QUESTION 1

You are planning an upgrade for an existing SharePoint 2010 intranet site to support a Spanish language version of all existing sites. You need to meet the following requirements:

- .All text on the sites must appear in both Spanish and English.
- .Every page on the current English sites must also appear in Spanish.
- .All future pages must be created in both languages in a consistent manner.
- .The upgrade must involve the least amount of human effort and the least expenditure of hardware and software resources.

Which approach should you recommend?

- A. Install a parallel SharePoint farm using Spanish as the default language. Recreate all sites and incorporate the Spanish language version of the site definition by specifying the Spanish language identifier.
- B. Install a language pack for Spanish on the existing SharePoint farm. Recreate all sites and incorporate the Spanish language version of the site definition by specifying the Spanish language identifier.
- C. Install a language pack for Spanish on the existing SharePoint farm. Create SharePoint workflows that apply the Spanish language identifier for the sites by specifying Spanish variations.
- D. Install a language pack for Spanish on the existing SharePoint farm. Apply the Spanish language identifier to the existing site templates.

Correct Answer: B

QUESTION 2

You are designing a SharePoint 2010 application. You need to design the application so that it meets the following requirements:

- .Content authors must be allowed to create product pages.
- .Content authors also must be able to add Web Parts to customize the page.
- .Product pages must allow the content author to select a value from a Product Type field as defined in an existing site column.

Which approach should you recommend?

- A. Create an application page that includes the Product Type field and Web Part zones.
- B. Create a page layout that includes the Product Type field and Web Part zones.
- C. Create a static page that includes the Product Type field and Web Part zones.
- D. Create a Web Part page that includes the Product Type field and Web Part zones.

Correct Answer: B

QUESTION 3

You are asked to analyze a SharePoint 2010 system that is experiencing performance problems, especially under heavy loads. The system contains multiple custom Web applications and third-party Web Parts. The performance problems are

exhibiting the following symptoms:

- .The application pool recycles frequently.
- .The system experiences slow client response times.
- .The system experiences excessive page faults.

You need to identify a possible source of these performance issues and suggest a way to verify your analysis. What should you do?

- A. Propose that the custom code in the third-party application is not disposing of its objects properly, and verify the theory by checking the Unified Logging Service (ULS) logs for entries related to the SPRequest object.
- B. Propose that the paging file size is too large, and verify the theory by using the System Monitor to see if the % Usage counter for the paging file is 50% or less.
- C. Propose that the application pool recycle setting should be changed to recycle less frequently and verify the theory by retesting the system to verify improved performance.
- D. Propose that the application be moved to a server with a faster disk system that supports fault tolerance and retest the system to verify improved performance.

Correct Answer: A

QUESTION 4

You are designing an application that will use a timer job that will run each night to send documents to a SharePoint 2010 Records Center site for archiving. The security on the site requires higher privileges than those normally associated

with the application. The security requirements for this application specify that:

- .It must not require customized storage of the user credentials.
- .The user token used for security access must expire within 24 hours unless specifically refreshed to prevent extended or unintended use over time.
- .The security mechanism must require a two-way trust to prevent unauthorized activity between domains.
- .The application must use the SharePoint object model to accomplish this.

You need to design the application to support these security requirements.

How should you design the timer job?

- A. to inherit the security role assignments
- B. to log on to the Records Center site with a service account stored in a database
- C. to run with elevated privileges
- D. to run with impersonation

Correct Answer: D

QUESTION 5

You are designing a SharePoint 2010 application to manage projects. The application has following requirements:

- .Users must have access to the CreateProject.aspx page.
- .All changes to the CreateProject.aspx page must be reflected on all project sites.

You need to design a page that can be accessed from each project site.

Which approach should you recommend?

- A. Create a master page and deploy it to the _layouts directory.
- B. Create a master page and deploy it to the _masterpages directory.
- C. Create an application page and deploy it to the _layouts directory.
- D. Create an application page and deploy it to the Pages library.

Correct Answer: C
