QUESTION 1

A corporate environment includes Exchange Server 2010. The Exchange Server environment includes two Client Access servers that are load balanced by a hardware load balancer. The load balancer is configured to perform SSL offloading

only when users access Outlook Web App (OWA).

You need to recommend a solution for ensuring that passwords are never transmitted in clear text when users access OWA.

What should you recommend?

- A. Modify the internal URI on the Client Access servers.
- B. Enable integrated Windows authentication.
- C. Modify the external URI on the Client Access servers.
- D. Enable forms-based authentication.

Correct Answer: B

QUESTION 2

You are the messaging professional for an engineering firm. The firm has considered deploying Exchange 2010 into their environment. You need to determine the Mailbox Server requirements. Which items are included in the hardware sizing process? Choose all that apply. Choose 3

- A. Create an Exchange configuration
- B. Identify Exchange public folder permissions
- C. Validate the Exchange configuration
- D. Identify Exchange usage profile

Correct Answer: ACD

The hardware sizing process is: identify Exchange usage profile, create an Exchange configuration and validate the Exchange configuration.

QUESTION 3

You have an Exchange Server 2010 organization. You plan to delegate Exchange administrative rights to some users in the organization. You need to recommend a solution that tracks all changes made to the Exchange organization. What should you include in the solution?

- A. administrator audit logging
- B. circular logging

- C. diagnostic logging
- D. Windows Security Auditing

Correct Answer: A

QUESTION 4

You have an Exchange Server 2003 organization. All users connect to their mailboxes by using Microsoft Office Outlook.

You start to transition the organization to new Exchange Server 2010 servers. The new servers are on a secured subnet that is separated by a firewall. You will move half of the mailboxes to the new servers.

Client Access servers and Mailbox servers are on the secured subnet. Client computers on the network can access the Client Access servers.

You need to recommend a solution that allows users to connect to Public Folders by using Outlook or Outlook Web App (OWA).

- A. Public Folder referrals and forms-based authentication
- B. Public Folder referrals and HTTP connections to the Mailbox servers
- C. Public Folder replicas and MAPI connections to the Mailbox servers
- D. Public Folder replicas and WebReady Document Viewing

Correct Answer: C

QUESTION 5

A corporate environment includes Exchange Server 2010. Client computers run Windows 7 and Microsoft Outlook 2010. The client computers are joined to an Active Directory Domain Services (AD DS) domain.

You need to recommend an email security solution that meets the following requirements:

Protect email messages from being read by unauthorized users. Protect attachments, including text files, PDF files, and XPS files.

Encrypt selected email messages when they are sent.

What should you recommend?

- A. message classification
- B. Mutual Transport Layer Security (MTLS)
- C. Secure/Multipurpose Internet Mail Extensions (S/MIME)
- D. Active Directory Rights Management Services (AD RMS)

Correct Answer: C
