Following Questions and Answers are all new published by Microsoft Official Exam Center

QUESTION 1

You need to recommend changes to Web1 to ensure that server backups can be performed remotely from Backup1.

Which two changes should you include in the recommendation? (Each correct answer presents part of the solution. Choose two.)

A. Install Windows PowerShell.

B. Install Windows Server Backup.

C. Modify the Windows Firewall settings.

D. Enable the IIS Management Service feature.

Correct Answer: BC

QUESTION 2

You need to recommend changes to the software deployment process that meet the company\\'s technical requirements. What should you include in the recommendation?

A. BranchCache in Distributed Cache mode

B. BranchCache in Hosted Cache mode

C. domain-based Distributed File System (DFS)

D. standalone Distributed File System (DFS)

Correct Answer: C

Software is installed and managed from a central location, so regardless of where a user is in the network the share for the installation files should appear to be the same, this is done using DFS Namespaces. There is one AD Domain and each Office also has 2 DCs so you can add the updated files in the HQ and then use DFS replication to replicate the new files to the branch namespace servers Distributed File System (DFS) Namespaces and DFS Replication offer simplified, highly-available access to files, load sharing, and WAN-friendly replication. In the Windows Server?2003 R2 operating system, Microsoft revised and renamed DFS Namespaces (formerly called DFS), replaced the Distributed File System snap-in with the DFS Management snap-in, and introduced the new DFS Replication feature. In the Windows Server-2008 operating system, Microsoft added the Windows Server 2008 mode of domain-based namespaces and added a number of usability and performance improvements.

What does Distributed File System (DFS) do?

The Distributed File System (DFS) technologies offer wide area network (WAN)-friendly replication as well as simplified, highly-available access to geographically dispersed files. The two technologies in DFS are the following:

DFS Namespaces. Enables you to group shared folders that are located on different servers into one or more logically structured namespaces. Each namespace appears to users as a single shared folder with a series of subfolders. This structure increases availability and automatically connects users to shared folders in the same Active Directory Domain Services site, when available, instead of routing them over WAN connections.

DFS Replication. DFS Replication is an efficient, multiple-master replication engine that you can use to keep folders synchronized between servers across limited bandwidth network connections. It replaces the File Replication Service (FRS) as the replication engine for DFS Namespaces, as well as for replicating the AD DS SYSVOL folder in domains that use the Windows Server 2008 domain functional level.

in respect to answers A or B these may possibly work but this test http://www.sustainableit.co.za/wp-content/uploads/downloads/2010/09/Is_BranchCache_right_for_software_distribution.pdf would suggest its not the most efficient solution.

QUESTION 3

You need to ensure that Web1, Web2, and Web3 download updates from WSUS1.

What should you do?

A. Modify the Default Domain Policy Group Policy object (GPO).

B. Modify the local computer policy on Web1, Web2, and Web3.

C. Import a security policy template toWeb1, Web2, and Web3.

D. Create a service location (SRV) record in the _msdcs.graphicsdesigninstitute.com DNS zone.

Correct Answer: B

Servers belong to a work group so WSUS policy cant be applied using AD GPO. but the local security policy can be modified to point to the WSUS server

QUESTION 4

You need to recommend a backup solution for the file servers that supports the company\\'s planned changes. What should you include in the recommendation?

A. File Server Resource Manager (FSRM)

B. Microsoft System Center Data Protection Manager

C. Windows Server Backup

D. Windows Storage Server 2008

Correct Answer: B

http://technet.microsoft.com/en-us/library/ff399260.aspx

What is Data Protection Manager?

Microsoft System Center Data Protection Manager (DPM) 2010 is a member of the Microsoft System Center family of management products, designed to help IT professionals manage their Windows environment. DPM provides Windows backup and recovery--delivering seamless data protection for Microsoft application and file servers by using integrated disk and tape media. DPM performs replication, synchronization, and recovery point creation to provide reliable protection and rapid recovery of data for both system administrators and endusers.

QUESTION 5

You need to recommend a solution for promoting the RODC in the new branch office. What should you include in the recommendations?

A. Implement the Windows Search service and implement a custom iFilter.

B. Implement File Server Resource Manager (FSRM) and configure file classifications.

C. Implement Microsoft SharePoint Foundation 2010 and create a custom workflow.

D. Implement a Distributed File System (DFS) namespace and configure folder targets.

Correct Answer: B

http://technet.microsoft.com/en-us/library/ee344836%28WS.10%29.aspx

What is the File Classification Infrastructure?

The Windows Server 2008 R2 File Classification Infrastructure (FCI) automates classification processes so that you can manage your data more effectively. You can save money and reduce risk by storing and retaining files based on their business value or impact. The built-in solution for file classification provides expiration, custom tasks, and reporting. The extensible infrastructure enables you to meet additional customer classification needs by building rich end-to-end classification solutions that are built on the classification foundation of Windows Server in a consistent and supported way and within the existing Windows file serving platforms.
