QUESTION 1

You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed.

You need to ensure that you can restore a mailbox deleted from a mailbox database if the mailbox was deleted up to six months earlier. The solution must not require a database backup.

What should you do?

- A. From the properties of the mailbox database, modify the maintenance schedule.
- B. From the properties of a Mailbox server, modify the System Settings.
- C. From the properties of the mailbox, enable single item recovery.
- D. From the Exchange Management Shell, run the New-MailboxSearch cmdlet.
- E. Create a managed custom folder and managed content settings.
- F. From the properties of the mailbox, enable retention hold.
- G. From the properties of the mailbox, enable litigation hold.
- H. From the Exchange Management Shell, run the Export-Mailbox cmdlet.
- I. From the properties of the mailbox database, select the This database can be overwritten by a restore check box.
- J. Create a retention policy and a retention tag.
- K. From the properties of the mailbox database, modify the Deletion Settings.
- L. From the Exchange Management Shell, run the New-MailboxExportRequest cmdlet.
- M. From the Exchange Management Shell, run Set-MailboxDatabase -DumpsterStatistics \$true.

Correct Answer: K

Conflicting answers on this one, for me its straight forward, deletion settings on the Limits tab for mailbox databases.

QUESTION 2

You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed.

You need to identify why a remote SMTP server rejects e-mail sent from the organization.

What should you do?

- A. Modify the connectivity log settings on the Transport server, and then review the connectivity logs.
- B. Modify the message tracking settings on the Transport server, and then review the message tracking logs.
- C. Modify the diagnostic logging level on the MExchangeTransportService object, and then review the Application event log.
- D. Modify the protocol logging level on the Send connectors, and then review the protocol logs.

Correct Answer: D

Protocol logging records the SMTP conversations that occur between e-mail servers as part of message delivery. These SMTP conversations occur on Send connectors and Receive connectors configured on servers running Microsoft Exchange Server 2010 that have the Hub Transport server role or the Edge Transport server role installed. You can use protocol logging to diagnose mail flow problems. <http://technet.microsoft.com/en-us/library/bb124531.aspx>

QUESTION 3

You have two Exchange Server 2010 Mailbox servers named Server1 and Server2. You need to move a user's mailbox from Server1 to Server2. Your solution must minimize downtime for the user. Which cmdlet should you run?

- A. Movemailbox.

- B. Export-Mailbox.
- C. Set-MoveRequest.
- D. New-MoveRequest.

Correct Answer: D

QUESTION 4

Your company has offices in New York and Montreal. Each office is configured as an Active Directory site.

You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The organization contains five servers. The servers are configured as shown in the following table.

Server name	Server role	Server site
Server1	Client Access Hub Transport	New York
Server2	Client Access Hub Transport	Montreal
Server3	Mailbox	New York
Server4	Mailbox	Montreal
Server5	Edge Transport	New York

Each Mailbox server contains two mailbox databases. All users have a mailbox on their local Mailbox server.

Server3 contains a public folder database.

You create a new offline address book (OAB) for each office.

You need to ensure that the users in each office download the OAB created for their respective office.

What should you modify?

- A. An Attachment Filter agent
- B. The Autodiscover DNS record
- C. The mailbox features
- D. The EWS virtual directory
- E. The email address policy
- F. The Client Access array
- G. The Exchange ActiveSync mailbox policy
- H. The mailbox databases
- I. The Outlook Web App mailbox policy

Correct Answer: H

QUESTION 5

You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed.

You need to ensure that an administrator can recover hard-deleted email messages from a user's mailbox until the deleted item retention period has elapsed. All expired email messages must be deleted when the retention period has elapsed.

What should you do?

- A. From the Exchange Management Shell, run Set-MailboxDatabase -DumpsterStatistics \$true.
- B. From the properties of the mailbox database, select the This database can be overwritten by a restore check box.
- C. From the Exchange Management Shell, run the New-MailboxSearch cmdlet.
- D. From the Exchange Management Shell, run the New-MailboxExportRequest cmdlet.
- E. From the properties of the mailbox database, modify the Deletion Settings.
- F. From the Exchange Management Shell, enable single item recovery.
- G. Create a managed custom folder and managed content setting.
- H. From the properties of a Mailbox server, modify the System Settings.
- I. From the Exchange Management Shell, run the Export-Mailbox cmdlet.
- J. From the properties of the mailbox, enable retention hold.
- K. Create a retention policy and a retention tag.
- L. From the properties of the mailbox, enable litigation hold.
- M. From the properties of the mailbox database, modify the maintenance schedule.

Correct Answer: F

This is not litigation hold as the expired messages must be deleted when the retention period has elapsed.

Litigation hold would keep them indefinitely.
