QUESTION 1

Your network contains an Active Directory forest named contoso.com. Contoso.com contains three domain controllers that run Windows Server 2008 R2 and three domain controllers that run Windows Server 2003. All domain controllers are

configured as DNS servers.

You configure the contoso.com zone to use DNSSEC.

You need to ensure that the zone only replicates to DNS servers that support DNSSEC.

What should you do first?

- A. Modify the Notify settings of the contoso.com zone.
- B. Create an application directory partition.
- C. Move the contoso.com zone to the ForestDnsZones application directory partition.
- D. Add a server certificate to the Windows Server 2003 DNS servers.

Correct Answer: B

QUESTION 2

Your company has a main office and a branch office. The company network has two WINS servers. You have an application that requires NetBIOS name resolution. The WINS servers are configured as shown in the following table.

Location	Server name	IP address
Main office	DC1	10.1.0.23
Branch office	DC2	10.6.0.254

You discover that the WINS addresses on all client computers in both offices are configured in the following order of use:

10.1.0.23

10.6.0.254

You reconfigure the WINS addresses on all client computers in the branch office in the following order of use:

10.6.0.254

10.1.0.23

After the reconfiguration, users in the branch office are unable to connect to the servers that are located in the main office.

You need to restore name resolution in the branch office.

What should you do?

- A. Configure the burst handling option on DC2.
- B. Configure DC1 and DC2 as WINS push/pull replication partners.
- C. In the WINS server properties on DC1, increase the Renew interval setting to 1 day.
- D. In the WINS server properties on DC2, increase the Renew interval setting to 1 day.

Correct Answer: B

QUESTION 3

Your network contains an Active Directory domain. The domain contains an enterprise certification authority (CA) named Server1 and a server named Server2.

On Server2, you deploy Network Policy Server (NPS) and you configure a Network Access Protection (NAP) enforcement policy for IPsec.

From the Health Registration Authority snap-in on Server2, you set the lifetime of health certificates to four hours.

You discover that the validity period of the health certificates issued to client computers is one year.

You need to ensure that the health certificates are only valid for four hours.

What should you do?

- A. Modify the Request Handling settings of the certificate template used for the health certificates.
- B. Modify the Issuance Requirements settings of the certificate template used for the health certificates.
- C. On Server1, run `certutil.exe -setreg policy\editflags +editf_attributeenddate`.
- D. On Server1, run `certutil.exe Csetregdbflags +dbflags_enablevolatilerequests`.

Correct Answer: C

Configure template validity period override

Use the following procedure to allow the CA to issue the new health certificate template. This procedure applies to an enterprise NAP CA only.

To allow template validity period override

On the NAP CA, click Start, click Run, right-click Command Prompt, and then click Run as administrator. In the command window, type `Certutil.exe -setreg policy>EditFlags +EDITF_ATTRIBUTEENDDATE`, and then press ENTER.

In the command window, type `net stop certsvc` and `net start certsvc`, and then press ENTER. Verify that Active Directory Certificate Services (AD CS) stops and starts successfully. <http://technet.microsoft.com/en-us/library/dd296906>

QUESTION 4

Your network contains a RADIUS server named Server1 and a VPN server named Server2. You deploy Network Policy and Access Services (NPAS) to a new server named Server3. You need to configure Server3 as a RADIUS proxy. The solution must ensure that Server3 accepts authentication requests from Server2 and forwards the requests to Server1. Which three actions should you perform on Server3? (Each correct answer presents part of the solution. Choose three.)

- A. Configure a connection request policy.
- B. Create a health policy.
- C. Create a remote RADIUS server group.
- D. Add a RADIUS client.
- E. Configure a network policy.

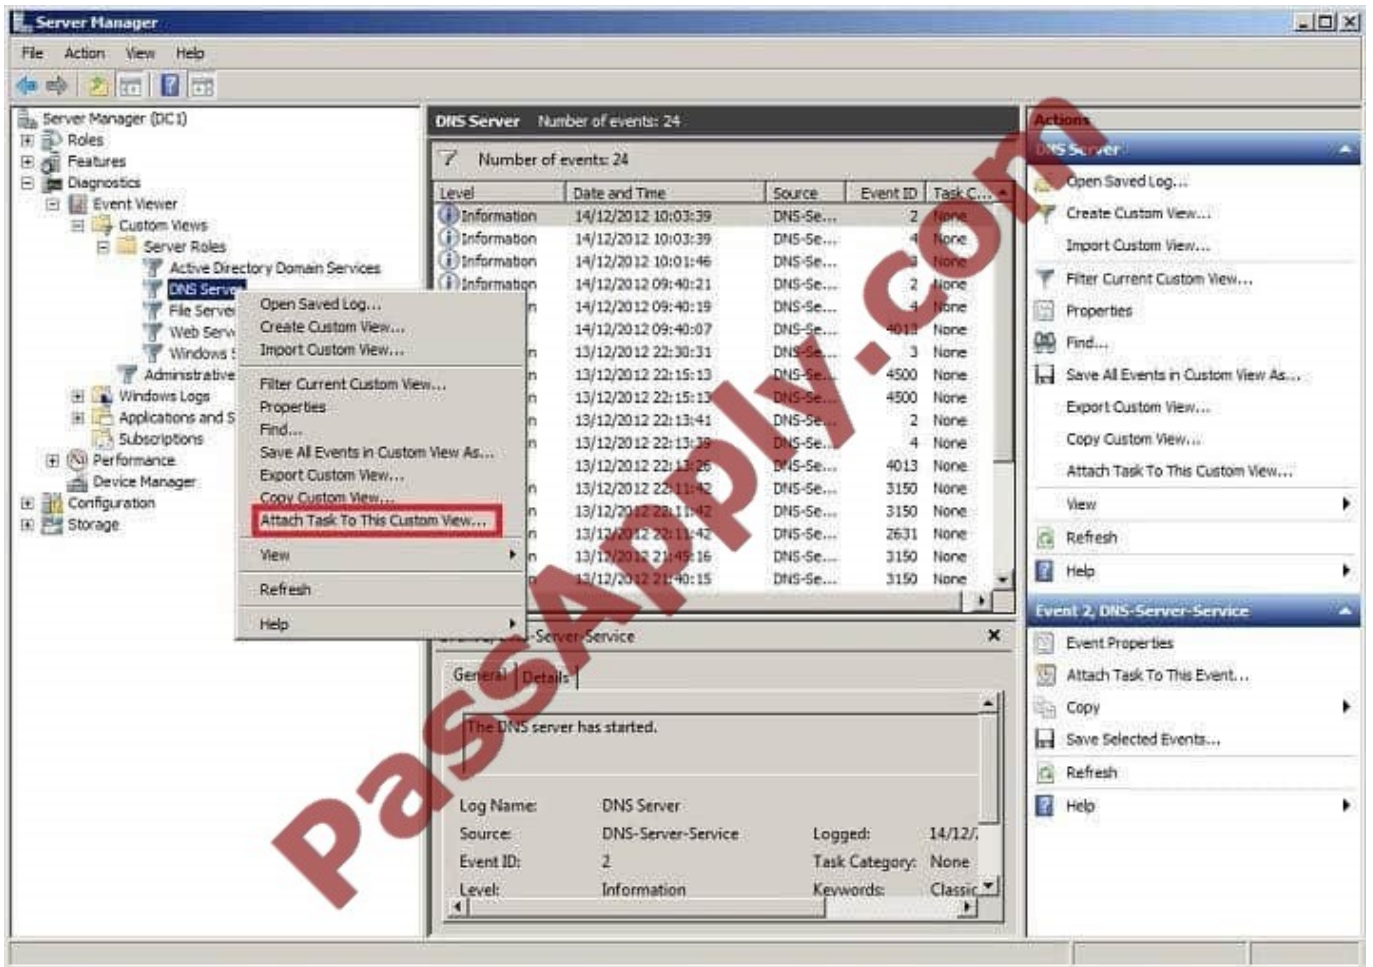

Correct Answer: ACD

QUESTION 5

Your network contains a server named Server1 that runs Windows Server 2008 R2. You need to ensure that an administrator is notified by e-mail if the Event Viewer logs any error. What should you do from the Event Viewer console?

- A. Create a custom view, and then click the Filter Current Custom View action.
- B. Create a custom view, and then click the Attach Task to This Custom View action.
- C. From the System log, click the Filter Current Log action.
- D. From the System log, select an Error event, and then click the Attach Task to This Event action.

Correct Answer: B
