## QUESTION 1

Your network contains two servers. The servers are configured as shown in the following table

All client computers run the 32-bit version of Windows Vista.

Your company purchases a new sales application named SalesAppl. SalesAppl is a 64-bit application. SalesAppl is associated with the .abc file extension.

You need to ensure that when users in the sales department open files that have the .abc file extension, SalesAppl automatically opens.

What should you do?

To answer, move the appropriate actions from the Possible Actions list to the Necessary Actions area and arrange them in the correct order.

Select and Place:

Possible Actions

- Install SalesAppl on Server1.
- Create a RemoteApp program on Server1.
- Create a Remote Desktop Connection (.rdp) file.
- Create a Windows Installer package for SalesAppl.
- Deploy the Windows Installer package by using a Group Policy object (GPO).
- Deploy the Remote Desktop Connection (.rdp) file by using a Group Policy object (GPO).

Necessary Actions

Reset Instructions

Correct Answer:

Possible Actions

- Create a Windows Installer package for SalesAppl.
- Deploy the Windows Installer package by using a Group Policy object (GPO).
- Deploy the Remote Desktop Connection (.rdp) file by using a Group Policy object (GPO).

Necessary Actions

- Install SalesAppl on Server1.
- Create a RemoteApp program on Server1.
- Create a Remote Desktop Connection (.rdp) file.
- Deploy the Remote Desktop Connection (.rdp) file by using a Group Policy object (GPO).

## QUESTION 2

You are evaluating whether to purchase Windows Server 2008 R2 Service Pack 1 (SP1).

Several weeks ago, you installed Windows Server 2008 R2 SP1 on a server. During the installation, you did not enter a product key.

You need to identify how many days remain until the license status of the server will change to Unlicensed.

Which tool should you use?

- A. Slmgr.vbs
- B. Action Center
- C. Wevutil.exe
- D. System Configuration

Correct Answer: A

slmgr.vbs -dli

Display license information.

By default, /dli displays the license information for the installed active Windows edition. Specifying the [Activation ID] parameter displays the license information for the specified edition associated with that Activation ID. Specifying the [All] as

the parameter will display all applicable installed products\\' license information. This operation does not require elevated privileges.

---

## QUESTION 3

Your network contains a Web server named Server1 that runs Windows Server 2008 R2.

You need to ensure that Server1 only processes HTTP URLs that are shorter than 2,048 bytes. Which feature should you configure from Internet Information Services (IIS) Manager?

- A. Authentication
- B. Authorization Rules
- C. Connection Strings
- D. Default Document
- E. Error Pages
- F. Feature Delegation
- G. HTTP Redirect

H. HTTP Response Headers

I. IIS Manager Permissions

J. IP Address and Domain Restrictions

K. ISAPI and CGI Restrictions

L. ISAPI Filters

M. Management Service

N. Request Filtering

Correct Answer: N

---

#### QUESTION 4

Your network contains two standalone servers named Server1 and Server2. Server1 has Microsoft SQL Server 2008 Reporting Services installed. Server2 has the SMTP Server feature installed.

You configure the Reporting Services on Server1 to send reports by using Server2.

You need to ensure that Server2 sends the reports.

What should you do on Server2?

A. Configure a smart host

B. Configure TLS encryption

C. Modify the Relay restrictions settings

D. Modify the Connection control settings

Correct Answer: C

To change the SMTP Virtual Server Relay Restrictions, one needs to use the Internet Information Servers (IIS) 6.0 Manager. This is an IIS Role Service that needs to be installed (IIS 6 Management Console)

---

#### QUESTION 5

You deploy a Windows Server 2008 R2 VPN server behind a firewall. Remote users connect to the VPN by using portable computers that run Windows 7.

The firewall is configured to allow only secured Web communications.

You need to enable remote users to connect as securely as possible. You must achieve this goal without opening any additional ports on the firewall.

What should you do?

A. Create an SSTP VPN connection.

- B. Creates a PPTP VPN connection.
- C. Create an L2TP VPN connection.
- D. Create an IPsec tunnel.

Correct Answer: A

Explanation: Secure Socket Tunneling Protocol (SSTP) is a tunneling protocol that uses the HTTPS protocol over TCP port 443 to pass traffic through firewalls and Web proxies that might block PPTP and L2TP/IPsec traffic. SSTP provides a mechanism to encapsulate PPP traffic over the Secure Sockets Layer (SSL) channel of the HTTPS protocol. The use of PPP allows support for strong authentication methods, such as EAP-TLS. SSL provides transport-level security with enhanced key negotiation, encryption, and integrity checking. Although it is closely related to SSL, a direct comparison can not be made between SSL and SSTP as SSTP is only a tunneling protocol unlike SSL. Many reasons exist for choosing SSL and not IPsec as the basis for SSTP. IPsec is directed at supporting site- to- site VPN connectivity and thus SSL was a better base for SSTP development, as it supports roaming.
