QUESTION 1

You are creating a Microsoft Windows Installer (MSI) package for a BizTalk Server 2010 application. The application is currently running on Server A. Server B requires a different binding file that is available on the file system of Server A. The MSI package must be suitable for deployment on both Server A and Server B. You need to deploy the application on Server B.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. On Server A, import the binding file for Server B into the application. Create an MSI package.
- B. On Server A, add the binding file for Server B as a resource to the application. Create an MSI package.
- C. Deploy the MSI package on Server B with the default target staging environment.
- D. Deploy the MSI package on Server B and select the correct target staging environment.

Correct Answer: BD

QUESTION 2

A supplier sends messages that they sign with a certificate to a BizTalk Server 2010 application. You need to ensure that the received messages are signed with the certificate. What should you do?

- A. Use the XMLTransmit pipeline.
- B. Use a custom pipeline that leverages the MIME/SMIME encoder component.
- C. Use a custom pipeline that leverages the MIME/SMIME decoder component.
- D. Use the XMLReceive pipeline.

Correct Answer: C

QUESTION 3

A company uses an existing BizTalk Server 2010 solution to process customer orders. A customer sends you positional flat files containing orders. All dates in the customer flat file are provided as string data types in a YYYYMMDD format. The orchestration requires that the dates are treated as date data types in the YYYYMMDD format. You need to ensure that dates provided by the customer are specified as dates in the YYYYMMDD format and not strings.

Which task or tasks should you perform by using the BizTalk Schema Editor?

- A. Change the Base Data Type property to xs:date and set the MinFacet and MaxFacet properties to yyyyMMdd for each field that contains a date.
- B. Create a SimpleType property with a regular expression Pattern equal to yyyyMMdd. Change the Base Data Type

property to the SimpleType property for each field that contains a date.

C. Create a SimpleType property with a regular expression Pattern equal to yyyyMMdd. Change the Data Type property to the SimpleType property for each field that contains a date.

D. Change the Data Type property to xs:date and set the Custom Date/Time Format property to yyyyMMdd for each field that contains a date.

Correct Answer: D

QUESTION 4

An existing BizTalk Server 2010 messaging solution for processing orders has a send port group that contains two send ports. Send Port A is for Supplier A and Send Port B is for Supplier B. Each supplier receives only one copy of each order message. The order schema has a promoted property named OrderAmount that contains the total amount of the order. The send port group subscribes to all messages where a promoted property OrderAmount exists. The send ports do not have a filter defined. Messages with an order amount less than or equal to 1000 must be sent to Supplier A. Messages with an order amount greater than 1000 must be sent to Supplier B. Only a single message can be sent to either Supplier A or Supplier B. You need to modify the solution to route each order message to either Supplier A or Supplier B.

What should you do?

A. Delete the existing filter condition on the send port group. Add a filter condition on the send port group to subscribe for messages where OrderAmount is 1000.

B. Keep the existing filter condition on the send port group. Add a filter condition on the send port group to subscribe for messages where OrderAmount is than 1000.

C. Set a filter on Send Port A to subscribe for messages where OrderAmount is 1000. Stop and start the send port group.

D. Set a filter on Send Port A to subscribe for messages where OrderAmount is 1000. Delete the send port group.

Correct Answer: D

QUESTION 5

A company tracks storage containers and integrates radio frequency identification (RFID) readers with a server shipping management system built on BizTalk Server 2010. You define a custom tag event named ContainerArrivedEvent. You use the RFID manager to add the SqlServerSink component to the RFID process. You need to ensure that the SqlServerSink component logs only the custom tag event.

What should you specify for the EventTypes property?

A. ContainerArrivedEvent

B. the fully qualified assembly name

C. All

D. Generic

Correct Answer: B
