QUESTION 1

You manage a member server that runs Windows Server 2008 R2. The member server has the Web Server (IIS) server role installed. The server hosts a Web site that is only accessible to the executives of your company.

The company policy states that the executives must access the confidential Web content by using user certificates.

You need to ensure that the executives can only access the secure Web site by using their installed certificates.

What should you do?

A. Configure the SSL settings to Require 128-bit SSL on the confidential Web site.

B. Configure the Client Certificates settings to Accept on the SSL settings for the confidential Web site.

C. Configure the Client Certificates settings to Require on the SSL settings for the confidential Web site.

D. Configure a Certificate Trust list to include the executives\\' certification authority (CA) certificate.

Correct Answer: C

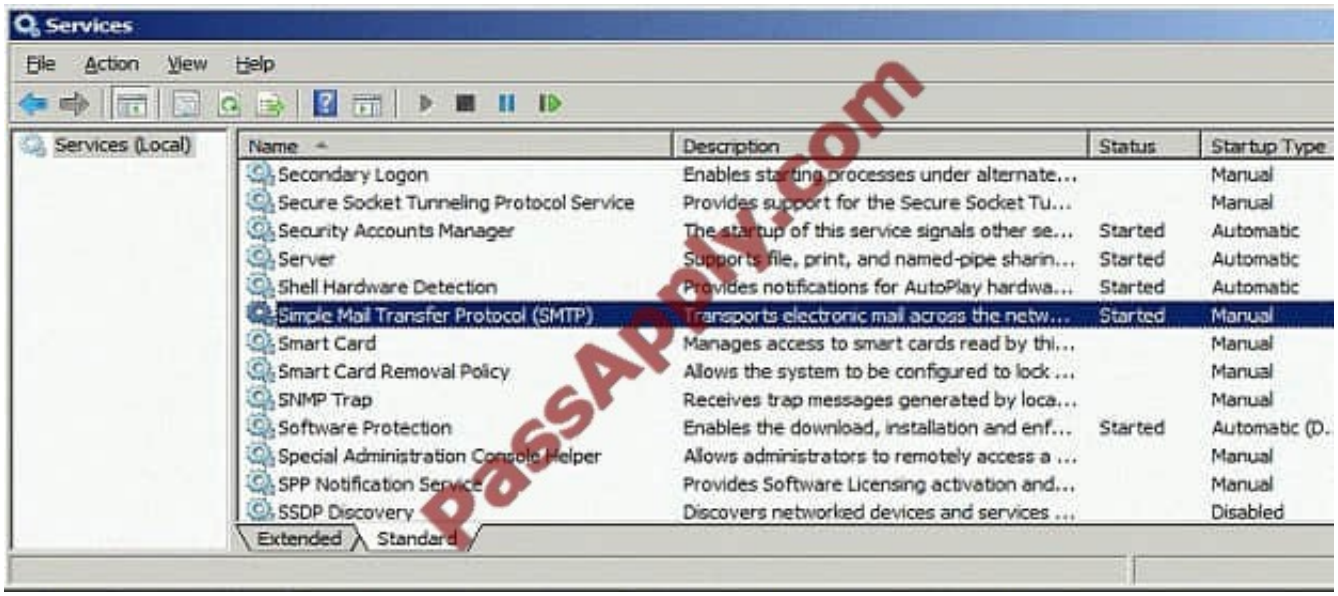
QUESTION 2

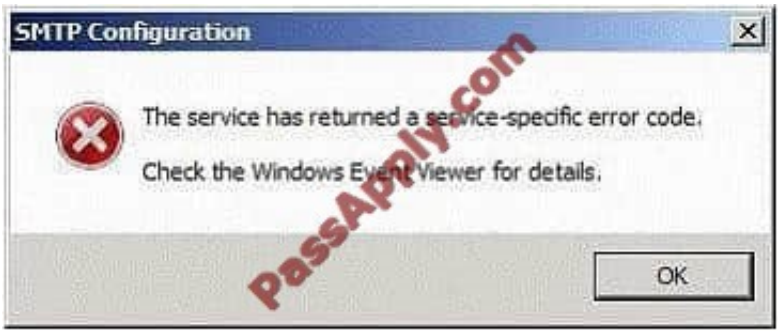
Your network contains an SMTP server.

You discover that the server has two SMTP Virtual Servers named SMTP1 and SMTP2.

SMTP1 starts and SMTP2 stops.

You attempt to start SMTP2 and receive the following error message.





You need to ensure that you can start SMTP2. Which settings should you modify on SMTP2?

A. Access control

B. Advanced Delivery

C. Connection Control

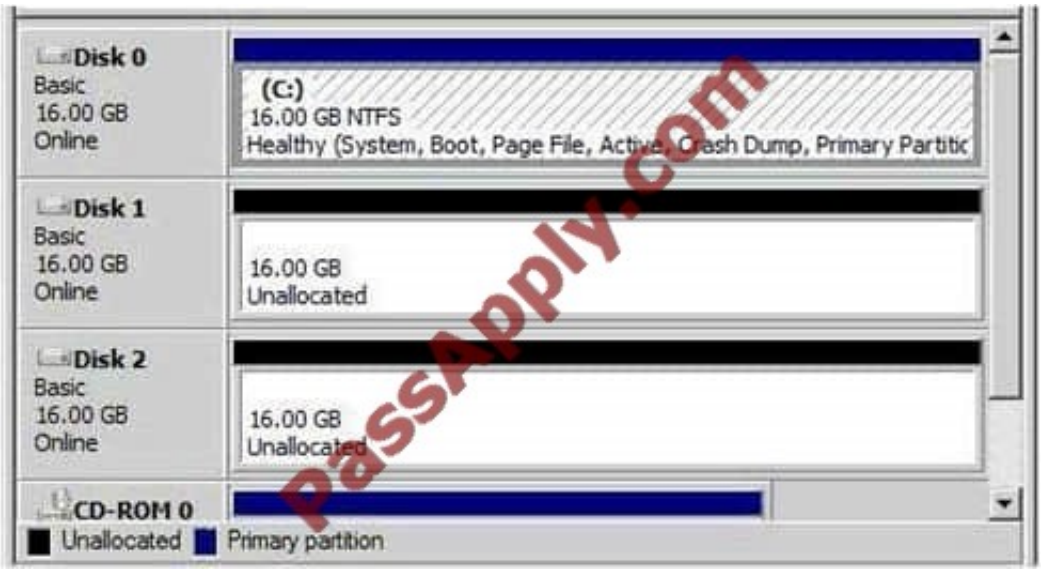
D. IP address and TCP port

Correct Answer: D

IP address/TCP port: All unassigned/25. You can use the General tab in the SMTP virtual server properties dialog box to change this setting. If you change this etting, you must specify an IP address/TCP port combination that is not being used by another SMTP virtual server. TCP port 25 is both the default TCP port and the recommended TCP port. More than one virtual server can use the same TCP port, provided that they are configured with different IP addresses. If you do not set a unique IP address/TCP port combination, the SMTP virtual server will not start. Source: http://technet.microsoft.com/es-es/library/cc758440(WS.10).aspx

QUESTION 3

Your company has a single Active Directory domain. All the servers run Windows Server 2008 R2. You have a server named FS1 that has the File Services server role installed. The disks are configured as shown in the following exhibit.



You need to create a new drive volume to support data striping with parity. What should you do?

A. Add another disk. Create a New RAID-5 Volume.

B. Create a new Striped Volume by using Disk 1 and Disk 2.

C. Create a New Mirrored Volume by using Disk 1 and Disk 2.

D. Create a New Spanned Volume by using Disk 1 and Disk 2.

Correct Answer: C

QUESTION 4

You manage a Web server named Server1 that runs Windows Server 2008 R2. Server1 has the FTP Server role service installed.

You need to manage the FTP server settings on Server1.

Which tool should you use?

A. System Configuration

B. Performance Monitor

C. Internet Information Services (IIS) Manager

D. Local Security Policy

E. Security Configuration Wizard (SCW)

F. Ftp

G. Telnet

H. Component Services

I. Services

J. Windows Firewall

K. Iisreset

L. Internet Information Services (IIS) 6.0 Manager

Correct Answer: C

Ref: http://technet.microsoft.com/en-us/library/dd722761(WS.10).aspx http://support.orcsweb.com/KB/a338/create-an-iis-75-ftp-site-windows-server-2008-r2.aspx

QUESTION 5

You have a Remote Desktop Services farm that contains several Remote Desktop Session Host Servers.

You need to configure one of the Remote Desktop Session Host Servers as a dedicated redirector.

You configure the appropriate DNS records.

What should you do next?

A. From Remote Desktop Session Host Configuration, set the licensing mode to per user.

B. From Remote Desktop Session Host Configuration, set the licensing mode to per device.

C. From Remote Desktop Session Host Configuration, change the relative weight of the server to 50.

D. From Remote Desktop Session Host Configuration, configure the server to deny new user logons.

Correct Answer: D

To configure dedicated redirectors, you must do the following:

1.

Create DNS round robin entries for the terminal servers that you want to use as dedicated redirectors. When you do so, you must map the IP address of each terminal server that you want to use as a dedicated redirector to the terminal server farm name in DNS. (The farm name is the virtual name that clients use to connect to the terminal server farm.) The farm name must not match an existing server name in Active Directory Domain Services (AD DS).

2.

Configure the terminal servers that you want to use as dedicated redirectors to deny new user logon requests. Source: http://technet.microsoft.com/en-us/library/ff519163(WS.10).aspx
