

You need to choose an authentication method that supports the requirements.

Which authentication method should you recommend?

- A. NTLM
- B. Kerberos
- C. forms-based authentication that prompts for the user's Windows credentials
- D. forms-based authentication that uses the ASP.NET SQL Membership provider

Correct Answer: B

---

#### QUESTION 4

You are designing a SharePoint 2010 solution that allows users to enter address information for contacts into a list named Address. You have the following requirements:

- .Ensure that users enter full nine-digit zip codes for the address information.
- .Display a custom message indicating that a zip code is invalid if the entered zip code does not match the full nine-digit requirements.

You need to ensure that the application is designed to meet these requirements.

Which approach should you recommend?

- A. Create a custom command.
- B. Create a Datasheet view on the Address list.
- C. Use the Form Options of the Address list.
- D. Create a formula on the column.

Correct Answer: D

---

#### QUESTION 5

You are designing a SharePoint 2010 feature that will be included in a solution package.

You have added a feature receiver to your feature. You need to ensure that the code in the feature receiver executes when the solution package is deployed to the Web front-end servers.

Which approach should you recommend?

- A. Add your code to the FeatureInstalled method of the feature receiver.
- B. Add your code to the FeatureActivated method of the feature receiver.
- C. Add a FeatureInstalled node referencing the feature receiver assembly to the solution manifest file.
- D. Add a FeatureActivated node referencing the feature receiver assembly to the solution manifest file.

Correct Answer: A
